> You seemed confused.

No, I am not confused. If I know the target countries operating priveleges, then I know where to look for them. And should the French amateurs try to contact me out of band on 6M, I wouldn't work them because I would know they were out of band.

I haven't the slightest amount of confusion about this.

I don't find my license class embarassing, nor being and chasing DX with
that license embarassing.

I find your unethical DXing embarassing. Typical ugly American abroad.

> > > > Part 97 doesn't say I cant' be DX or work DX

> I could have sworn that it was on the list you trotted out.

Are you saying that Somalia cannot be a DX country because it is not a U.S.
posession?

FYI, the USA can be a DX country if you're in the Falkland Islands.

> > > > > > Are you saying that my DX QSOs aren't any good because I didn't
work

I cannot be responsible for those that cannot handle old ZIP-format file compression or JPG-format image viewing. Those are in very common use by millions of computer users worldwide.

For PC users I would recommend at least a 32 MB RAM on their platform. Internet Explorer 4.0 and above will handle the JPG-format files that I sent and also display them. There are a number of JPG-format viewers available for free download from many different sites on the Internet. I recommend a simple Search for those, available on many ISPs such as AOL (on AOL click on "Internet" on tool bar, then "Search the Internet" on the pull-down menu).

It is realized that not all who access this newsgroup have PCs or computers with relatively-modern software installations ("relatively-modern" defined as that available within the last five years). For that reason I have made a reduced-resolution image set at 150 DPI (from the 300 DPI original scan), packed them in ZIP-format compression, sent that to the requestor as e-mail attachment file "Attach L 150." Those are the same front and back license form scans as described before. That file (about 630 KB in size) will be sent without accompanying message text to the requestor in private e-mail.

Neither that file nor any previously-sent file contain any computer viruses detectable by Norton Virus Scanning software. Thank you all for your patience in this trying matter.

I'd just as soon use a beam antenna with the kilowatt linear to
aim more signal towards the DX. Less FR to most of the neighbors.

If every state was a DXCC entity, then if I had a WAS award
I'd be halfway home to a DXCC. Yeah....

Even if that's true, why would it be significant? K2UNK is relating his
personal experiences aboard US Navy ships in the 1966-1970 time period. I think

he is being honest about his observations.

Were you ever in the US Navy?

> Further, you haven't done much research in the matter either.

How do you know?

>I'm sorry, but how did you derive "...heavily dependent on morse?"

From the personal experiences of US Navy personnel serving on US Navy ships in
the time period cited.

>You saw
>one code key on a photo of a radio bench and enlarged that?!?

Nope. US Navy radio operators on various ships reported on the equipment and
techniques in use, just as Bill did.

Were you ever in the US Navy?
>
>Had you done enough research you would have found out that the
>USN was using RTTY both in-clear and on-line-encrypted in 1940
>on cruisers and heavier ships.

I knew that already. The discussion was about the use of Morse, not RTTY. And
while RTTY was used on those ships in that time period, so was Morse.

The US Navy consists of more than cruisers and heavier ships. What mode do you
think was used by US Navy submarines in WW2?
>
>>Some interesting points:

>
That's nice.

When did the various military services stop requiring Morse training of their
radio operators?

>The major communications mode of US military land forces in the
>1950s to time-now period is voice. Second mode is data/(TTY-like). Third
>mode is imagery. Since about 1994 the US military has been advancing
>the "digital battlefield" concept...and succeeding.

That's nice.

How does any of that relate to your demands to the FCC for an age requirement for a ham license?

>>- The FCC of the 1960s not only supported Morse code testing for all ham
>>licenses but actually raised the standards by requiring 20 wpm instead of 13
>>wpm for full-privileges after November of 1968.
>
>Unrelated comparison but not unexpected in here.

No, it's very relevant. FCC knew what the military was doing, but did not see those changes as having any bearing on the amateur radio service.
>
>The FCC no doubt was heavily lobbied then by the ARRL for that
>"incentive" plan from the more-influential ARRL members who were either
>retired (and wanting to strut their stuff with nice titles and status) or had
>morsemanship as a personal favorite.

INCORRECT. Pure wishful speculation on your part, driven by your ignorance and anti-ARRL/anti-Morse code bias, bigotry and prejudice.

>SSB voice was coming on strong on HF.

The use of SSB by hams had been long promoted by the ARRL leadership and others. This started in earnest in the late 1940s. As examples of how ARRL promoted the use of SSB, there was a regular column in QST as early as 1948 ("On The Air With Single Sideband") and an in-depth publication on SSB for the radio amateur. AM and CW got no such special promotion.
>
>More and more ready-manufactured equipment was becoming
>available and behind-panel, hands-on work on the hardware would begin
>a downturn that would continue until now. The emphasis was on
>operating. The solid-state era was beginning in earnest and would
>take over nearly all active electronics functions. New methods of
>technology were being introduced.

This part is true.

>The old methods known by the
>old-timers who began before or during WW2 were being replaced by
>new technology.

That's true, also.

>The old-timers wanted their skills-while-young to
>be "worth something" so they pushed for morsemanship as a
>criteria for "excellence" in amateurism.

Obviously some did that. But not the ARRL leadership.

>
>Did the "FCC" push for the "incentive plan?" No.

INCORRECT. What is your source for this? Good historians consult as much
research material as is possible,
from as many sources as possible. Bad historians limit their research and
interject their own personal desires into their histories. You are being a bad
historian.

FCC wanted incentive licensing.

>The ARRL was doing the pushing.

INCORRECT. What is your source for this? Good historians consult as much
research material as is possible,
from as many sources as possible. Bad historians limit their research and
interject their own personal desires into their histories. You are being a bad
historian.

ARRL was responding to FCC pronouncements in 1963.

>The FCC probably didn't much care one way or the
>other since it was facing a great heaping amount of new radio services
>using ever-increasing technology.

INCORRECT. What is your source for this? Good historians consult as much
research material as is possible,
from as many sources as possible. Bad historians limit their research and
interject their own personal desires into their histories. You are being a bad
historian. You really need to do some research on that bit of history.

>Regardless of the political phrasing
>concerning "national importance" of amateur radio, it was still a hobby
>activity. It was not broadcasting, not a common carrier, not inter-
>connected with foreign telecommunications, not directly related to
>public safety, not related to business activities. It was avocational.

Do you think the public service contributions of amateur radio are not
important? How about during the Alaska Earthquake, which happened about that
time?

>Important to individuals, yes, but each station did not directly tie in
>with national needs. But, the FCC must listen to its citizens so it did
>what amounted to a compromise in the 1960s...it listened to the only
>large amateur radio membership organization of the time, the ARRL.

INCORRECT. What is your source for this? Good historians consult as much
research material as is possible,
from as many sources as possible. Bad historians limit their research and
interject their own personal desires into their histories. You are being a bad
historian.

>There was nothing at all approaching the level of individual citizen
>contact such as possible by the Internet now and back to a decade
>ago.

INCORRECT. While the immediacy of email and websites did not exist then, all
this did was to lengthen the time span required. The percentage of interested

parties commenting was actually greater back then than for 98-143.

>The FCC effectively rubber-stamped the ARRL proposal and the ARRL
>proceded to take the credit for it ever since...until the 98-143 NPRM
>and eventual restructuring of license classes and testing. There can
>be no mistake that the ARRL took the credit for the "incentive plan"
>and it is pointless to now "blame" the plan on the FCC.

INCORRECT. What is your source for this? Good historians consult as much research material as is possible,
from as many sources as possible. Bad historians limit their research and interject their own personal desires into their histories. You are being a bad historian.

Here's what REALLY happened. This is a short account, but the essential details are there. Show us, if you can, where any of the following facts are inaccurate.

In 1963, the FCC expressed concern that so few amateurs had aspired to the Amateur Extra class license. The FCC asked for proposals on how to restructure the ARS to provide more "incentive" for hams to attain higher license grades.

The ARRL leadership responded in 1963 with a simple proposal:

1) Reopen the Advanced Class license to new applicants.
2) Require an Advanced or Extra Class license to operate voice on the 75, 40, 20 and 15 meter bands.

Note how simple this proposal was. Note that it did not raise the level of code testing required for all amateur privileges - just the written test requirements. FCC did not "rubber stamp" it, however. They gave it an RM number (RM-499) and asked for more ideas.

FCC got many proposals from the amateur radio community. Some came from individuals, some from other amateur radio groups. At least ten (10) of these proposals were taken seriously enough by the FCC to earn RM numbers (RM-378, 455, 470, 474, 480, 481, 516, 517, 538, 577). It was from these proposals that the idea of subbands-by-license-class and other details came about.

Commentary on the various proposals resulted in an FCC NPRM on March 31, 1965 called Docket 15928. Besides subbands-by-license class, this NPRM proposed complex callsign rules, demoting old Advanceds to General and creating a new "Amateur First" class of license, with a 16 wpm code test (!) and a new written test. This would have made four code test speeds - 5, 13, 16, and 20 wpm.

The demotion of Advanceds and the new "Amateur First" license were vigorously opposed by the ARRL and other amateur radio groups and individuals, and were eventually dropped from the FCC NPRM. FCC announced its final version in the fall of 1967, and it became effective in November of 1968.

It should be noted that the FCC received over 1700 formal comments on Docket 15928, back when the US amateur population was about 40% of what it is today. This figure does not include those whose comments were part of RM-499 or other proposals.

FCC wanted incentive licensing. FCC did not "rubber stamp" anyone's proposal. The whole process was public and open to anyone wanting to comment or propose different ideas.

And there was no talk of an age requirement for any amateur license.

Lenover21's account of how "incentive licensing" came to be is in error. It borders on being intellectually dishonest.

And when you state that every state in the USA is a DXCC entity, you have conclusively shown that the joke is you. BTW, there are virtually no amateurs running in excess of the authorized 1.5 KW for the simple reason that by giving your call sign, you are quite easily traced. No call sign, well, no ticky no washie. Also, many (likely most) amateurs DON'T EVEN OWN AN AMP! The guys I know personally around here are simply using HF transceivers WITHOUT an amp. My guess is that there exists a much higher percentage of CBers with amps (illegal) than the percentage of hams with amps (I am talking percentages here - likely there are more CBers with amps in the USA than there are amateurs in the whole world).

Phil, a good friend of mine owns a construction business. He was at a shop when a guy came in and wanted his cell phones cloned. The shop offered to do it for him while he waited (sure, that just not be too bright). Some quick checking and everything was ready inside of 20 minutes. Yep, the police showed up. The guy did not pass go nor did he collect $200.00.

>so ineffective when working on ARRL stuff.

Dennis, here is another item to consider -

David Sumner, K1ZZ, is given as Trustee for three radio clubs:

W1AW ARRL Hq Operators Club

NU1AW International Radio Amateur Union (previously KB1BUY)

K1ZD Residence Radio Club (previously WA1RDH)

The above may be verified with www.qrz.com

NU1AW is a Vanity callsign. Note the similarity of of the last two letters with W1AW. The given mailing address is PO Box 310905, Newington, CT. W1AW given mailing address is 225 Main St, Newington, CT.

The third "club" is interesting, the "Residence Radio Club." Is that residence so big or the residents so numerous that a club is needed? :-)

This is not a forum for Consumer Reports magazine. If you wish to discuss
Consumers Union or their magazine, I suggest you access the links provided
by Paul Schleck.

>> Is someone "winning" while others are "losing" debates? :-)
>
>No, nobody is winning. But you're losing because you're making no real
>argument.

That statement is just your personal opinion. Nothing is "lost." Your
statement is just an attempt to paint another in bad colors. Bad form.

>Is Jim a member of your family? Was the form of address intended to be
>affectionate?

"Jim?" Which "Jim?" The only header information is "N2EY," not a person.

Go back a couple years and determine if "K4YZ" is attempting to be
"affectionate" with his form of address to me.

>No, it's not okay. But what has that got to do with your use of personal
>attack as a way of ducking the hard questions?

Nobody is "ducking 'hard' questions." You have been attempting to misdirect by questions on Consumers Union and omission of some lengthy personal attack ploys by others as applying to me.

Explain again how using "Jimmie" can be construed as a "personal attack."

>I'm not painting, Len, I'm just pointing out the features of the image
>you're painting.

No, Jon, you are posting what you post out of various kinds of personal pique/irritation/discomfort on negative criticism of the ARRL. That makes your vision astigmatic, distorted. It might even be considered "mono-path" as with a "one-way" mirror. I suggest a visit to an opthalmologist to have your vision checked.

>Of course not. You are under no legal obligation to answer questions posed
>here. But when you accuse others of dishonesty, you have an ethical
>obligation to back up the accusations with specific evidence.

In another thread I made mention of scanning a license form of mine and sending e-mail attachments to requesters. In yet another thread opened by one little barking dog, he demanded to see it. I sent it. In fact, I have now sent two of them, a second at smaller resolution and file size. That individual said he deleted them. I complied with the request. Others would consider that ethical. What I got in return was more personal insults in public. Do you consider such things as "ethical?"

>I'm just
>attempting to get you to live up to that ethical obligation. If you prefer
>to hide behind legalisms, so be it.

I'm not a legal expert nor do I pretend to be one. This is not a question of "law."

>> The ARRL says it is "honest." The proof of such "honesty" cannot be
>> more of the same. :-)
>
>Ignoring the presented evidence isn't the same as there not being any.

Where is the "evidence" that the ARRL is honest in every claim? All that anyone can see is statements made by the ARRL, their officers and staff, and ARRL members that they are "honest." In any other venue those would be called CLAIMS, not "evidence."

>Oh? Who, specifically? In what way, and using what evidence? Claiming that
>a lot of people agree with you is an old, weak rhetorical trick.

Claiming "honesty" is an old, weak political rhetoric trick. When coupled with omission of certain other things to emphasize an organization "good works," it is called SPIN.

>Unless
>you can show where these supposed "many, many" challenges have been made,
>you're just blowing smoke.

Propagandists "blow smoke" all the time.

>> Do you want the ARRL to continue to talk down to newcomers?]
>
>It doesn't.

In many cases it does. For the most part the tone of the ARRL seems to
talk down to many as if "radio" were some new technology and mainly
known only to amateurs. That's normally called "patronizing." :-)

Not only that, the ARRL pretends to be some sort of governmental
surrogate (too strong a word, perhaps) or at least an "assistant to
government" in amateur radio regulation. They claim freely elected
"representatives" which are supposed to be "for all amateurs" yet they
are a private organization not governed by federal laws for elected
officials of government. That leads to some viewing the ARRL as an
Orwellian "Big Brother" (from George Orwell's famous/notorious
novel "1984").

>> Do you want
>> the ARRL to lead everyone by a parental hand as if they were all
>> ignorant lambs?
>
>It doesn't.

"Now You're Talking."
:-)

>> Do you want the ARRL to appear as some superior judge
>> and arbiter of behavior when the evidence is clear that they are simply
>> "representing" the thoughts of long- time members thinking their way is
>> the "only" way?
>
>What evidence, specifically?

Patronization is the most blatant aspect. The ARRL implies that it knows
what is best for amateur radio but the actual fact seems to be that the ARRL
"knows what is best" only for those higher-up in the ARRL opinion and
policy determining levels.

Arrogance is not a positive attribute to any organization, yet a common
fault with the ARRL's presentation of itself is just that to many. One
example is their continuing emphasis on morse code skill as the top
attribute for all radio amateurs, a throwback to very early days when
on-off keying was the only practical communications mode for radio
amateurs. Such is out of place in this new millennium of advancing
technology, modes, and methods. Observe the construction articles on
HF output transmitters in QEX where, seemingly, there must always be
some mention of "CW capability" regardless of the non-CW mode
design of the transmitter...or the abundance of such transmitter articles

that do feature "CW" (on-off keyed CW).

>So, let's see how you think the world should work: When someone is accused
>of dishonesty, it's not up to the accuser to prove the charge, it's up to
>the accused to prove innocence. And you accuse ME of Torquemadan
>tendencies!

I don't think the "world" should work as I say it should. I leave that to elected officials.

I stated my OPINIONS on the ARRL and you (angrily?) DEMANDED evidence of wrong-doing! :-)

It would seem that the sequel to the infamous Spanish Inquisition is in full bloom, again, but in a different venue. :-)

>ARRL policy is judged by its members. If ARRL policy doesn't hew to the
>members' interests the members can "vote with their feet." But they don't.
>So, please explain why ARRL members remain as members when, in your
>opinion, ARRL is acting against their best interests.

I can't explain what I didn't write.

I have stated a numerical fact several times, to wit: "Membership in the ARRL is less than a quarter of all licensed US radio amateurs." That numerical fact has been true for several years.

I have stated that my opinion of many ARRL members to be that of Believers, believing in the all-goodness of the ARRL, some to the point of such belief to be pseudo-religious. It is axiomatic that Believers cannot be dissuaded from their beliefs...without incurring something akin to open warfare. :-)

>It's easy to characterize statements you disagree with as politicl spin.

A Republican may disagree with a Democrat's political spin and call it that while a Democrat may disagree with a Republican's political spin and call it that. Both are correct. :-)

The ARRL is a also a political organization. They use elements of propaganda to continue their existence. Propaganda emphasizing themselves and positive attributes, then omitting de-emphasizing statements and negative attributes is pure SPIN. :-)

Yes, it is easy to characterize!

>It's more difficult to challenge the statements with substantive
>discussion.

Oh, my! "Substantive discussion" on pseudo-religions? Sorry, this isn't a theological seminary group or a rabbinical institute forum.

>But try taking the harder route if you expect to make a
>convincing argument.

I have stated my personal OPINIONS. You wish to put such opinions
"on trial" by demanding "evidence" of their "correctness." [such is the
reason for naming this thread the "Inquisition."]

Very well, where is the EVIDENCE that the ARRL is "honest" in
all its statements, claims, and policies?

Is this "evidence" contained in "sworn statements?" [believe us or we
will swear at you? :-)]

>Again, where are the specifics? Just claiming that "they're being mean to
>me" doesn't have much substance.

I've never claimed that the ARRL "was being mean to me." :-)

I once mentioned a written, USPS-delivered letter exchange with a
now-deceased President of the ARRL. The "reply" was a form-letter
format response consisting of -

1. Join the ARRL and become a participating, voting member.

2. A then-new publication on the market "Now You're Talking"
would "explain" radio to me (this was some time after my
military HF radio experience and grant of a First Phone, which
had been explained by my).

That was concerning my comments (in business-courtesy format) on
the code test regulation issue for GETTING INTO amateur radio. So,
the form-letter response took the arrogant stance of my having to go
through the process FIRST, becoming licensed in the OLD way, in
order to become a "participating, voting member." At that time (prior
to 1990) the ARRL position and policy obviously went only with the
membership who had already gone through the code test process.
Where was the openness on considering revised regulations? Where
was the consideration of newcomers not yet licensed? It wasn't there.
Yet the ARRL had considerable influence on FCC decisions regarding
amateur radio regulations in the pre-1990 time...so the ARRL was
certainly attempting to keep federal regulations (which apply to all)
solely for the alleged wishes of its membership.

I won't go into the "suggestion" on "learning about radio" through
the new publication...when I was actively engaged in radio design as
a professional at the time. Perhaps that was just a gratuitous form-
letter response. It did not sit well at the time.

Form-letters are convenient for the secretarial staff. If written well,
they can save executives' much time and trouble. If applied poorly
they can be gratuitous insults-by-arrogant responses.

>> While minutes to board meetings are made public, they are made public by
>> the ARRL. The ARRL controls what is revealed. Others in here have
>> stated that BoD meetings have covered items not in public view.
>
>Specifics? Evidence? Why is it, Len, that your arguments are so often
>presented in terms of "(unidentified) others have said," with no citation

>of who, where and when? It leads one to suspect you're just making it all
>up.

Another staff member of the ARRL has admitted openly in here that some
ARRL meeting details were never included in publicly-released meeting
minutes or text.

I could get a number of licensed radio amateurs on a list for your damnation
but, ethically, I would have to get their consent for public disclosure. I
doubt
many of them are eager for a public trial in which they are charged with
heretical opinions against the League.

>SMs don't make ARRL policy, Len. If you're going to criticize an
>organization's structure, you really ought to first learn what it is.

It is what the ARRL says it is. The ARRL says so.

>> The "free election" is NOT anywhere close to the same sort of "free
>> election" as is done for elected government officials.
>
>Sure it is. In each case the electorate is restricted. In the case of
>governmental elections, it's restricted to the citizens of the
>jurisdiction the electoral office represents. Citizens of other

Election of officials in a PRIVATE organization is NOT under the
same laws as elected government officials. You want to IMPLY
that it is the "same" but it is not. [bad application of spin]

>Yet another groundless charge. Just repeating "ARRL is dishonest" doesn't
>convince anyone. Pony up some evidence.

Yet another groundless bench-pounding by an inquisitor. "Pony up some
evidence" that the ARRL is scrupulously honest in all its statements, claims,
policies. I stated my OPINIONS. Like them or not, they are my opinions.
Others hold the same opinions.

>"What the ARRL wants" is for the Amateur Radio Service to flourish. It's
>true that ARRL's activities aren't representative of anything except that.

It is my opinion that the ARRL is simply there to SURVIVE at this point,
for its leaders to continue exercising CONTROL over all of amateur radio
in the USA to the leaders' personal desires.

>Which explains why so many hams have aligned themselves with ARRL's
>activities.

That also explains why three times that "many" have NOT aligned
themselves with ARRL policies.

>They, too, want the ARS to flourish.

Or they want to continue regulations and policies in the old ways so that
they feel secure without having to learn new things, so that they can have
their status, rank, privileges preserved for showing their "superior"

accomplishments, so that they have an ability to control without being
held accountable for such control.

>Most of the comments were closer to ARRL's position than to the one
>finally adopted in the R&O.

There was only ONE such "summary," apparently an independent effort
which became part of the FCC public record. It had mistakes in it, partially
corrected in a follow-on document.

"Most" of those "most" comments were essentially form-letters stressing
individuals' tenure and personal desires for morse code testing. Quit
doing the necro-equine flagellation over sour wine of losing.

>> On 90-53, the NPRM for creation of the no-code-test Technician class
>> license, the ARRL's position on policy was essentially against it or for
>> forcing allocated operation well above 30 MHz. The ARRL lost and
>> refused to accept the FCC's own reason for elimination of the code test.
>
>Uh, the NCTs were restricted to operation above 30 MHz, Len.

The original ARRL position on 90-53 restricted "NCTs" to above
2 meters. Can it, Jon, that's an older horse beaten even more
severely so that a coroner's report is needed to identify it.

>This is funny! Len, the ARRL is part of the IARU. IARU is the mechanism by
>which ARRL and other national AR societies present the case of Amateur
>Radio in international matters, particularly HF allocations. When you see
>IARU doing things, you ARE seeing ARRL and it's sister socities in action.

Then why the dichotomy in public information?

>Nothing has been done? How do you suppose that realignment of the 7-MHz
>band got onto the agenda for WRC-03?

Explain why it failed to get into WARCs 81 through 99 and failed WRC-01.

That issue has been around for TWENTY THREE YEARS.

>How is it that the FCC's preliminary
>view on the issue, released for public comment last spring, called for a
>300-kHz-wide amateur primary allocation at 40m? Are you even aware that
>said preliminary view was formulated by an FCC-appointed advisory
>committee to which ARRL contributes and of which an ARRL employee is vice
>chairman? If you are unaware of all of those things then you are making
>comments about a topic about which you are woefully uninformed.

Walt Ireland. Yes, I'm "informed" enough to point out that, as the "scribe"
for IWG-6 he was quite (months) late on public minutes write-up. IWG-6
is presently (and still) looking for a replacement "scribe."

I'm well aware of ALL the action items in the USA Proposals for WRC-03.
Such are available to all with access to the FCC website and their
International

Bureau's sub-page on WRC-03. According to the US Proposal, the "reasons" given are those of the IARU, not the ARRL. Isn't that interesting...the IARU is an "international" organization while the ARRL is a USA-national one and the FCC chose the IARU comments to repeat.

Stuff it, Jon. You are trying to beat a horse that isn't dead which a lot of us
have already caught and featured.

>Until you present effective counter arguments instead of innuendo and
>misinformation, I'll stand by what I said.

Okay, so YOUR "counter arguments and innuendo and misinformation" is "correct" and your calling my opinion statements as "unethical" and "wrong." Sounds about right. :-)

>Bullets? You're shooting blanks, Len. You still haven't presented any
>evidence of dishonesty on the part of ARRL. Where is it?

You've been hit many times but are too numb to know you're wounded.

Show us the EVIDENCE that the ARRL is honest in all its statements, claims, and policies...and that it is worthy to be the Big Brother surrogate to the FCC.

>In short, you have NO evidence.

We can't continue this trial if you don't recognize evidence.

>Observation of what? Surely if you have observed something that gives
>grounds for skepticism you can cite it. I'm still waiting for you to do so.

I did. You refuse to see it.

>It's only because you lack any real argument that you keep trying to turn
>the discussion into a conflict of "belief systems." You haven't presented
>anything to give substance to your belief system.

I did. You refuse to see it.

>Meaning you have no answer to give. Just a string of baseless and
>unsupported accusations accompanied by assertions that there is no
>proof that the accusations aren't true.

I gave answers. You didn't like them. Tough.

>Anyody can make accusations without evidence. But it's unethical to do so.

You have made a number of accusations in here without evidence. Ergo, Jon Bloom is unethical.

>I'm just looking for evidence to support the chages you're making, Len. So
>far, you haven't presented any.

I've presented them, you can't - or won't - see them. I suggested a vision check with an MD earlier. I repeat that now.

>> This isn't about a Belief system in something organized by humans for
>> other humans. In such affairs it is possible to be a skeptic and not
>> considered a heretic.
>
>Yep. But if you want your skepticism to be accepted, you should present
>something to justify it.

I did. If you want this to be a true discussion, you have to go along with it.

You will not accept dissension or skeptics. QED.

>It's easy to find cases where ARRL has acted honestly, which supports the
>assertion that it does so act. You can't cite one example of where it has
>acted dishonestly.

I have. You refuse to accept it. QED.

>The objective evidence is that ARRL is honest.

Not enough. They constantly claim things, make statements, make policy
as if they are "leading" US amateur radio as the ARS "representative."
Spin, sin by omission, and they "represent" only the membership (which is
still less than a quarter of all US amateurs, a minority group).

>> Under the "baseline of truthfulness" description, ANY propaganda would
>> be truthful. It isn't.
>
>Nope. The "baseline of truthfulness" consists of those statements that can
>be verified. There are plenty of those from ARRL, as you well know.

Then you are defining "baseline of truthfulness" as being MORE SPIN.
Plenty of that as everyone well knows.

>Sure you do, you just prefer to ignore it because it doesn't conform to
>revealed truth as you see it.

Oh? And this is the New Epiphany?!?

>1) That there is no absolute proof that ARRL is honest. Such proof is
>impossible, of course.

Unacceptable. You cannot have it both ways...although you try.

If you cannot prove honesty, they neither can one prove dishonesty.

>2) That your belief in ARRL's dishonesty is akin to a religious faith.

So, atheists belong to a "church of nothing?!?" Agnostics belong to a
"church of somethingelse?!?" You are being ridiculous.

>I've made no allegations. I've only pointed out the fallacies in your
>belief system, the principal one being the complete lack of supporting
>evidence.

I don't have any "belief system" in a human membership organization.

I am a SKEPTIC. I don't believe in some "inherent honesty which is impossible to prove." NON-belief, Jon.

>No, religious debates aren't settled by "reasonably objective evaluation of
>the available facts." They're settled by schism.

Okay, so there are three times as many licensed radio amateurs in the USA who are "schismed" in non-ARRL-membership as those who are "unschismed." Is that "settled?" :-)

>But I don't approach the question of whether or not a person or an
>organization is honest on the basis of religion. I approach it on the
>basis of evaluation of the evidence. That seems to be the fundamental
>difference between your opinions and mine. Yours are based on revelation,
>mine on evaluation.

Incorrect. My OPINIONS are based on MY evaluation.

Because my OPINIONS are not in line with yours, you wish to "correct" them as in some Inquisition "trial by fire" with many accusations.

If the ARRL cannot accept negative criticism from anyone, then it has NO business being a political-action organization "representing" anyone. Republicans, Democrats, and other political parties continually get bombarded with negative criticism, yet they manage to survive. Those political parties acknowledge openly that they use spin to influence voters...but somehow, the ARRL is "above" such things?

I think not. What I've seen in here (observation and evaluation) is definite proof of a Belief System at work...that the ARRL can do no wrong, is always doing "good works," and that they "speak" for all "good" radio amateurs. All because they "say" they do...despite past public history that they are at odds with significant groups of people. What I see in here is considerable pique/irritation/suppressed-anger against those who are not Believers (in "impossible-to-prove honesty"), some of which results in outright damning of skeptics for expressing skeptical observations and evaluations.

The ARRL should not be worried...they have no competition in "representation." They can be as arrogant as they want under those conditions. Sometimes they ARE.

>>So, by all that you've said in here, you've never been IN any
>>military branch.
>
>Even if that's true, why would it be significant? K2UNK is relating his
>personal experiences aboard US Navy ships in the 1966-1970 time period. I
>think he is being honest about his observations.

So, you are the Judge of what is acceptible and not-acceptible in this unmoderated newsgroup?!?

I've been honest about my descriptions of US Army communications in the 1952-1960 period. Others have said that I "lied."

>Were you ever in the US Navy?

Irrelevant. I've stated that I served in the US Army. Do you know the difference between the two?

>> Further, you haven't done much research in the matter either.
>
>How do you know?

You are unable to cite any sources other than amateur radio publications. You have been given information sources for the rest of the radio world in here, yet there is no sign you have accessed any of them.

>>Think on this: The USN has a lot of shore stations.
>
>How many is "a lot"?

Irrelevant again. A very close approximation to the exact number may be found from USN websites.

>>Those shore stations are considered "fixed-point" stations; i.e., they
>>do not move. The shore stations communicate with one another.
>
>How does this have any bearing on Bill's experiences?

It is additional information (which leads to a correction of a quote later). Ships are mobile. Shore stations are almost always fixed geographically. Fixed-point locations allow easier planning and management of HF radio paths. Shore stations are inherently capable of larger antennas than can be mounted on ships. For example, a rhombic antenna for HF would be difficult to fit on a battleship.

>>I'm sorry, but how did you derive "...heavily dependent on morse?"
>
>From the personal experiences of US Navy personnel serving on US Navy ships
>in the time period cited.

...particularly if they favored morse code. :-)

>>You saw
>>one code key on a photo of a radio bench and enlarged that?!?
>
>Nope. US Navy radio operators on various ships reported on the equipment and
>techniques in use, just as Bill did.

Independent historical data is available. Why didn't you use it?

>Were you ever in the US Navy?

No. Were you ever in any branch of the US military?

>>Had you done enough research you would have found out that the
>>USN was using RTTY both in-clear and on-line-encrypted in 1940
>>on cruisers and heavier ships.
>
>I knew that already. The discussion was about the use of Morse, not RTTY. And
>while RTTY was used on those ships in that time period, so was Morse.

If you "knew" that independently, you could have mentioned the source.

Seemingly, you "knew" that because I mentioned it in here years back.

Find your reference to the "knew that already" statement...let's compare.

>The US Navy consists of more than cruisers and heavier ships. What mode do
>you think was used by US Navy submarines in WW2?

You can find out by going to the USS Pampanito website. They have
a nice website describing their radios and radio equipment.

Were you in the US Navy during WW2?

>>I'm not sure who
>
>(N2EY)
>
>>uses for the source of that factoid, but I said that
>>the US military had decided to eliminate OOK CW for (capitals to make
>>sure the poor-of-seeing have aid) FIXED-POINT TO FIXED-POINT HF long-
>>haul communications in 1948.
>
>Mountains out of molehills. Why do you insist on an extremely literal
>interpretation of everything?

You made a false quotation out of a statement that I made. I corrected it.

There are some significant differences in fixed-point (shore stations, for
example) and mobile (ships, for example) communications. Fixed-point
stations can use larger antennas on HF, have more transmitter power
(generally), and possibly use space-diversity receiving techniques. If a
large geographic locations allows it, receiver and transmitter sites may be
separated to improve overall efficiency. In "traffic handling" shore stations
have the capability to communicate a larger number of messages than
individual mobile stations.

>>Hello? The largest "traffic" of the US
>>military communications over radio occured on fixed-point to fixed-point
>>HF long-haul communications.
>
>Are you sure of that fact for the US Navy? Show us your sources.

Communication facilities for the Yokosuka Naval Base were large enough
to handle about 2/5ths of what the Army "traffic" through ADA was
during the Korean War . That would make it about 90,000 messages a

month. As to the EXACT number, that is irrelevant to the discussion.
At the above rate, that is about 3,000 messages per 24 hour period.
It is a bit much to expect any carrier of the Korean War period to handle
that many messages daily.

>>The reasons are: Much higher throughput,
>>much fewer operator mistakes, encryption can be integrated with in-clear
>>communications means using TTY.
>
>Nobody disputes any of that - for military applications.

You should not dispute any of that for commercial carriers, either.

>>As late as 1965 land force HF radio equipment still had OOK CW
>>capability up to Division level. But, having the capability does not infer
>>that OOK CW was much used.
>
>It does indicate that the capability had not been eliminated. And the
>discussion is about the US Navy.

This whole thread "started" with a lot of bitching and whining over some
alleged "age discrimination" given in a comment on NPRM 98-143. You
do NOT control anything in here nor have you the power to decide which
discussion is allowed or not allowed.

All "discussions" in unmoderated newsgroups are free-form; i.e., they
can take directions determined by the participants.

>When did the various military services stop requiring Morse training of their
>radio operators?

Some time prior to 1990. Why is that relevant? There was no morse code
used by the US military in the Gulf War.

The Army Training Command Digital Library has a publicly-viewable and
downloadable field manual that is a catalog of operational signal
equipment utilized by all US military branches. It is FM 24-24 and dated
1994.

>How does any of that relate to your demands to the FCC for an age requirement
>for a ham license?

It doesn't. Nor does it relate to your demands at what is permissible to post
in here or not permissible.

>>Unrelated comparison but not unexpected in here.
>
>No, it's very relevant. FCC knew what the military was doing, but did not see
>those changes as having any bearing on the amateur radio service.

How do you "know" what the FCC knew at any time? When were you an
employee of the FCC?

Under 97.1, Title 47 CFR, you will find political statements that relate to the amateur radio service as "providing a pool of trained operators" for the nation.
If the US military did NOT require morse communications then that "pool" would not need tested ability at morse code. Perhaps the nation needed morse code "pool" amateurs for other radio services? The only other radio service needing morse communications is maritime radio and that is rather limited.

>>The FCC no doubt was heavily lobbied then by the ARRL for that
>>"incentive" plan from the more-influential ARRL members who were either
>>retired (and wanting to strut their stuff with nice titles and status) or
>>had morsemanship as a personal favorite.
>
>INCORRECT. Pure wishful speculation on your part, driven by your ignorance
>and anti-ARRL/anti-Morse code bias, bigotry and prejudice.

NOT "incorrect." I stated an opinion based on observation and evaluation.
I watched it happen, talked with all sides on that (pro, con, and indifferent).

I could say, with equal "correctness" that your "corrective comment" is based solely on your pro-morse-code bigotry, extreme bias, and having a hissy fit. That would be unethical, so I won't say it. :-)

>The use of SSB by hams had been long promoted by the ARRL leadership and
>others. This started in earnest in the late 1940s. As examples of how ARRL
>promoted the use of SSB, there was a regular column in QST as early as 1948
>("On The Air With Single Sideband") and an in-depth publication on SSB for
>the radio amateur. AM and CW got no such special promotion.

OOK CW has been getting special mention and dispensation since those same late 1940s until time-now...in the ARRL periodicals.

>>The old-timers wanted their skills-while-young to
>>be "worth something" so they pushed for morsemanship as a
>>criteria for "excellence" in amateurism.
>
>Obviously some did that. But not the ARRL leadership.

Incorrect by observation and evaluation.

>>Did the "FCC" push for the "incentive plan?" No.
>
>INCORRECT. What is your source for this? Good historians consult as much
>research material as is possible,
>from as many sources as possible. Bad historians limit their research and
>interject their own personal desires into their histories. You are being a
>bad historian.

The FCC merely codified the regulations to fit the ARRL requests. That is my observation and evaluation.

I'm not trying to be a "historian," just pointing out who did what to whom. :-)

>FCC wanted incentive licensing.

Why don't you be a good little morseman and trot on over to the FCC public Reading Room? There you can find all the relevant material to your claims (or against your claims) of who wanted what during the 1960s. DC is a lot closer to you than to me. :-)

>>The ARRL was doing the pushing.
>
>INCORRECT. What is your source for this? Good historians consult as much
>research material as is possible,
>from as many sources as possible. Bad historians limit their research and
>interject their own personal desires into their histories. You are being a
>bad historian.

The source is rather obvious...ARRL publications, particularly QST, of that time period both BEFORE any FCC regulatory changes and afterwards.

Can't you be original in a "reply?" You have mirrored my text twice now. :-)

>ARRL was responding to FCC pronouncements in 1963.

Every time the FCC has made regulatory changes, the ARRL makes statements that it "approves" of them. Pro forma. :-)

The ARRL would be foolish to say much against new regulations. :-)

>>The FCC probably didn't much care one way or the
>>other since it was facing a great heaping amount of new radio services
>>using ever-increasing technology.
>
>INCORRECT. What is your source for this? Good historians consult as much
> <a third mirroring of my original text deleted>

Sources? The entire output of the trade magazines of the period from the end of WW2 to time-now...the statements of the FCC itself since they have put up a website. Certainly in the last four decades, the number of new radio services have increased considerably more than at any previous time, plus those existing radio services have changed, added more and different technologies in their operation. The result was a substantial workload addition to the FCC's regulatory task.

>Do you think the public service contributions of amateur radio are not
>important?

Not in the overall picture of "public service" communications involving public safety, search and rescue.

>How about during the Alaska Earthquake, which happened about that
>time?

What about the Cuban Missle Crisis that happened about that time? :-)

What about the Loma Prieta Earthquake a quarter century later?

What about the Northridge Earthquake about three decades later?

>>Important to individuals, yes, but each station did not directly tie in
>>with national needs. But, the FCC must listen to its citizens so it did
>>what amounted to a compromise in the 1960s...it listened to the only
>>large amateur radio membership organization of the time, the ARRL.
>
>INCORRECT. What is your source for this? Good historians consult as much

<fourth mirroring of my original statement deleted>

Was there a large national amateur radio membership organization other
than the ARRL in the 1960s? Where are they (or it) now? :-)

Explain how radio hobbyists, however licensed, directly tie in with national
needs? Are they "called up" in times of "emergency" and required to
serve? Are they "mobilized" in any way in required service?

>INCORRECT. While the immediacy of email and websites did not exist then, all
>this did was to lengthen the time span required. The percentage of interested
>parties commenting was actually greater back then than for 98-143.

I haven't seen any numbers in those claims.

Personal computers did not exist in the 1960s.

>>The FCC effectively rubber-stamped the ARRL proposal and the ARRL
>>proceded to take the credit for it ever since...until the 98-143 NPRM
>>and eventual restructuring of license classes and testing. There can
>>be no mistake that the ARRL took the credit for the "incentive plan"
>>and it is pointless to now "blame" the plan on the FCC.
>
>INCORRECT. What is your source for this? Good historians consult as much
> <mirror #5>

Okay...give us the "real" truth as you "know" it... :-)

>Here's what REALLY happened. This is a short account, but the essential
details
>are there. Show us, if you can, where any of the following facts are
inaccurate.

First you show where your "facts" are accurate. :-)

>In 1963, the FCC expressed concern that so few amateurs had aspired to the
>Amateur Extra class license.

They did? The FCC isn't chartered to "promote" one radio service or another.
The FCC does create new radio services on the basis of citizen's requests
that result in NPRMs. [the 98-143 NPRM was based on Congressional demand
for restructuring, to be applied to all radio services]

In what FCC document is this "concern" expressed?

Show why the FCC was "concerned." Please use exact FCC wording.

>The FCC asked for proposals on how to restructure
>the ARS to provide more "incentive" for hams to attain higher license grades.

>
>The ARRL leadership responded in 1963 with a simple proposal:
> <remainder omitted for brevity>

So, was the ARRL the only organization or individual responding to all that "concern?" How many others were concerned with the "concern?"

>FCC got many proposals from the amateur radio community. Some came from
>individuals, some from other amateur radio groups. At least ten (10) of these
>proposals were taken seriously enough by the FCC to earn RM numbers (RM-378,
>455, 470, 474, 480, 481, 516, 517, 538, 577). It was from these proposals
>that the idea of subbands-by-license-class and other details came about.

Where are these documents to be found? Do we all have to go to the Reading Room at the FCC to find the official documents? Are they available on other government web sites?

>It should be noted that the FCC received over 1700 formal comments on Docket
>15928, back when the US amateur population was about 40% of what it is today.
>This figure does not include those whose comments were part of RM-499 or
>other proposals.

Where may we confirm this with the US government?

>FCC wanted incentive licensing. FCC did not "rubber stamp" anyone's proposal.
>The whole process was public and open to anyone wanting to comment or propose
>different ideas.

The FCC didn't use rubber stamps? Gosh, I have a citizen's band radio license from 1959 and my First Phone of 1956 that plainly had a "Mary Jane Morris" rubber stamping in place of a Secretary's signature on both documents! :-)

They are of different sizes so the FCC had at least two rubber stamps!

>And there was no talk of an age requirement for any amateur license.

How many six-year-old licensees were there in the 1960s? :-)

>Lenover21's account of how "incentive licensing" came to be is in error. It
>borders on being intellectually dishonest.

Didn't you forget "unethical," "heretical," or even "treasonous?!?" :-)

When am I to be burned at the stake? :-)

Pile up those sticks and wear your uniform, Jimmie, Jon Bloom
will have the matches.

<Followups Set to rec.radio.cb>.

Whats wrong with that? Citizens make fun of public servants all the time!

Besides, seems to me that the judges probably get to see more examples
of outright luser behaviour the almost any other profession, with the
possible exceptions of traffic police and A&E doctors.

If the guy in front of the bench is behaving like a tosser the judge
should be alowed to say so!

Regards, Dan.

Close enough. :-)

The exact quote is -

"It ain't braggin' if you can back it up." - Dizzy Dean

Another, which should serve as a paraphrase baseline for several self-distinguished 1x2s in here is -

"Anybody who's ever had the privilege of seeing me play knows I am the greatest pitcher in the world." - Dizzy Dean

There's considerable difference between "if ya done it" and "if you can back it up." However, that's a whole new flame fest for another time, heh heh.

Quite a guy, old Diz. There's even a website for him at

www.dizzydean.com

Given the multiple recievers, RTTY failure wasn't an issue. Indeed, we
received 24 hours
uninterupted encrypted RTTY. The decryption was via KWR-37.

> Was this on all USN ships? From the records and accounts I've seen, the

I reported onboard DD-781 (a late WW-II destroyer) and the only
RBA we had was used for receiving AM broadcasts for shibboard entertainment.
All the HF receivers were R-390 or R-390a. When we went for a complete
refurbish over winter of 66/67, some of the R390s were replaced with
R-1051s...
the first digital frequency synthesized unit I saw. Eventually we recieved
new R-1051s

> - While it is claimed that all branches of the US military decided to
eliminate
> Morse in 1948, almost 20 years later the capability was still retained by
the
> Navy as a backup.

Well morse was at least still being taught to new radiomen when I got
out in Jan 70. But, as I've said before, in over 3.5 years on the same
ship I never saw morse used except for a drill practice.

Cheers,
Bill K2UNK

I agree with the judge on this one. As a matter of fact,
it's a darn good thing stupidity isn't a crime in the U.S.A.!!

It's just like Gallagher said "they aught to let people have
little dart guns and when ever they see somebody driving
like an idiot they shoot the car with the dart. That way
whenever the cops see someone with a lot of darts on
their car they stop them and give em a ticket for being
stupid."

I need to verify to you that I know? I'll let my country count speak to
that in reference to my operation from American soil. As to my
operations abroad, feel free to check any of the online DX newsletters
or back issues of any magazines containing DX news.

Your comments indicated confusion. If you'd like to look up allocations
for each station you contact on each band, you are fee to do that. Most
folks don't do that.

> > > > > > Dave, you chase band/countries. I had one band. If DXCC is 100

That's a tough one, Brian, in light of the fact that I haven't done any
"unethical" DXing. Your "ugly American" comment has no basis in fact.

> > > > > Part 97 doesn't say I cant' be DX or work DX

If they ragchew with G's and consider that to be DXing, I'll be happy to poke fun at them. If they believe that the DXCC program is about working 100 countries and then stopping, then yes, I'll make fun of them. If they, like you, would ask a DX station to confirm that he is operating within his assigned allocation and tacks a cute "QSL?" to the end of the exchange, then yes, I'd laugh at him.

> > > Do you work them two at a time? five?

I've worked 'em at the rate of over 300 QSOs/hr on SSB and over 200/hr on CW. I'm sure that an experienced DXer like you has done much better.

Jerry, here's another site that seems to be following the trend of calling 10 meter gear "CB Radios". In fact, at this url you will find a page listing "CB Radios" offered for sale - and the very first one on the list is a *marine* transceiver. The rest are mostly 10 meter gear.

http://www.cbsattheirbest.com/cbradios.html

There's far too much of this sort of thing going on and IMO it is the main reason why bootleggers are getting out of hand. Truckers and newbie CB types are being given the impression that CB has been defacto "expanded" to include 10 meters, FRS and even marine.

Getting the FCC interested in CB enforcement is difficult, but here's an idea that may streamline the process of getting a few of these "CB Dealers" popped. Since Riley H's charter is Ham Radio, look around on

these sites until you find names of people who are associated with the business: the owner, the marketer, or even the technician who "mods" these things. If you can find one of these people with a valid ham license, that opens the door for Riley to step in. Worth a try.

Amateur Radio Newsline™ Report 1302 July 26th, 2002

Amateur Radio Newsline report number 1302 with a release date of
Friday, July 26th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A giant solar flare causes problems on the High Frequency bands and a popular ARRL Director calls it quits. These stories are first on Amateur Radio Newsline report number 1302 coming your way right now.

(Billboard Cart Here)

**

PROPAGATION: X CLASS SOLAR FLARE CLOSES HF BANDS

If you have been wondering where all the signals you normally hear on the High Frequency bands have gone, we have the answer. A large flare on the Sun effectively closed them down. Amateur Radio Newsline's Don Wilbanks tells us about the solar eruption and what it could mean for ham radio:

--

Solar flares come in all sizes, and the Astro Alert service says the latest ones are some of the largest. The E-newsletter says that the sunspot complex believed to be responsible for a July 21st X Class flare rotated fully into Earth's view on July 22nd. It announced its arrival by spawning a second and spectacularly powerful X Class 4.8 level eruption.

Solar Alert says that this latest flaring region has the potential to produce substantial effects on Earth over the next two weeks and we could see more than we have in the last 10 years. It all depends on whether or not the sunspot complex continues to pump out activity at the same rate that it is presumed to have produced over the last several days.

For radio hobbyists it means that there could be very little to hear on the bands from 1.8 to 30 MHz for a while. And, depending on the level of atmospheric ionization that takes place, it also could bring some unexpected long distance communications to 6 meters and above. If you have weak signal gear for the world above 50 MHz, keep and ear on frequencies like 50.110 and 50.125 MHz and be prepared to hear -- and to work -- the unexpected.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, in New Orleans.

--

More on this story is in the Solar Alert URL at
http://www.spacew.com/astroalert.html. (WDX6AA)

HAM RADIO POLITICS: ARRL BOARD MEETS IN CONNECTICUT

The American Radio Relay League has held its 2nd meeting of 2002. It took place July 19th to the 20th in Windsor, Connecticut. Amateur Radio Newsline’s Cathy Anno, KB0FDU, has the details:

--
Perhaps the biggest news came as the Board Meeting was getting ready to begin. Thats when the American Radio Relay League was named to receive a $181,900 homeland security grant from the U-S government to train Amateur Radio operators in emergency communication. The A-R-R-L was among several dozen nonprofit organizations designated to receive upward of $10.3 million in federal money to boost homeland defense volunteer programs. The grant, from the Corporation for National and Community Service Special Volunteer program, will provide free ARRL Amateur Radio Emergency Communications Course training to 5200 volunteers nationwide, starting in 2003.

According to the ARRL South-Eastern Division E-letter, one issue that garnered a lot of conversation was the plan to remove the Section News columns in QST to the ARRL web-site. This proposal was presented last January but a decision was deferred for six months. Now the Leagues Directors, by a 9-6 vote, decided to approve the change.

Starting with the January 2003 issue of QST, columns from the 71 Section Managers will be moved to the web-site. ARRL staff will make provisions for those without web access, to have access to their own Section Managers column. The Board also voted to move the contest line scores out of QST and post them on the web as well.

ARRL's Development Director Mary Hobart, N1MMH, presented a new creative method of increasing member awareness. Soon, ARRL members will be asked to participate in a premium membership program. Various levels of membership will be created, like Diamond Club and Maxim Society. The higher level of participation the better the premium benefit received. Details on this program will be announced soon.

The board named Sherri Brower, W4STB, Vero Beach, Florida, as winner of the McGan Memorial Silver Antennas Award for Public Relations. Bower, who becomes Section Manager of South Florida on October 1st, was cited for her long-term commitment and dedication to present all aspects of amateur radio to the public. ARRL South Eastern Division Director Frank Butler, W4RH, will present the award to Bower at the Melbourne Hamfest in Melbourne Florida on September 14.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

For full coverage of the ARRL Board meeting take your web browser over to www.arrl.org. (ARRL S.E. Division E-Letter)

**

HAM RADIO POLITICS: WB8BGY RESIGNS AS GREAT LAKES ARRL DIRECTOR

And a big surprise happened Saturday July 20th during the ARRL Board of Directors meeting on. That’s where Great Lakes Division Director George Race, WB8BGY, of Albion, Michigan, unexpectedly tendered his resignation. Amateur Radio Newsline’s Fred Vobbe, W8HDU reports:

--

George Race, WB8BGY, who is 66, has served on the ARRL Board of Directors for 12 years. Prior to that, he held numerous other field organization positions including several terms as Michigan Section Manager. Race is legendary within the ARRL field organization for his travels around the Great Lakes Division. Each year he has spenr btween 45,000 to 50,000 on the road on the League's behalf and has literally worn out three cars in the process.

Race admits that a Board vote to move ''Section News'' from QST magazine to the World Wide Web did play a small part in his decision to resign, it was not the primary factor. Rather it was time. Time to devote to his wife and family. WB8BGY sayd that there is life beyond the League.

Accolades for Race were quick in coming. One of the first was from ARRL President Emiritus George Wilson, W4OYI. He told Amateur Radio Newsline that George Race devoted decades to furthering the cause of both ham radio and the League. Wilson called Race a tireless worker on behalf of the hobby adding that he definately will be missed.

Reporting from the ARRL’s Great Lakes Division, I’m Fred Vobbe, W8HDU.

--

By normal succession of officers, Great Lakes Vice Director Gary Johnston, KI4LA, was declared the new director. ARRL President Jim Haynie, W5JBP, has appointed Michigan Section Manager Dick Mondro, W8FQT, to be the new Great Lakes Vice Director. A successor to Mondro as Michigan Section Manager is expected to be named soon. (Adapted from ARRL Bulletin, W4OYI)

RADIO LAW: CQ SAYS YES TO NEW HAM BANDS

The publisher of several hobby radio magazines is urging the FCCto proceed in the creation of several new ham bands. However, it is voicing significant concern that the regulatory agency appears to be placing the interests of unlicensed services on a par with, if not ahead of, those of licensed services. Amateur Radio Newsline’s David Black, KB4KCH, tellks us who filed and why:

--

Most magazine publishers traditionally stay out ham radio politics. But the people who publish CQ Amateur Radio, CQ VHF and Popular Communications magazines are making an exception this time.

The publishers have filed comments with the FCC strongly supporting proposals that would create two new amateur bands and elevate a current amateur allocation from secondary to primary status.

CQ wants the FCC to adopt a proposal to create a "splinter band" at 135.7 to 137.8 kHz -- this would give amateur radio its first allocation above 200 meters in nearly a century. The company proposes opening the band to all amateurs with General Class or higher licenses, not imposing mode restrictions and making technical requirements flexible enough to encourage a wide range of experimentation.

CQ is also pushing for creation of a new ham band at 60 meters from 5.250 to 5.400 Mhz. The proposal suggests that full amateur power be permitted; that there be no sub-banding, either by mode or by license class; and that the band be open to all amateurs with HF privileges. That would include CW privileges for hams holding Novice Class licenses or Technician licenses with code credit.

Finally, CQ voices strong support for the FCC's proposal to make the Amateur Service primary on 2400 to 2402 MHz. The publishers say they're very concerned about one Commission request in its Notice of Proposed Rule Making. That requests solicits comments on the change in status that might affect non-licensed users of this band, such as cordless telephones and wireless computer networks.

CQ wants the Commission to reaffirm its long-standing policy that the interests of licensed operators and services are primary on any frequencies shared by licensed and non-licensed users.

For the Amateur Radio Newsline, Im David Black, KB4KCH.

--

CQ's comments were filed electronically and may be viewed in full on the FCC's Electronic Comment Filing System website at www.fcc.gov/e-file/ecfs.html by selecting "Search for Filed Comments," then typing in "02-98" under "Proceeding" on the search page, scrolling through comment summaries until the CQ comments are reached. (CQ)

**

RADIO LAW: COMMISSION REQUIRES RADAR DETECTORS TO COMPLY WITH EMISSION LIMITS

The FCC has imposed new emission limits and certification requirements on radar detectors. This, to prevent them from causing interference to very small aperture satellite terminals that operate with downlink frequencies in the 11.7 to 12.2 GHz band. Tests at the Commission's Laboratory have shown that some radar detectors emit radio signals in the downlink band far in excess of the limits that apply to other unintentional radiators. As a result of the new standards, radar detectors sold in the United States will have to meet the new and more stringent limits. The complete document is at

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-224518A1.doc (CGC Communicator)

**

RADIO LAW: VOTE ON NEW FCC COMMISSIONER EXPECTED

Ending months of political bickering over judicial nominations, a senate panel approved a longtime aide to Senate Majority Leader Tom Daschle for a seat on the Federal Communications Commission. The nomination of Jonathan S. Adelstein, who has worked for the Democratic leader since 1995, will go to the full Senate for a vote.

Approval is expected, with several Republican senators saying they would vote for the South Dakota native. The FCC panel has five commissioners, who are nominated by the president and confirmed by the Senate. Only three can be from the same political party. (Congressional Review)

**

ENFORCEMENT: WISCONSIN HAM ASKED ABOUT CB SALES

The FCC has asked a Wisconsin ham to explain his connection to a website that purportedly offers for sale C-B equipment not certified by the agency. The FCC’s Riley Hollingsworth explains:

--
Hollingsworth: “We opened an inquirey regarding the marketing of non certified radio equipment including non certified CB transceivers and HF linear amplifiers by Roper Electronics. Roper Electronics has a web page entitled tomah.com, and we are inquiring into the relationship between Roper Electronics and Randi Owen, N9UOM, of Tomah Wisconsin.”
--

Specifically, Owen was asked to fully describe his relationship, if any, with Roper Electronics. Also, if it turns out that he owns or is affiliated with Roper, he was requested to furnish the FCC a listing of all models of HF transceivers and amplifiers domestically sold and/or offered for sale by Roper since January 1st of this year. That list must include the FCC certification number for each model.

The letter of inquiry went out to Owen on June 18th. Hollingsworth says that a reply to that inquiry is do in right now. (FCC, RAIN)

**

HAM SCHOLARSHIPS: FAR SCHOLARSHIP WINNERS ANNOUNCED

The Foundation For amateur Radio has announced this year’s winners for the fifty-seven scholarships which it administers. The names of the recipients for the individual awards appear on a list at several websites including the ARRL. For more information, write FAR Scholarships, PO Box 831, Riverdale, Maryland, 20783. The announcement for the year 2003 awards availability will be made early next year. (FAR)

**

UPCOMING EVENTS: PACKARD AUTOMOBILE CELEBRATION

On the special events calendar, the Warren Ohio Amateur Radio Association will be operating special events station W8P to commemorate the annual Packard automobile celebration and car show. The Warren group will operate on the 40, 20, 15 and 10 meter bands. QSL's go to the Warren Amateur Radio Association, Post Office Box 809, Warren Ohio. The Zipcode there is 44482 (Via Internet Posting)

**

UPCOMING EVENTS: OH-KY-IN HAMFEST

Still in Ohio, but over in Cincinnati, the OH-KY-IN Amateur Radio Society will be holding its annual hamfest on July 27th. The venue is the Diamond Oaks Career Development Campus and this event features seminars, hidden transmitter hunts and a giant flea market. More information on this one is on the web at www dot ohkyin dot org. And in case you are wondering what OH-KY-IN stands for – its Ohio, Kentucky and Indiana – the three states that provide most of the attendees to this annual event. (Via E-Mail)

**

UPCOMING EVENTS: NATIONAL BABY FOOD FESTIVAL

From one of our listeners in Michigan comes word that W1B is a special event operation from the National Baby Food Festival. Yes, there really is a National Baby Food Festival and W1B will operate the General class areas of 75, 40, 20, 15 and 10 meters while its underway. And if you work this one, you QSL with a self addressed stamped envelope to Shawn Gibson, KC8LGD, 3377 West 80th Street in Newaygo Michigan. Gibson’s zipcode is 49337. (Via Internet Posting)

HAM RADIO IN SPACE: RUSSIA SAYS BASS LIKELY TO FLY TO ISS

The Russian space company Rosaviakosmos has announced that N*SYNC singer Lance Bass has signed a preliminary contract and is officially a candidate for a Russian mission to the International Space Station this October. This, even the United States National Aeronautics and Space Administration, which partners with the Russians on the space station project has expressed concerns that the pop musician may lack the proper education, endurance and fluency in Russian to undertake such a journey.

But a spokesman at Russia's Baikonur Cosmodrome training center in says that within a week Bass will begin training. The spokesman said that the singer should be able to cover enough ground to make the trip adding that three months was more than enough time to teach him the basics.

Bass will be the third space tourist to pay Russia $20 million to visit the orbiting outpost. Previous space visitors were U.S. millionaire Dennis Tito KG6FZX and South African entrepreneur Mark Shuttleworth. Tito and Shuttleworth did find time to use the ham gear on board the station. Bass interest in Amateur Radio operations from the ISS is still unknown. (ARNewsline™ from published news reports)

**

RADIO IN SPACE: LISTEN TO JUPITER ON YOUR HAM TRANSCEIVER

Want to hear what’s happening on the planet Jupiter? Just listen on the 15 meter band. So says Popular Communications Magazine in an article aptly titled Listening To Jupiter On Your Shortwave Receiver.

No, you won’t hear the latest scores from the Jupiter Red Sox playing the Mars Marlins. What can be heard is the natural sound of the orange giant. An electromagnetic wave that’s emitted at irregular intervals by Jupiter that the article describes as a sweeping lighthouse like sound.

All you need to listen in is a shortwave receiver that can tune the good old A-M mode and a decent antenna. Exactly how to listen and what to listen for is on pages 8 and 9 o the August issue of the magazine. (PopComm)

**

INTERNATIONAL - NEW ZEALAND: TECHNOLOGY CONVENTION 2003

From Down-Under, word that the New Zealand ham radio Technology Convention will now be held once every two years. Formerly called the VHF Convention, this bi-annual event now caters for a broader range of interests.

The Convention was last in Whangarei over Easter Weekend 2001. The New Zealand Association of Radio Transmitters days that it is currently is looking for a host club for Technology Convention, 2003. (NZART)

**

INTERNATIONAL - UK: HAMS GET NEW PROPAGATION STUDY BAND:

UK Radio Amateurs will shortly be able to use a number of spot frequencies around 5 MHz, to take part in a four-year propagation study. A full Class-A license holder wishing to take part will require a Notice of Variation to his existing license. At the present time, the final administrative arrangements are being put into place. A further announcement will be made regarding the start date shortly. (GB2RS)

**

INTERNATIONAL - UK: THE GREAT NEW TOOTH PHONE

Meantime, a pair of British engineers say they have invented a revolutionary tooth implant that works like a mobile phone. The 'tooth phone', designed by researchers James Auger and Jimmy Loizeau, consists of a micro sized receiver, transmitter and a transducer that are implanted into a tooth during routine dental surgery. Sound, which comes from the tooth is transferred to the inner ear by bone resonance. This means information can be received anywhere and nobody else can listen in. (Science & Technology)

**

DX

In DX, DJ6TK, is vacationing and operating 6 meters from Bornholm Island on CW and SSB mostly in his afternoon or late evening hours UTC. Listen for him signing JO75LA and possibly from JO74MX as well. (MDX)

I2IA stroke ID9 will be active from Ipari Island through September 15th. He intends to visit also other islands in the Eolie group during this time. (GB2RS)

And a group of operators from Indonesia and Italy plan to activate Masalembu Island as 8A3M from July 29th through August 4th. They expect to be on the air with two or three stations on SSB, CW and RTTY. QSL via IZ8CCW. (OPDX)

**

THAT FINAL ITEM: CAPTAIN KIRK - “THEY BE WHALES”

In what sounds like it’s right out of a Star Trek movie plot, will Captain Kirk and Mr. Spock have to go rescue some whales from oblivion after all? And what does this have to do with radio communications? Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the answers to both of these questions:

--

In the movie Star Trek The Voyage Home, the crew of the star-ship Enterprise -- without the Enterprise -- takes on the job of saving our planet from annihilation by a space probe. The probe is angry because it is programmed to contact Humpback whales, but it cannot find any because all the whales are long gone from the planet. To save the world, Kirk and crew travel back in time to get some whales and bring them into the future.

With that in mind, picture this. The administration has now given the Navy permission to begin using a powerful new low-frequency SONAR to identify enemy submarines.

SONAR, which stands for Sound Navigation and Ranging, is usually used to observe objects in water to determine distance. According to the Navy, each of the new SONAR’s eighteen transducers produces an audio signal equivalent to the noise level you would hear if you stood next to an F-15 fighter jet while I was taking-off. It is this high power that makes it possible for the sound waves to travel several hundred miles and return an accurate target echo.

But environmentalists are worried. They note that that the new SONAR system operates in the same band of frequencies used for communication by many large

whales, including Humpbacks. They say that whales are particularly susceptible to SONAR interference because they rely on sound for communication, feeding, mating and migration. In fact, they navigate the oceans of the world using a kind of natural SONAR of their own.

Some scientists believe that whales will mistake the Navy SONAR signals for other whale pods and swim in the wrong direction. And they believe that if this happens, the worlds whale population will decrease.

Others disagree. This group of researchers believes that the two can co-exist with careful monitoring of the whales for any adverse effects which might be noticed. Adjustments could then be made to the SONAR systems operation to minimize or eliminate any problems.

The bottom line is that it's a tradeoff in communications. That of the whales versus the need of the public to be safe from enemy attack.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

The National Marine Fisheries Service says with proper monitoring and safeguards, the Navy’s new SONAR is not likely to injure whales or any other marine mammals. But to be on the safe side, we hope Captain Kirk, Mr. Spock and Scotty are standing by. (Adapted from published news reports)

I characterized your arguments, Len, not your person. Don't you know the
difference?

>>Is Jim a member of your family? Was the form of address intended to be
>>affectionate?
>

Do you think the postings are not coming from a person? Maybe you've been debating with an AI system -- and losing!

> Go back a couple years and determine if "K4YZ" is attempting to be
> "affectionate" with his form of address to me.

What does his behavior toward you have to do with your behavior toward other people?

>>No, it's not okay. But what has that got to do with your use of personal
>>attack as a way of ducking the hard questions?
>
> Nobody is "ducking 'hard' questions." You have been attempting to

It gives me a chuckle when you ascribe your own behavior to others. Changing the subject is your main tactic when you get cornered. Then when someone takes you up on the change, you accuse them of having changed the subject! (See the CR discussion above.)

> Explain again how using "Jimmie" can be construed as a "personal
> attack."

It's intended to belittle, Len, like much of what you post.

>>I'm not painting, Len, I'm just pointing out the features of the image
>>you're painting.
>
> No, Jon, you are posting what you post out of various kinds of personal
> pique/irritation/discomfort on negative criticism of the ARRL.

You would like people to believe that because you think it will detract from my arguments. But all it really does is expose your pique/irrritation/discomfort from being challenged to back up your claims with something substantive.

> That makes
> your vision astigmatic, distorted. It might even be considered

> "ethical?"

I'm not interested in that exchange, Len. I routinely skip over the public squabble between you and Steve; it's pot and kettle as far as I'm concerned, and neither of you are doing yourselves credit. What I am interested in is whether you will present any specific evidence of the dishonesty with which you have changed ARRL.

>>I'm just
>>attempting to get you to live up to that ethical obligation. If you

> that anyone can see is statements made by the ARRL, their officers and
> staff, and ARRL members that they are "honest." In any other venue
> those would be called CLAIMS, not "evidence."

I'll explain it to you again, Maybe you'll get it this time. It's a simple matter to verify many of the statements made by ARRL. (Do you agree, or are you claiming that everything ARRL says is a lie?) With a number of verifiable claims on the one hand and not a single instance of a dishonest statement on the other, a reasonable person, one not acting on the basis of an unchangable prejudice, could only conclude the ARRL is honest.

>>Oh? Who, specifically? In what way, and using what evidence? Claiming
>>that a lot of people agree with you is an old, weak rhetorical trick.
>
> Claiming "honesty" is an old, weak political rhetoric trick. When
> coupled with omission of certain other things to emphasize an
> organization "good works," it is called SPIN.

The same is true of "dishonesty." But when you claim dishonesty you're going to be asked to back it up. So, back it up.

>>Unless
>>you can show where these supposed "many, many" challenges have been
>>made, you're just blowing smoke.
>
> Propagandists "blow smoke" all the time.

Yes, they do, don't they?

> known only to amateurs. That's normally called "patronizing." :-)

ARRL produces material intended to introduce people to radio. If you think that is directed at radio professionals, you are deluded.

> Not only that, the ARRL pretends to be some sort of governmental
> surrogate (too strong a word, perhaps) or at least an "assistant to
> government" in amateur radio regulation.

I'm not aware of that language ever having been used, but it's certainly true that ARRL is active in the regulatory process.

> They claim freely elected
> "representatives" which are supposed to be "for all amateurs" yet they
> are a private organization not governed by federal laws for elected
> officials of government. That leads to some viewing the ARRL as an
> Orwellian "Big Brother" (from George Orwell's famous/notorious novel
> "1984").

No doubt a few do view it that way. Some people wrap tin foil around their heads to keep out the alien rays, too. Both make about as much sense.

Hey, Len, I saw in ECFS where you had advised the FCC on what to do. Does that make you an Orwellian Big Brother?

>>> Do you want
>>> the ARRL to lead everyone by a parental hand as if they were all
>>> ignorant lambs?
>>
>>It doesn't.

So, your complaint is that an introductory book on ham radio is, well, introductory?

> :-)
>
>
>>> Do you want the ARRL to appear as some superior judge
>>> and arbiter of behavior when the evidence is clear that they are
>>> simply "representing" the thoughts of long- time members thinking
>>> their way is the "only" way?
>>
>>What evidence, specifically?
>

> Patronization is the most blatant aspect. The ARRL implies that it
> knows what is best for amateur radio but the actual fact seems to be
> that the ARRL "knows what is best" only for those higher-up in the ARRL
> opinion and policy determining levels.

I asked for evidence, Len, not more character assasination and baseless
charges. Maybe the problem is that you just can't tell the difference?

> Arrogance is not a positive attribute to any organization, yet a common
> fault with the ARRL's presentation of itself is just that to many.

Many, Len? How do you know? From alleged discussions with unidentified
hams?

> One
> example is their continuing emphasis on morse code skill as the top
> attribute for all radio amateurs,

Incorrect. It is one attribute that is presently required for HF
operation. There are a number of attributes hams might have, and I'm not
aware of ARRL ever having ranked them. Perhaps you could enlighten me by
citing where that ranking was published?

> a throwback to very early days when
> on-off keying was the only practical communications mode for radio
> amateurs. Such is out of place in this new millennium of advancing
> technology, modes, and methods. Observe the construction articles on HF
> output transmitters in QEX where, seemingly, there must always be some
> mention of "CW capability" regardless of the non-CW mode design of the
> transmitter...or the abundance of such transmitter articles that do
> feature "CW" (on-off keyed CW).

Uh, Len, CW capability is a throw-in with just about any narrowband radio.
I'd think that you, a radio expert, would realize that. So why would
anyone building a narrowband radio for use in the Amateur Radio Service
leave it out? And since CW is widely used in the ARS, what's wrong with
publishing designs that implement it?

Would you favor supression of publication of information about a mode
that's widely used and enjoyed just because you personally dislike the
mode?

>>So, let's see how you think the world should work: When someone is
>>accused of dishonesty, it's not up to the accuser to prove the charge,
>>it's up to the accused to prove innocence. And you accuse ME of
>>Torquemadan tendencies!

> propaganda to continue their existence. Propaganda emphasizing
> themselves and positive attributes, then omitting de-emphasizing
> statements and negative attributes is pure SPIN. :-)
>
> Yes, it is easy to characterize!

But to make the characterization effective you need to provide something more substantive than, "Spin! It's Spin! Spin, I tell you! Nothing but Spin!"

>>It's more difficult to challenge the statements with substantive
>>discussion.
>
> Oh, my! "Substantive discussion" on pseudo-religions? Sorry, this

> isn't a theological seminary group or a rabbinical institute forum.

It shouldn't need to be. A discussion about a person's or organization's honesty should be evidentiary in nature, not theological. That's the point I've been making. It's perfectly clear why you want to avoid rational discussion -- you have no case on that basis. The only way you can continue to assert your absurd claims is by saying it's only a matter of opinion. Like so...

>>But try taking the harder route if you expect to make a convincing
>>argument.
>
> I have stated my personal OPINIONS. You wish to put such opinions "on
> trial" by demanding "evidence" of their "correctness."

Yes, I do. That's how issues are normally resolved in civilized society.

> [such is the
> reason for naming this thread the "Inquisition."]

You misunderstand what the Inquisition was.

> Very well, where is the EVIDENCE that the ARRL is "honest" in all its
> statements, claims, and policies?

Asked and answered.

> Is this "evidence" contained in "sworn statements?" [believe us or we

> doing the necro-equine flagellation over sour wine of losing.

Ah, I get it. All of the comments that expressed any agreement with the
ARRL point of view are to be discounted because of your delusions about
what motivated them. By counting only the comments you agree with you can
come up with result you like! Maybe the comments similar to ARRL's had
hanging chads?

>>> On 90-53, the NPRM for creation of the no-code-test Technician class

>
> You will not accept dissension or skeptics. QED.

I'll accept evidence.

>>It's easy to find cases where ARRL has acted honestly, which supports
>>the assertion that it does so act. You can't cite one example of where
>>it has acted dishonestly.
>
> I have. You refuse to accept it. QED.

No, you haven't. The only concrete incident or citation regaarding ARRL
that you've brought forward in this entire discussion is a decades-old
form letter that angered you. Apparently, that incident colors your entire
approach to anything in which ARRL is involved.

>>The objective evidence is that ARRL is honest.
>
> Not enough. They constantly claim things, make statements, make policy
> as if they are "leading" US amateur radio as the ARS "representative."
> Spin, sin by omission, and they "represent" only the membership (which
> is still less than a quarter of all US amateurs, a minority group).

So you keep saying.

>>> Under the "baseline of truthfulness" description, ANY propaganda would
>>> be truthful. It isn't.
>>
>>Nope. The "baseline of truthfulness" consists of those statements that
>>can be verified. There are plenty of those from ARRL, as you well know.
>
> Then you are defining "baseline of truthfulness" as being MORE SPIN.
> Plenty of that as everyone well knows.

Do you claim that there are no statements made by ARRL that can be
verified? Of course, you don't, because you know perfectly well that such
a claim would be easily disproven. Meanwhile, you can't come up with a
single example of untruthfullnes on the part of ARRL with which to support
your claim of dishonesty.

>>Sure you do, you just prefer to ignore it because it doesn't conform to
>>revealed truth as you see it.
>
> Oh? And this is the New Epiphany?!?

Seems to be, but I'm not a beliver in your church.

>>1) That there is no absolute proof that ARRL is honest. Such proof is
>>impossible, of course.
>
> Unacceptable. You cannot have it both ways...although you try.
>
> If you cannot prove honesty, they neither can one prove dishonesty.

Incorrect. A photo from a bank security camera can prove a person is a bank robber. The lack of such a photo doesn't prove he's not.

The absolute proof you're demanding is the "creation 'science'" of the Church of Len.

>>2) That your belief in ARRL's dishonesty is akin to a religious faith.
>
> So, atheists belong to a "church of nothing?!?" Agnostics belong to a
> "church of somethingelse?!?" You are being ridiculous.
>
>
>>I've made no allegations. I've only pointed out the fallacies in your
>>belief system, the principal one being the complete lack of supporting
>>evidence.
>
> I don't have any "belief system" in a human membership organization.

True. You have a belief system AGAINST a human membership organization. Which is truly weird.

> I am a SKEPTIC. I don't believe in some "inherent honesty which is
> impossible to prove." NON-belief, Jon.

Then you don't believe that anyone is honest, right? (Oh, except yourself, of course. Where's Diogenes when you need him, eh?)

>>No, religious debates aren't settled by "reasonably objective evaluation
>>of the available facts." They're settled by schism.
>
> Okay, so there are three times as many licensed radio amateurs in the
> USA who are "schismed" in non-ARRL-membership as those who are
> "unschismed." Is that "settled?" :-)

And the single-member church of Len. Don't forget that sect! :-)

>>But I don't approach the question of whether or not a person or an
>>organization is honest on the basis of religion. I approach it on the
>>basis of evaluation of the evidence. That seems to be the fundamental
>>difference between your opinions and mine. Yours are based on
>>revelation, mine on evaluation.
>
> Incorrect. My OPINIONS are based on MY evaluation.

Of what facts?

> Because my OPINIONS are not in line with yours, you wish to "correct"
> them as in some Inquisition "trial by fire" with many accusations.

I just wanted to see the facts and the analysis on which your opinions are based. But there are none.

> If the ARRL cannot accept negative criticism from anyone, then it has NO
> business being a political-action organization "representing" anyone.
> Republicans, Democrats, and other political parties continually get

> bombarded with negative criticism, yet they manage to survive. Those
> political parties acknowledge openly that they use spin to influence
> voters...but somehow, the ARRL is "above" such things?
>
> I think not. What I've seen in here (observation and evaluation) is
> definite proof of a Belief System at work...that the ARRL can do no
> wrong, is always doing "good works," and that they "speak" for all
> "good" radio amateurs. All because they "say" they do...despite past
> public history that they are at odds with significant groups of people.
> What I see in here is considerable pique/irritation/suppressed-anger
> against those who are not Believers (in "impossible-to-prove honesty"),
> some of which results in outright damning of skeptics for expressing
> skeptical observations and evaluations.
>
> The ARRL should not be worried...they have no competition in
> "representation." They can be as arrogant as they want under those
> conditions. Sometimes they ARE.

"I believe in the father, the son and the holy ghost..."

So, what have we learned from this exchange?

1) It's okay for Len to belittle Jim because Steve belittles Len.

2) ARRL should publish no introductory material because someome who's not licensed but knows a lot about radio might be insulted at being talked down to.

3) Len's tirades against the ARRL stem from the fact that he got a form letter 20 years ago and considered it an insult.

Like I said, truly weird!

Jon, KE3Z

It's INCORRECT.

> I stated an opinion based on observation and evaluation.

Based on pure wishful speculation on your part, driven by your ignorance and anti-ARRL/anti-Morse code bias, bigotry and prejudice.

>I watched it happen, talked with all sides on that (pro, con, and
>indifferent).

From a vantage point of anti-ARRL/anti-Morse code bias, bigotry and prejudice. Were you an FCC employee? Did you read the various RMs and dockets? Did you comment to the FCC?

>>>The old-timers wanted their skills-while-young to
>>>be "worth something" so they pushed for morsemanship as a
>>>criteria for "excellence" in amateurism.
>>
>>Obviously some did that. But not the ARRL leadership.
>
>Incorrect by observation and evaluation.

How? Were you an FCC employee at the time?
>
>>>Did the "FCC" push for the "incentive plan?" No.
>>
>>INCORRECT. What is your source for this? Good historians consult as much
>>research material as is possible,
>>from as many sources as possible. Bad historians limit their research and
>>interject their own personal desires into their histories. You are being a
>>bad historian.
>
>The FCC merely codified the regulations to fit the ARRL requests.

The FCC rules changes bear very little relationship to the original ARRL proposal.

>That is my observation and evaluation.

It's incorrect. Like an "observation and evaluation" that the sun goes around the earth.

>>FCC wanted incentive licensing.
>
>Why don't you be a good little morseman and trot on over to the FCC public
>Reading Room? There you can find all the relevant material to your claims
>(or against your claims) of who wanted what during the 1960s. DC is a lot
>closer to you than to me. :-)

In other words, you know I'm telling the facts.

>>>The FCC probably didn't much care one way or the
>>>other since it was facing a great heaping amount of new radio services
>>>using ever-increasing technology.
>>
>>INCORRECT. What is your source for this? Good historians consult as much
>> <a third mirroring of my original text deleted>

>
>Sources? The entire output of the trade magazines of the period from the
>end of WW2 to time-now...the statements of the FCC itself since they
>have put up a website.

The FCC had a website in 1965?

>Certainly in the last four decades, the number
>of new radio services have increased considerably more than at any
>previous time, plus those existing radio services have changed, added
>more and different technologies in their operation. The result was a
>substantial workload addition to the FCC's regulatory task.

Yet FCC was making the amateur regs more complex all throught the '60s and
'70s. For example, FCC made the regs for amateur repeaters quite complex in
that time period.

>>Do you think the public service contributions of amateur radio are not
>>important?
>
>Not in the overall picture of "public service" communications involving
>public safety, search and rescue.

Well, there you have it.

>>>Important to individuals, yes, but each station did not directly tie in
>>>with national needs. But, the FCC must listen to its citizens so it did
>>>what amounted to a compromise in the 1960s...it listened to the only
>>>large amateur radio membership organization of the time, the ARRL.
>>
>>INCORRECT. What is your source for this? Good historians consult as much
>
>Was there a large national amateur radio membership organization other
>than the ARRL in the 1960s?

Nope - nor is there one now. But the FCC based much of the structure of
incentive licensing on proposals by small roups and individuals.

>>INCORRECT. While the immediacy of email and websites did not exist then, all
>>this did was to lengthen the time span required. The percentage of
>interested
>>parties commenting was actually greater back then than for 98-143.
>
>I haven't seen any numbers in those claims.

98-143: ~2200 comments. US ham population ~675,000. One in 306 hams commented.
incentive licensing: ~1700 comments. US ham population ~265,000. One in 155
hams commented.

>>>The FCC effectively rubber-stamped the ARRL proposal and the ARRL
>>>proceded to take the credit for it ever since...until the 98-143 NPRM
>>>and eventual restructuring of license classes and testing. There can
>>>be no mistake that the ARRL took the credit for the "incentive plan"

>>>and it is pointless to now "blame" the plan on the FCC.
>>
>>INCORRECT. What is your source for this?
>
>>Here's what REALLY happened. This is a short account, but the essential
>>details
>>are there. Show us, if you can, where any of the following facts are
>inaccurate.
>
>First you show where your "facts" are accurate. :-)

WHY? You won't accept them anyway.
>
>>In 1963, the FCC expressed concern that so few amateurs had aspired to the
>>Amateur Extra class license.
>
>They did?

Yep.

>>The FCC asked for proposals on how to restructure
>>the ARS to provide more "incentive" for hams to attain higher license
>grades.
>>
>>The ARRL leadership responded in 1963 with a simple proposal:
>> <remainder omitted for brevity>

You omitted it because it disproves your claims. The original ARRL proposal of
1963 bears little resemblance to what the FCC enacted. That's a fact.

>>FCC got many proposals from the amateur radio community. Some came from
>>individuals, some from other amateur radio groups. At least ten (10) of
>>these
>>proposals were taken seriously enough by the FCC to earn RM numbers (RM-378,
>>455, 470, 474, 480, 481, 516, 517, 538, 577). It was from these proposals
>>that the idea of subbands-by-license-class and other details came about.
>
>Where are these documents to be found?

Look 'em up - you're good at that. Or you claim to be.

Show us where any of my facts are inaccurate. If you can.
>
>>It should be noted that the FCC received over 1700 formal comments on Docket
>>15928, back when the US amateur population was about 40% of what it is
>>today.
>>This figure does not include those whose comments were part of RM-499 or
>>other proposals.
>
>Where may we confirm this with the US government?

Look it up. Anything I post will be rejected by you anyway.

>>And there was no talk of an age requirement for any amateur license.
>
>How many six-year-old licensees were there in the 1960s? :-)

I don't know. Do you?

You have demanded that the FCC require all hams attain the age of 14 before being allowed to have any class of amateur radio license. Yet you have not shown ANY evidence or example of problems in the ARS caused by licensing people younger than 14.

Your demands were in reply comments to the FCC, buried at the end of a long document and timed so that others would not be able to comment on them within the FCC deadline.

Why should anyone find you credible when you cannot supply as single reason to enact age limit requirements?

I'm surprised CW lasted that long in the U.S. military.
>
>
Which is not to say that CW has completely disappeared from the high
seas yet. Apparently CW is still used aboard civilian ships from
undeveloped countries in Asia and Africa and it's been claimed that
the Russians also still use the stuff. Probably only for coastal
and/or intership comms. Which makes no sense to me because
current-tech 150W SSB marine HF xcvrs are available in profusion and
are affordable enough to be found aboard thousands of modest pleasure
craft.
>
>
I keep wondering if they're using of CW in the fishing fleets to
"encode" their whereabouts so that their competition can't figger out
where they are when they find a hot fishing spot.

Oh, I forgot you were the greatest DXer in the world. Forgive me.

Why wouldn't you look up the ones that you need? Do you choose to remain ignorant of where they might be, or do you get some joy out of stumbling up and down the bands hoping they might appear one day?

Perhaps they have no authorization where you've been trying to find them.

Why are you so confused?

> > > > > > > > Dave, you chase band/countries. I had one band. If DXCC is

You must still be confused. You claimed that you would continue to work
Frenchmen out of band even after you learned that they were out of band.

> > > > > > Part 97 doesn't say I cant' be DX or work DX

> How about HL9 operations? Are they governed by Part 97?

Still confused? How does being regulated by the U.S. relate to an entity
being DX or not being DX?

As a matter of fact, I don't think the FCC published a DX list. As close as the FCC comes is to publish a list of 3rd party countries.

> > FYI, the USA can be a DX country if you're in the Falkland Islands.
>
> Really? Who knew! BTW, I'm not in the Falkland Islands.

Yes, really. Does it really matter where you are? You are the greatest DXer ever, wherever you are.

> > > > > > > > > Are you saying that my DX QSOs aren't any good because I didn't

Wow! Dave laughs at DXCC. The greatest DXer of all time laughs at the very
award system that makes it all possible. The greatest DXer of all time
laughs at all of the little people in DX that makes it all possible.

Dave, when I look at the DXCC list, I swear G-land is on there. If I fill
it by a 12.73 second QSO vs a 12 minute QSO, what's the difference to you?
The DXCC desk counts it, but then you would laugh at them and me.

That smug attitude of yours sure shines through.

> > > > Do you work them two at a time? five?

> on CW. I'm sure that an experienced DXer like you has done much better.

Dave, you must be confused again. I've never made that claim.

2 or 3 a minute is about as fast as I can write them in my log. The Heil
headset and footswitch was a big help.

Dave, am I the only amateur that you consider not to be a DXer? Please make a list of all the amateurs who work DX that you consider not to be DXers.

You can start with the ones who buy new homes in restricted neighborhoods.

Perhaps we need to bring back debtors prison and sell our children into
indenture?

People behave financially irresponsible (stupid) every day.

That's a good one. Has he ever performed any public service?

Perhaps Gallagher should stick to smashing watermelons.

Dick and Larry claim that behavior toward them is the very reason for their
outrageous behavior on RRAP.

Good point Jim. I don't know if I totally agee about the 'legal'
signals...hi. But that is not something you can prove unless your sitting
in the FCC van in front of his house. In anycase I have NEVER had a legal
limit amplifier in my over 40 years of ham radio.

When the power limit was 1KW DC INPUT I didn't even own one. Now its 1.5kw
PEP output...wow. And my poor little 800 watt output Ameritron don't even
compete eh? I do just fine on DX and contesting, mostly barefoot. And at
times the extra s-unit or so helps.

Real hams only run what is necessary to maintain the communications. The
ones that don't are, IMHO, just CBers with a ham ticket.

Dan/W4NTI

Larry's all talk and no action at all, Robert. He sits behind his AOL
internet account, behind his store-bought computer, in his apartment, after
a day's work driving a bus around and little or no CW work at all on his
manufactured ham radio through his manufactured antenna; then gets his rocks
off by pretending he's anything but equal to the rest of us.

I'd say for attitude alone most of us are far superior hams (and humans) to
the likes of Larry Roll. I'm pretty sure most people know hypocrisy when
they see it. Most people can even pick representative forms of hypocrisy ;)

Kim W5TIT :)

Oh, yet new hams and longer-licensed hams *aren't* supposed to "take
advantage" of the new licensing structure. Did I say hypocrisy in other
post? Larry, you're getting less and less lucid and more and more
transparent.

From the other side, -any-of the contiguous 48 states qualify as a DXCC
entity, but only once, not 48 times. Hawaii and Alaska are counted
separately.

BTW, there are virtually no
> amateurs running in excess of the authorized 1.5 KW for the simple reason

'zactly. Whole codetest thing has become a nonissue for anyone with any sense. FCC has spoken, their hands are tied by S25.5. Codetest will go soon after S25.5 does, which will likely be 2003.

Until about 5 years ago, maritime regs required that all ships over a certain size have 500 kHz Morse capability. That meant trained ops, shore stations, the whole bit. GMRSS replaced it.

On the other hand, when someone demands that the FCC impose a minimum age of 14 as a requirement for a ham license, that's
a real policy issue and a threat to the future of the ARS.

Dan, so many people forget that DX is only one facet of amateur radio. There are the moonbouncy guys, the FM guys (yep, I'm one of those, even with the extra. I enjoy the local folks, have talked to England and Australia via the 10 meter port, and the darn thing came in handy when all of the telephone lines died at the company one interesting evening), the slow scan folks, the fast scan folks, and a lot of half-fast scan types (likely me included!). We have fun, however ;)

I don't find his remarks denigrating to the amateur radio service. He is quite selective about certain types within the amateur radio service to denigrate. I am unaffected as I'm not a Snooty Extra Class amateur.

If you find his remarks denigrating, then he has hit his target.

Because of an irrelevant code exam. Jims says it will be gone in 2003.
That is next year.

Larry's attitude make him inferior to even his despised no-code
hams.

My insight tells me that you blew smoke. You didn't pass all the
required exams or you would have been rewarded. That you didn't pass
rests on you, not on the person making note of it.

I've never stated that I didn't look up allocations for countries I've
needed on 80 or 160m.

>
> Perhaps they have no authorization where you've been trying to find them.

I've never stated that I didn't look up allocations for countries I've
needed on 80 or 160m.

> Why are you so confused?

Probably because I've been dealing with your cryptic material.

> > > > > > > > > Dave, you chase band/countries. I had one band. If DXCC is

band even after you learned that they were out of band.

I need only concern myself with operating where I AM PERMITTED TO
OPERATE. I've only made this statement about eight or ten times. Maybe
you'll pick up on it by and by.
>

being DX?

I certainly am confused on this one, Brian. Your own comments were
"Part 97 doesn't say I cant' be DX or work DX until I'm an Extra, does
it?" Part 97 doesn't deal with "being DX" at all unless you happen to
be in a U.S. territory or possession.

>
> As a matter of fact, I don't think the FCC published a DX list. As close as
> the FCC comes is to publish a list of 3rd party countries.

That's right. The FCC doesn't regulate your operation from Somalia or
tell you that you can't operate from there with or without an Extra
Class ticket either.

> > > FYI, the USA can be a DX country if you're in the Falkland Islands.
> >
> > Really? Who knew! BTW, I'm not in the Falkland Islands.
>
> Yes, really. Does it really matter where you are?

Yes, it does matter.

You are the greatest DXer ever, wherever you are.

If you choose to think so, that's fine by me, Brian. In fairness, I've
never made such a claim nor would I do so. I think I can safely make
the claim that I know more about DXing than you.

Your stuff isn't even coherent anymore. Your question about Somalia
being a U.S. possession was strange. Your added comment is waaaaaay out
there.

No, Dave laughs at Brian.

> The greatest DXer of all time laughs at the very
> award system that makes it all possible.

No, I'm laughing at a guy who ragchews with England and calls it DXing.

> The greatest DXer of all time
> laughs at all of the little people in DX that makes it all possible.

Who is the greatest DXer of all time? Was it Don Wallace?

> Dave, when I look at the DXCC list, I swear G-land is on there. If I > fill it by a 12.73
second QSO vs a 12 minute QSO, what's the > difference to you?

No difference, Brian. Let me know about you 12 minute QSOs with the
Laccadives, Glorioso, or North Korea. I can hardly wait. It'd be even
better if you manage to disrupt a pileup to make them.

> The DXCC desk counts it, but then you would laugh at them and me.

No, I'd only laugh at you. I promise.

> That smug attitude of yours sure shines through.

Don't forget that you'll be able to hear the peals of laughter--probably
without the aid of a radio receiver.

> > > > > Do you work them two at a time? five?

I'm deferring to your vast experience, Brian. There's not much that a
guy like me could show a master such as you.

> 2 or 3 a minute is about as fast as I can write them in my log. The Heil

How might that be accomplished with the two of us separated by some
thousands of miles? Is this another of your DXing secrets?

Well, which ones, Brian? Which would know you and why would those
persons make such an incorrect statement?

the amateurs who work DX that you consider not to be DXers.

You are not alone. There are many amateurs who enjoy ragchewing with
distant stations but who are not DXers.

> You can start with the ones who buy new homes in restricted neighborhoods.

That'd be a short list. Those guys have a tough enough time ragchewing
with domestic hams.

>outrageous behavior on RRAP.

Brian, it's just another little nail in the coffin called "double standard."

One cannot say anything bad about the ARRL for any reason
because they ARE amateur radio. How does everyone know?
Simple. ARRL says so, therefore it is sacrosanct. :-)

Dick did his military experience going to military school on TV
production, then confused teleprinter telegraphy with manual
morse telegraphy and said that national police departments
had "networks" of [manual] "CW." Before that he claimed
ignorance of the 1947 paper by Claude Shannon outlining
the relationship of bandwidth-noise-information-rate which has
been recognized everywhere else in world communications as
observable-useable truth and called "Shannon's Law." Then
he belittled everyone who replied to him expressing disbelief
at his opinions. Constantly.

Larry has extolled his inherent wonderfulness for years, citing
himself as a paragon of discipline and motivation and
accomplishment. During his after-service schooling he
made much mention in here of his deeds and accomplishments
as a Human Resources (aka "personnel") student and his
job offers just waiting for him after graduation and his assured
future. He has also repeated the urban myth of "new technicians
not coming up with new state of the art in amateur radio 'as
promised by them'" (a double-layered myth actually) and then
never showing any evidence of doing such original work despite
a long tenure as a licensee. Unlike Dick, Larry does little
outright belittlement of others by choosing to elevate his own
self-worth outrageously higher than others...all others are

belittled de facto by simply existing. Apparently driving a bus after achieving soma cum loud grades does things to a mind.

There are others, of course, such as a fairly-well paid employee of an pseudo-theological seminary arguing for the divinity of his order...the holier-than-thou ex-government employee who has clearances and needs to know denied ordinary mortals...the unspecified-job, unspecified-employer, morseodist and champion of the empty-state technology of ancient times who pretends to be an eightysomething guru four decades ahead of himself.

Curiously, all have the Sign, the 1x2 call obtained through the Vanity regulations. :-)

Halleluja!

>>radio, especially ham radio policies.

Correct in the Order of the Church of St. Hiram. Manual telegraphy is
the epitome, the essence of the high art in amateurism. So goes the
catechism and the mantra.

>'zactly. Whole codetest thing has become a nonissue for anyone with any sense.
>FCC has spoken, their hands are tied by S25.5. Codetest will go soon after
>S25.5 does, which will likely be 2003.

So sayeth the Prophets in their divine wisdom.

>Until about 5 years ago, maritime regs required that all ships over a certain
>size have 500 kHz Morse capability. That meant trained ops, shore stations,
>the whole bit. GMRSS replaced it.

GMDSS, your holiness. Global Marine Disaster Safety Service.

GMDSS became mandatory with IMO (International Maritime
Organization) member nations on 1 February 1999. It is a
component of SOLAS (Safety Of Life At Sea) planning that is
part of a larger effort that began with the first SOLAS convention
in 1974. You may find more information on that at www.imo.org

>On the other hand, when someone demands that the FCC impose a minimum age of
14
>as a requirement for a ham license, that's
>a real policy issue and a threat to the future of the ARS.

As far as I'm concerned (a mere citizen of the US, a US military
veteran, registered voter, etc.), I made my case back in 1999 and let
it rest afterwards. Correction: TRIED to let it rest until the
Catabolic Clergy got their horse-beating sticks to vent Outage.

If their Divine Holinesses wish to have mature, cogent, ethical,
prodigy six-year-olds passing amateur radio tests, then they are
welcome to them. No doubt they consider six-year-olds as a
shining example of the maturity of their "service."

Ho hum.

writes:

>>So, you are the Judge of what is acceptible and not-acceptible in this
>>unmoderated newsgroup?!?
>
>Where do you get that idea?

By your general message content. :-)

Anyone's opinion different than yours is "mistaken," "in error," "incorrect,"
otherwise dismissed.

>>I've been honest about my descriptions of US Army communications in the
>>1952-1960 period.
>
>Prove it. Why should anyone accept your "honesty" when you don't accept
>theirs?

Most of my references to US military communications have been posted
in here already. If you wish to judge those as "lying," "inaccurate," or
"mistaken," then there's no discussion with you possible.

As far as my personal military service is concerned, the United States
government, the states of Illinois and California, the California counties
of Ventura and Los Angeles have independently checked my military
records and found them to be as I stated. I could offer to scan my
DD-214 (release from active duty authorization) and send that in private
e-mail but no doubter-challenger seems to be able to receive, unpack,
or acknowledge any private mail receipts.

I have a number of photographs, both personal and Signal Corps photos
(so marked on the back in a sort of "mimeo" stamping) showing my
station equipment, personnel (including myself with SigC identification
on photo back), with sufficient imagery content to identify the time and
place. The quantity of those available precludes any reasonable request
for copies through any means.

I have made a 30-page text-and-image description of one part of my
military service concerning assignment at Army station ADA. I have
mailed copies of those to individuals who seemed reasonably
interested in communications of the 1950s. Ed Hare was sent a
copy although he has never acknowledged receiving it. I will mention
that Eugene Rosenbaum, N2JTV, was in the US Army and serving
at the same time as I and in the same unit and at the same station.
We have recently corresponded by mail and talked by telephone.
I haven't mentioned this to Gene but I feel satisfied that he would

confirm that I was, indeed, doing what I said I did.

I've given other references in here before, including the names and calls of radio amateurs, but no one seems to have contacted them. I'm not sure of how much "proof" is necessary for you, so I have to become repetitious (no doubt boring to others) on my explanations. That's unfortunate but you keep demanding "proof" or make the following statements -

>Not me. I've said you are mistaken about other things.

It seems almost Standard Operating Procedure that, whenever I say something in opposition to your opinions, you label them "mistaken," "incorrect," go into long diatribes such as "that has 'no' relationship to amateur radio." :-)

>>You are unable to cite any sources other than amateur radio
>>publications. You have been given information sources for the rest
>>of the radio world in here, yet there is no sign you have accessed
>>any of them.
>
>Why bother to cite sources? You won't accept them anyway.

I will go to sources and examine them if available. Good research into anything requires that. I will not accept opinions as facts and treat them as any arguable subject. I will certainly argue alleged factual statements which, by design or error, omit the entirety of statements so as to misconstrue its meaning (sin of omission).

>Why? You wouldn't accept it anyway.

Petulance, as quoted above, is not a positive attribute.

>So, you are the Judge of what is acceptible and not-acceptible in this
>unmoderated newsgroup?!?

Petulance, as quoted above, is not a positive attribute.

>>This whole thread "started" with a lot of bitching and whining over some
>>alleged "age discrimination" given in a comment on NPRM 98-143.
>
>Not "bitching and whining" but a simple statement of the facts, which prove
>your prejudice. Where do you get "age discrimination"? Is that a quote? Show
>your source.

No, sorry, you haven't "proved any prejudice" by bringing up an item from my comment on 98-143 back in 1999. What you re-started was a minor flame war over AGE originally ignited by Hans Brakob a few years ago. My reason for an age limit was given back in 1999 as the case of two six-year-olds who passed amateur radio tests.

>>All "discussions" in unmoderated newsgroups are free-form; i.e., they
>>can take directions determined by the participants.
>>

>All I did was ask a question.

Oh, I think you do rather more than that. :-)

>Because it would show how long the various military branches required it even
>though they rarely if ever used it.

The US Army has no horses in Armored Cavalry. There is only one
military horse unit and that is located somewhere in the DC area,
used only for ceremonial purposes. The Abrams and Bradleys do
the job in Armor now just as voice and data do the communications
jobs. Morse code has long since been relegated to largely
ceremony, ceremonies performed and praised outside the military.

>>There was no morse code used by the US military in the Gulf War.
>
>Were you there? How do you know for sure?

Industry trade magazines, classes at West Point, statements
of the US military have never, ever mentioned the use of morse
code in the Gulf War...not even from "behind enemy lines" by
various special forces as once alleged by a self-described
"colonel" in the "reserves" in here. :-)

The communications methods actually used in the Gulf War
have been extensively described in electronics trade magazines,
Signal (the US Army Signal Corps magazine, available to civilian
subscribers), on US Army websites, pictured in FM 24-24 (1994,
available for public download), described in print (along with
photographs) by many individuals who were there ranging from
Hughes Electronics field engineers to US military officers.
There had been some debate in the military and industry
concerning the data systems, but that largely concerning plans
and policy and methods which, at their worst, were far superior
to any morse code methods.

>>>How does any of that relate to your demands to the FCC for an age
>>>requirement for a ham license?
>>
>>It doesn't.
>
>Then you are misdirecting.

I thought I had quit that in 1999. It seems that all those old-timers
who got into amateur radio as (mature, ethical?) young teen-agers
were Terribly Furious (!) at such heretical demands...to the point of
making a strange biological product our of a dead, beaten horse
and a sacred cow. :-)

>Where DO you get these wild ideas?

From the outpourings of the cowboys taking care of all the
sacred cows in this newsgroup. :-)

>>How do you "know" what the FCC knew at any time?
>
>How do you?

I don't. I only see the public records and judge from those.

I don't claim telepathic powers or other paranormal attributes
which seems to be claimed by old-timer moresodists. :-)

>>Under 97.1, Title 47 CFR, you will find political statements that relate to
>>the amateur radio service as "providing a pool of trained operators" for the
>>nation.
>
>Put there by whom?

All of the FCC regulations were written by the FCC.

If you now state (gleefully?) that "the FCC made them, see?!"
then you would negate the people's ability to input their desires
to the US government and have laws and regulations made.
You and most other readers know that sort of response is a
prima facie exhibition of Extreme Literalism.

Strangely, such Extreme Literalism would also negate all the
lobbying efforts and influence of the ARRL to enact certain
changes in amateur radio service regulations. If the FCC is the
"only one" who made regulations, then the ARRL could not
credit itself for getting such changes.

>>If the US military did NOT require morse communications then that "pool"
>>would not need tested ability at morse code.
>
>The military is not "the nation"

The United States military is damn well a PART of the United States.

A very LARGE part. In the middle of year 2000 the strength of the
US military was 1 1/3 million on active duty throughout the world.

In the middle of 2000 there were over 24 million living civilian
veterans of the US military.

>>>INCORRECT. Pure wishful speculation on your part, driven by your ignorance
>>>and anti-ARRL/anti-Morse code bias, bigotry and prejudice.
>>
>>NOT "incorrect."
>
>It's INCORRECT.

Tsk, tsk, petulance again. :-)

I'll ask again, didn't you forget charges of heresy or treason? :-)

>> I stated an opinion based on observation and evaluation.
>
>Based on pure wishful speculation on your part, driven by your ignorance and

>>(or against your claims) of who wanted what during the 1960s. DC is a lot
>>closer to you than to me. :-)
>
>In other words, you know I'm telling the facts.

Hardly. I see a lot of chest-thumping and patronizing arrogance
against someone who would brazenly dare such a renowned
amateur historian. :-)

I've never been to the FCC's Reading Room, but during the 1960s
I did subscribe to lots of FCC literature. Back then one could
subscribe (through the US GPO) to all the FCC radio regulations,
receive "updates" of each Part as they were made. That was in
3-ring-binder loose leaf form, convenient when the Regulations
were small relative to the 1990s. It got to be a bit much after a
few years, my jobs didn't need all the regulatory information any
more, so I stopped the subscriptions and tossed the lot.

Mea culpa! I should have had the foresight to "know" I would
encounter a renowned amateur historian in the future who would
try to show me the Error of My Ways!

>>Sources? The entire output of the trade magazines of the period from the
>>end of WW2 to time-now...the statements of the FCC itself since they
>>have put up a website.

>
>The FCC had a website in 1965?

No, but one could get subscription service from the USGPO. One could also (in this area) drive down to Long Beach and bother the surly secretaries down there into reading the latest. Since they weren't open on weekends, I went to subscriptions...better than subscribing to the Federal Register that contained a whole mess of info on things I didn't need. NTIS was fairly new then, beginning in their growth of becoming the enormous technical literature source they are now. The principal electronics industry periodicals were McGraw-Hill's Electronics, a biweekly magazine (I subscribed for about a decade), Electronic Design News (to become "EDN" in a name change), Electronics Design (still using the same name), Defense Electronics, and a couple of newcomers. I was also a Barron's subscriber, but more for stock and bond information rather than electronic industry stuff. Newsstand periodicals were more or less the same as now but with different organization and names...Radio and Television News, Radio-Electronics, CQ, 73. At big newsstands there might be Radio Communication magazine from across the pond. I haven't covered the EIA newsletters or High Fidelity or Audio Engineering or the magazine of the NAB.

>>Certainly in the last four decades, the number
>>of new radio services have increased considerably more than at any
>>previous time, plus those existing radio services have changed, added
>>more and different technologies in their operation. The result was a
>>substantial workload addition to the FCC's regulatory task.
>
>Yet FCC was making the amateur regs more complex all throught the '60s and
>'70s. For example, FCC made the regs for amateur repeaters quite complex in
>that time period.

At no time were amateur radio regulations ever as large and complex as most of the other Parts. You could evaluate that any way you want but it was so. :-)

>>>Do you think the public service contributions of amateur radio are not
>>>important?
>>
>>Not in the overall picture of "public service" communications involving
>>public safety, search and rescue.
>
>Well, there you have it.

No, discounting the "we are the greatest" membership propaganda the scanner enthusiasts had their input from the growing public safety (police, fire, paramedic, etc.) radio services. Go back to the mid-1960s and see just how many Public Land Mobile Radio Services existed. At the same time anyone could listen in to amateur radio communications and hear the hobby aspect as the overwhelming content with hardly any "public service" comm.

>>Was there a large national amateur radio membership organization other
>>than the ARRL in the 1960s?
>
>Nope - nor is there one now. But the FCC based much of the structure of
>incentive licensing on proposals by small roups and individuals.

Of course...you state that as an undeniable fact...as a not-ever
employee of the FCC. :-)

Oh, maybe you were a member of a small roup?

>>I haven't seen any numbers in those claims.
>
>98-143: ~2200 comments. US ham population ~675,000. One in 306 hams commented.
>incentive licensing: ~1700 comments. US ham population ~265,000. One in 155
>hams commented.

Tsk, tsk. More than 2500 documents in the last listing I saw (last year) on
98-143. Some of those had more than one individual per document. The
ARRL commented many more times than once. The INDIVIDUALS who
commented are all listed in the final Restructuring Report and Order. A
more accurate number of those commenting is found in that. Please try
to be ACCURATE.

>WHY? You won't accept them anyway.

Now, now, exhibiting more petulance... :-)

>You omitted it because it disproves your claims. The original ARRL proposal of
>1963 bears little resemblance to what the FCC enacted. That's a fact.

Of course...the FCC is the Big Bully. :-)

And the ARRL is the Big Brother to protect all the little hams from Big Bully.
:-)

>>Where are these documents to be found?
>
>Look 'em up - you're good at that. Or you claim to be.

Well, I tried to look them up in the FCC ECFS and a general search.
Unfortunately, I don't have all the time in the world to sit and do the
endless corrections of your mistakes by endless quoting of the
regulatory sources...so I asked "where are these documents to be
found?"

Should we all do a comprehensive summary of a thousand-plus
documents on a 30+ year old regulatory matter? Exactly what
would such accomplish? Your "vindication?" Vindication from
what...an OPINION that wasn't shared?

>>Where may we confirm this with the US government?
>
>Look it up. Anything I post will be rejected by you anyway.

Now, now, Jimmie...I've already spent quite some time correcting
this post. If you want to pay my fare to DC to search through
the FCC Reading Room content for a couple weeks, fine, but
include meals and incidental expenses, too...but I don't have all
the time in the world to massage the egos of the hidebound.

>>How many six-year-old licensees were there in the 1960s? :-)
>
>I don't know. Do you?

Weren't there two six-year-olds licensed in 1998 and shown on
the ARRL web page news along with their kindly VE?

>You have demanded that the FCC require all hams attain the age of 14 before
>being allowed to have any class of amateur radio license. Yet you have not
>shown ANY evidence or example of problems in the ARS caused by licensing
>people younger than 14.

I'm not "demanding" a thing, old-timer. I made a SUGGESTION, a COMMENT
back in 1999 and let it sit on public view along with other commentors on
98-143. A lot of outraged I-got-into-ham-radio-as-a-teen-age-boy-wonder
types have been beating the hell out of that poor horse ever since. :-)

>Your demands were in reply comments to the FCC, buried at the end of a long
>document and timed so that others would not be able to comment on them within
>the FCC deadline.

On the contrary. I didn't "time" anything except to TRY to get it done in time
while occupied by a great number of other, more-important personal tasks.

Nothing was "buried," everything was out in the open. I submitted the
requisite
number of copies plus a disk with text in an acceptible word processing format.
Everything that I submitted is all accounted for in the FCC's own
acknowledgement in the public record. It was all sent via USPS registered
with receipt of delivery returned before the deadline.

Had I known ahead of time that there would be so much necro-equine
flagellation about a 3 1/2 year old "issue" by such outraged egotists, I
would have saved the returned receipt, scanned it, sent it to all the righteous
so they could then ignore that document receipt and pretend to be victorious.
:-)

>Why should anyone find you credible when you cannot supply as single reason
>to enact age limit requirements?

The reason was supplied to the FCC 3 1/2 years ago and remains on public
view. A picture of two of the reasons is still visible on the ARRL website.

2449. Re: Why I will never ask a DXCC award

I know Jim.....HF is ham radio to me and a lot of other folks. But...I also do VHF FM, CW and SSB. I do SSTV, I do PSK31 and RTTY. And I'm slowly working toward a good satellite and maybe EME setup.

So, IMHO, HF is where it all began. Hopefully its not where it will all end.

Previously you've told me that you just find them by tuning about. Now you
are claiming that you've looked them up. My only confusion is what to
believe, what you said then or what you are saying now.

Cryptic as in when I look up authorizations its a bad thing indicating that
I don't know much about DX, or cryptic as in when you look up authorizations
because that's what a smart DXer does?

> be in a U.S. territory or possession.

No wonder you're the greatest DXer in the world.

Please tell us what Part 97 has to say about being or working DX. What does
it recommend for me to get my SSB rate up? Does it say I should stay with
the foot switch or should I use VOX?

I think Part 97 doesn't say squat about DX, but you're free to interpret it
any way you like.

> > As a matter of fact, I don't think the FCC published a DX list. As

As a matter of fact, there was no regulatory authority in Somalia when I was
there. So what was your point?

> the claim that I know more about DXing than you.

But how much more? Let's quantify it.

On a scale of 1 to 100, with 100 being the most brilliant DXer ever, where
would you place yourself?

> > > > > > > > > > Are you saying that my DX QSOs aren't any good because I

> there.

It was your comment that was incredibly strange. The US government has no regulatory authority in Somalia. Why did you bring it up inside that relationship?

> No, I'm laughing at a guy who ragchews with England and calls it DXing.

And if it checks off the box that says: "G" it doesn't count? You might
want to call the DXCC desk on that one, Dave. Your credibility is slipping.

> > The greatest DXer of all time
> > laughs at all of the little people in DX that makes it all possible.

But I'm a neat freak. The writing has to be good enough that I can confirm
them a year later when the cards start rolling in from the buro.

Dan, I don't want to correct ya, but .... amateur radio began much below HF.
The important folks wanted that spectrum and gave the hams the 'worthless'
space. BWAaaahahahaha!

73 from Rochester, NY

Heck, I'd just buy a can of red, blue, and yellow paint. Voilla! 10
seconds and the cube is 'fixed' (if not solved). It ain't the size of the
ship, it's the motion through the ocean!

There is the story of the Math major, Physics Major, and Business major who applied for the same job. In the pre-HR days the Personnel Mgr told them he could not select among them so he gave them each a ball of string, a lead weight, and a stopwatch and said that the one who could tell him the height of the building the closest would win the job.

Pretty soon the Physics major came back and announced the building was 246 feet high give or take 3 feet. Right behind him came the math major who announced it to be 247 feet give or take one. Seems one had simply dropped the weight over the side and timed it, the other had built a pendulum.

Then the business major said this building is 246 feet, 7 3/4 inches high. 'That's right!' said the personnel guy, how did you do it? Simple, said the candidate, I went downstairs and bribed the maintenence guy with the stop watch to give me a look at the plans.

As Larry tells the NCT's who ask "stupid" questions; Go look it up at the
> FCC or ARRL web site.

I beg to differ. Larry has been very accomodating to providing everyone who asks for a little refresher information on this ng. On the other hand, one N0iMD tends to launch into one of his well known episodes whenever someone asks a question that he (thinks) he knows the answers to but the requester does not. I completely disagree with with you on this post, Brian.

The R1051 was most definetly a totally NEW receiver. All solid
state except for one or two RF preap tupes. Each R-1051 replaced an R-390
which was then removed from the ship.

Dann, beg all you want, Larry isn't about to change his spots or turn over a
new forest. But at least he doesn't direct pornography toward other
RRAPpers as you have tried to do. Just stick to the stupid questions and
you'll not get in trouble with your ISP.

Brian, guess what? You never received materials that would offend your
alleged moral sensibilities. I never got in trouble with my ISP as I did not
violate their TOC's. However, some of the direct ad hominem postings I have
seen on some of your postings not only open you up to Prodigy TOC violations
but actual criminal liability for slander. If you wish, I can reporst them
to this ng whenever I read them, and I will copy Prodigy as well. I will be
constantly vigilant for everything you post. How do you like that? Deal?
After all, TOC's are TOC's and the Law is the Law. For one so "sensitive" to
"immoral" perturbations, I'm sure you you should have no problem with my
volunteered surveilance of your accusations and demeaning comments to anyone
who disagrees with you.
Your Ham Buddy

Curiously, you must have taught your research style to Mini-Me Burke.
I do not have a 1 x 2 callsign obtained through the "V"anity
regulations. No doubt your claims regarding the calls of others is also
questionable. Double :-)

You've also left out some important players: The casual op masquerading
as DXer and the bile-filled non-ham as pretender in the world of amateur
radio.

Another ad hominem attack. Well, this won't violate your TOCs per se but it
does get close to the edge, as you know. Prodigy does not like participation
in flame fests when it involves users' names. Did you have a falling out
with people who enjoy Morse code? Just asking.

>The same is true of "dishonesty." But when you claim dishonesty you're
>going to be asked to back it up. So, back it up.

I've already archived the back-ups in here in previous repetitions.

I call hypocrisy as dishonest. ARRL claims leadership of [US] ham radio
but their leadership actions seem more to be following what other
countries have done in nurturing technology or achieving more bandspace.
Gave that in another message today.

>> Propagandists "blow smoke" all the time.

>Yes, they do, don't they?

ARRL uses propaganda very effectively. They came out on top as the
national amateur membership organization before WW2 and they
remain with a virtual monopoly on that to this day. It is still
propaganda just as marketing has hype and political arena has spin.

>ARRL produces material intended to introduce people to radio. If you think
>that is directed at radio professionals, you are deluded.

Are professionals undesired? "Now You're Talking!" :-)

>> Not only that, the ARRL pretends to be some sort of governmental
>> surrogate (too strong a word, perhaps) or at least an "assistant to
>> government" in amateur radio regulation.

>I'm not aware of that language ever having been used, but it's certainly
>true that ARRL is active in the regulatory process.

Try not to evoke the Extreme Literalist. Things written in quotes have
to be substitutes for underlines, italics, or bold-face type not yet
available in Internet newsgroups.

The "surrogate" comes from acting the necessary intermediary between
government and the individual citizen...as if the individual cannot go
direct to the government individually. It there a need to have an ARRL
official rulebook concerning Part 97 regulations? Why? Anyone with
Internet access can go directly to the USGPO or FCC sites and obtain
the same regulations. Part 97 is one of the smallest sections in all of
Title 47 CFR. Why use the word "official" at all without denoting it is
official only for the ARRL? It is only COPIED from the government.
Anything stated, printed, etc., by the US government is royalty-free and
the copyright laws don't apply. ARRL could copy the whole of Title

47 CFR if they wanted, say it is "official!" :-)

The "surrogate" comes from ARRL urging amateurs to contact their section managers to make their grievances with the government (on ham radio matters) known. Hams can go directly to the government agencies or their TRUE elected officials; the First Amendment gives them that right. Hey but going to ARRL officials is "official" and saves them from timidity in actually communicating with their government in person. Go to your section managers and not to your elected officials?

No doubt a few do view it that way. Some people wrap tin foil around their heads to keep out the alien rays, too. Both make about as much sense. - JB

>Hey, Len, I saw in ECFS where you had advised the FCC on what to do. Does
>that make you an Orwellian Big Brother?

No, I am just an individual citizen using my First Amendment rights. Big Brother in Newington doesn't appear to like that at all. Too bad.

>So, your complaint is that an introductory book on ham radio is, well,
>introductory?

No. But, coming from a late president of the ARRL, a suggestion to "find out about radio" was in poor taste, borderline civility to an already-working radio-electronics professional.

>I asked for evidence, Len, not more character assasination and baseless
>charges. Maybe the problem is that you just can't tell the difference?

No. You've just been both patronizing and sarcastic. No problem here.

I get the feeling that anything at all not in agreement with ARRL policy, statements, or everything else is "character assassination and baseless charges."

>Uh, Len, CW capability is a throw-in with just about any narrowband radio.
>I'd think that you, a radio expert, would realize that. So why would
>anyone building a narrowband radio for use in the Amateur Radio Service
>leave it out? And since CW is widely used in the ARS, what's wrong with
>publishing designs that implement it?

I don't, haven't billed myself as a "radio expert." I have a lot of experience in many areas of radio...and as a human being...to recognize the above for what it is. "CW" (on-off keying CW) is not a required mode according to the FCC, no more so that any other allocated mode on a band. "Widely" as in "widely used" is subjective and not quantitative. To say "in the ARS" would include the entire amateur bands above 30 MHz because it is not specific to the HF region. You made an unsubstantiated claim which does not appear to be true; i.e., that is dishonesty.

You want to misdirect away from my point that ARRL favors "CW" more than other modes. You do that misdirection by dishonest statements in a tone bordering on character assassination with baseless

charges.

>Would you favor supression of publication of information about a mode
>that's widely used and enjoyed just because you personally dislike the
>mode?

Irrelevant. I neither like nor dislike morse code. I think the morse code test for any amateur radio license is nonsense. I see no technical nor operational merit for morse code modes that favor its use over any other allocated mode. If you personally like the mode, fine. I'm not required to like anything you like.

>I'm not angry, Len, just disgusted. You keep making scurrilous charges and
>refuse to back them up. That leaves me shaking my head, not gritting my
>teeth.

Shake your teeth and grit your head if that makes you feel better. I'm not here for your entertainment as a radio noble like some jester...but that's what you are painting. Others have done the same but wound up as the fool. Join them.

Jon, you are simply unable to take negative criticism of your employer.

ARRL is a big organization with political orientation as well as a business. Sooner or later they are going to have to LIVE with folks who do not agree with them. ARRL and its officials cannot go and alienate individuals or groups by belittling them or making fun of them or whining about "scurrilous charges" or refusing to accept that there IS skepticism of their "honesty."

Remember that ARRL membership is still less than a quarter of all US radio amateurs and has been that way for quite a while. ARRL does not increase its membership by belittling or denigrating non-members...or of assuming patronizing, arrogant airs.

It hasn't increased its membership by using old methods, nor is it getting all it wants from the FCC. Consider that something needs to change to insure survival of the ARRL in the face of rising costs to stay solvent. No doubt attorney fee billing is going up and advertisers are being less generous in buying ad space. Not my problem. I don't have a salary dependent on a membership organization's revenue. Neither am I a member of the ARRL or a licensed radio amateur and the attitudes presented in here are not conducive to changing either.

I don't have a problem with negative criticism. I get that as a matter of course on a remarkable set of character assassinations, baseless charges, scurrilous insults from self-professed "superiors" in radio. I simply answer what I care to answer along with references and sources to prove facts...my opinions are my opinions based on my own observation and evaluation. I don't expect anyone to like them.

I AM having a problem with yourself and others not accepting observations and evaluations, of dismissing them with a royal wave

of the hand as if they do not exist. I can reply to demands for scans of proof of something and understand the demanders refusing to open them up and viewing them, and of making scurrilous charges of their being virus-laden and all other terrible things without bothering to test for those. That's par for this course.

Jon, you've shown a lengthy and tiring example of elements of a Belief System, of inherent honesty in that Belief that does not accept negative criticism. I didn't expect much else. I have other things to do than argue against Big Brother's faithful disciples about Beliefs.

2470. The ARRL in Bloom

> <jbloom@arrl.org> writes:

>I characterized your arguments, Len, not your person. Don't you know the
>difference?

Yes...I've been doing computer-modem communications since 1984 and
have been a sysop on two BBSs. Actually, I've been on ARPANET
earlier than that but that wasn't from my residence. I think I've seen close
to all the styles of "differences" you allude to, Jon, and I don't agree with
you. Try not to be patronizing.

>Do you think the postings are not coming from a person? Maybe you've been
>debating with an AI system -- and losing!

In some cases I'm almost certain that I've been communicating with
total artificialities! Of rational, civil human beings, that is.

>What does his behavior toward you have to do with your behavior toward
>other people?

They want the operative double-standard you've heard about. I have one
standard.

>It gives me a chuckle when you ascribe your own behavior to others.

I'm glad you are enjoying this. I find it feigned humor on your part and
really only a slightly-more-civilized denigration. Others on other places
have tried the same thing. It's almost SOP on newsgroups. Sometimes
it is effective...but only to those easily cowed. I'm not easily cowed.

>Changing the subject is your main tactic when you get cornered. Then when
>someone takes you up on the change, you accuse them of having changed the
>subject! (See the CR discussion above.)

I'm sure there are venues for Consumer Union elsewhere. Has Consumer
Reports ever published anything on amateur radio? I really don't know
since I quit subscribing to them years ago. This isn't the Consumer Union
newsgroup.

>> Explain again how using "Jimmie" can be construed as a "personal
>> attack."

>It's intended to belittle, Len, like much of what you post.

If sarcasm against dogma is to be treated as felonious, then I am guilty.
If remarks against conformity are considered uncivil, then I am one with

a civil rights movement.
If one must act the inferior in here, take orders, march in ranks, bow before self-professed "superiors," defer to their deserved noble status, then I lock and load, take aim and hit targets of opportunity that abound.
No problem, SIR. Do you have more targets, SIR?

Okay, then let's see you chastize a fellow amateur extra whose entire newsgroup stock in trade seems to be the belittling others.

I haven't yet been advised on a "proper" form of address for you.
Would you require "sir" as a honorific? Is a salute required?
How about "mister?" [or are you into water sprays?]
I think "your grace" or "your holiness" is a bit stuffy. What do you think? Please advise.

>You would like people to believe that because you think it will detract
>from my arguments. But all it really does is expose your
>pique/irritation/discomfort from being challenged to back up your claims
>with something substantive.

I don't think that Believers would believe the words of a heretic. Some think of my remarks as heresy. I don't think that hardcore fraternal members would tolerate any form of negative criticism of their fraternity.
If you think my opinions are without substance then we have no discussion. I'm sure you do...therefore you are simply lecturing.
No problem, that's a typical technique on newsgroups.

>I'm not interested in that exchange, Len. I routinely skip over the public
>squabble between you and Steve; it's pot and kettle as far as I'm
>concerned, and neither of you are doing yourselves credit.

That's a one-sided non-squabble. I don't have any worries about "credit" or a "credit rating."

>What I am
>interested in is whether you will present any specific evidence of the
>dishonesty with which you have changed ARRL.

No, you don't appear interested in anything of the sort. This isn't a "moot court" where you can be both judge and the prosecution, forbidding "evidence" because you don't like it. I've presented only my opinions, not charges of commission of a felony.

You "want something substantive." Material things have substance. Mental things have no substance. The ARRL has survived and prospered partially on manipulation of intangible ideas, opinions, and some outright propaganda for years. In the advertising business that is called "good marketing." In the political arena it is called "spin."

>I'll explain it to you again, Maybe you'll get it this time. It's a simple
>matter to verify many of the statements made by ARRL. (Do you agree, or
>are you claiming that everything ARRL says is a lie?) With a number of

>verifiable claims on the one hand and not a single instance of a dishonest
>statement on the other, a reasonable person, one not acting on the basis
>of an unchangable prejudice, could only conclude the ARRL is honest.

Ooooo...that's a very loaded "explanation!" :-)

Well done. "Unchangeable prejudice" was the crowning touch. :-)

>The same is true of "dishonesty." But when you claim dishonesty you're
>going to be asked to back it up. So, back it up.

Okay, in the same vein or possibly in vain, I could reply that "the lying
ARRL is always honest." :-)

Not good, unpolished, but about as loaded as your own demand. It's
oxymoronic, can use a sniff from an oxy bottle. I don't have all day
to argue the subject, prepare a tort or have a tart type it up.. This
isn't even moot court with some rules of evidence. My opinions are
based largely on the propaganda output of the ARRL over the years,
many cases of reporting issues plagued by sins of omission of other
parties involved, and always, always the spotlight on the ARRL
being the unswerving, righteous do-gooder organization they always
claim to be.

Yes, the ARRL does indeed do good in some things for members.
ARRL provides a number of good services for members. Those are
described on their website, found in their publications, available from
staunch, believing hardcore members at the slightest hint of disbelief.

At the same time, and for a very long period, the ARRL has engaged
in subtle manipulation of minds that isn't readily shown on a few
newsgroup messages. Firstly, the ARRL has been the only amateur
radio membership organization on the national level for years. But,
notice the reaction of any member (or employee) to a competitor,
however slight, however focused on single issues or even attempting
to "represent" a group of amateurs. The reaction is almost primitive
to cast out the "stranger," to eliminate the usurper. :-)

You've seen it in here. Others have seen similar reactions elsewhere
in other venues. It's almost a "there is but one god..." reaction.

Such a reaction can only have been established by a long period of
being the single organization, having no competitor, yet continually
reminding readers of their "leadership" in sometimes patronizing
tones. Still, over that same period, the ARRL membership remains
at a distinct minority percentage of all licensed radio amateurs.

The argument of many members is that they represent the "elite,"
or simply that they inherently "know what is best for ham radio."
Either one is terribly self-serving self-righteousness. Another
argument is that "amateur radio wouldn't be here today if it
weren't for the ARRL!" That is quite false since there were a
number of "national" membership organizations in the early days

of radio. ARRL managed to survive as dominant prior to WW2
and has remained there through effective marketing of itself.
That marketing includes some sin of omission by not noting the
other competing amateur organizations in the ARRL "official
histories." That's not a "dishonesty" in the marketing or
psychological-warfare areas, if used effectively it ensures survival.

The "...wouldn't be here today" argument is really metaphysical,
involving alternate times-universes that never existed. No one
can predict the future yet so many falsely assure themselves that
the future is predictable by drawing on the past. In other words,
keep the status quo static so that the future is understandable by
being a repetition of what is known. :-)

The argument can be advanced with honesty that ARRL provides
technical information on amateur radio. It does. But so do some
independent publishers and some foreign publishers. The ARRL
seems to survive budget-wise from its publishing arm. QST is,
or should be, self-supporting through advertising sales and the
true demographics of subscribership (entire membership) allow
ad sales to function. Not like independent publishers unaffiliated
with membership organizations. Everything else in ARRL
publications seems available for a price (shipping extra if ordered
from Newington).

As an example, ARRL urges coming to the ARRL for PSK31
information. Yes, ARRL does have quite a bit of it. But PSK31
didn't evolve in the USA but was innovated years before by
Peter Martinez in the UK. Martinez is also the one who
experimented with the Gingell polyphase network for SSB a
quarter century ago and was written up in RSGB's Radio
Communication. QEX had some nice write-ups on that
network nearly two decades later, well-done, but the author
attributed it to another rather than Gingell (corrected on the
author's website). One goes to the ARRL for the new...?

I could cite spread spectrum techniques. The ARRL does have
a book on that. One can find more informative texts elsewhere,
clearer tutorials available through TAPR. Has there been anything
at all on other radio services' use of SS available from ARRL?
The US military land forces SINCGARS family has been
operational for 13 years now, is a frequency-hopper, operates
from 30 to 88 MHz with specifications found on two
manufacturers' websites, public, available to all. It even has
QRP-like features such as manual RF power reduction. It is
common in the US military as a land-forces small-unit portable
communicator. One can only surmise that ARRL knows best
in non-mention due to membership non-interest...?

Ah! ARRL has led the way to a promised new HF band with
a sliver band at LF (suitable only for very narrowband modes).
The "60 meter" band to be, already tested by a selected

few to ascertain its suitability for amateur operation! Yes, as if a 5 MHz band needed testing for suitability in radio. Nearly a half century ago I was operating HF in, above, below the 5 MHz region as a matter of course, something others had done two decades before me. Of course, at a time when valid propagation simulation programs exist, work, and have been proven accurate, are available free from NTIA, there must be a trial to test suitability?!?

The UK and Europe already has its LF amateur bands and those have been allocated for a while now. Where has the ARRL been on requesting similar things? Have they been working the 40m interference situation ongoing now for 23 years? Have they even lobbied for any increase in HF ham bandspace as they say they want in two NTIA future spectrum use reports? I've mentioned and referenced all of those "leadership" actions before...

I'm mentioned a lot of subjects involving ARRL as the "leader" of US amateur radio before. I can repeat some more of what has already been written in here but it's more fun to watch our cat have a hairball or check the progress of my hard disk defrag. Yawn.

>
>I thot it was gud 4 life.

Actually, it is, but that wasn't the degenerative point the little barking dog tried to make.

He's a switch-hitter between being an Extreme Literalist Unable To Detect Humor and an obsessive snarly frustrated sort who desperately wants three-up and two-down back on his sleeve again.

I got my First Phone back in March, 1956, and kept renewing it, the FCC sending me new ones along with the old ones. The back carries a list of stations worked at along with dates, attested to by a signature of the station's owner or technical official and a "grade" of Satisfactory or Unsatisfactory. The FCC changed the radiotelephone operator license to eliminate classes with everything combined into a General Radiotelephone Operator License commonly called a "GROL."
No problem, the FCC sent me one of those too. In modern radio communications it is now a mere formality and useful only in a few US radio services. I've never had to use my GROL. Ech...<shrug>
It might as well have been cancelled. :-)

What is pitiable is that the little barking dog opened a new subject thread demanding to see a scan of my license. He got a scan at 300 DPI in private e-mail, says he "deleted it" without viewing it. He got another scan at 150 DPI (smaller file by still quite readable) and hasn't said a thing about it. He'd rather bark little dog obscenities rather than actually get his demands... :-)

Actually, if you'll read some of the above exchange, YOU asked if you
should tune about the band. I wrote "Tuning works". You appear to be
arguing with yourself at this point.

> > > Perhaps they have no authorization where you've been trying to find

Cryptic as in: you seem to be arguing with items which you posted.

Let's try it again. I wrote "I need only concern myself with operating
where I AM PERMITTED TO OPERATE." Read what I wrote, not what you think
I wrote.

> > > > > > > > > > Part 97 doesn't say I cant' be DX or work DX

> > be in a U.S. territory or possession.
>
> No wonder you're the greatest DXer in the world.

It's flattering that you think so, Brian but I've already stated that
I've never made such a claim.

> Please tell us what Part 97 has to say about being or working DX.

I didn't initiate the gabble about Part 97 as it relates to being DX.
You did. You wrote: "Part 97 doesn't say I cant' be DX or work DX
until I'm an Extra, does it?" I don't believe Part 97 says anything
about being DX or working DX. Part 97 certainly doesn't, as I've

pointed out several times, have anything to do with amateur radio operations from places which are not part of the United States or its possessions/territories. If you are in the United States or its possessions/territories, Part 97 has everything to do with any and all of your amateur radio operation, DXing included.

> What does
> it recommend for me to get my SSB rate up? Does it say I should stay > with the foot switch or should I use VOX?

You claim that you're a DXer. Don't you know? Want some hints on bringing your 40m rate up?--your CW rate?

> I think Part 97 doesn't say squat about DX, but you're free to interpret it
> any way you like.

As far as my operations from Guinea-Bissau, Sierra Leone, Botswana, Finland, the Aland Islands, Market Reef or Tanzania, I didn't have to interpret Part 97 at all. I didn't operate under Part 97 or any other FCC regs. I didn't bring Part 97 up. You did.

> > > As a matter of fact, I don't think the FCC published a DX list. As

>
> As a matter of fact, there was no regulatory authority in Somalia when I was
> there. So what was your point?

We haven't gotten to a need for my point. You first need to make YOUR point. I'm still trying to figure out if you are simply trying to be cute or whether you're really thick.

> > > > > FYI, the USA can be a DX country if you're in the Falkland Islands.

>

> On a scale of 1 to 100, with 100 being the most brilliant DXer ever, where
> would you place yourself?

You aren't being fair, Brian. I don't need to compare myself with the
world's most brilliant DXer. I'm dealing with you. Let's compare your
DXing knowledge and abilities with mine. Put me at 100 if you like.
Now where do you fit on the 1 to 100 scale?

> > > > > > > > > > > Are you saying that my DX QSOs aren't any good because I

> It was your comment that was incredibly strange. The US government has no
> regulatory authority in Somalia.

I believe I may have pointed that out several times. It's nice to see
that you finally caught on.

> Why did you bring it up inside that
> relationship?

It was in response to your comment on what Part 97 says about being DX.
Tell us how your operation from Somalia related in any way to Part 97.

> > > > > > > > > > > > > > When I've got a pile-up, I run it.

I've not written that your QSO doesn't count, Brian. My credibility is
intact but I'm still laughing.

> > > The greatest DXer of all time
> > > laughs at all of the little people in DX that makes it all possible.
> > >
> > Who is the greatest DXer of all time? Was it Don Wallace?
> >
> David Heil., Tar Paper Shack, WV.

I've never made such a claim. I am a DXer though so you got part of it
right.

> > > Dave, when I look at the DXCC list, I swear G-land is on there. If I >

I can see where your neatly penned entries would be faster and cleaner
than entering the material into a computer log. I'm sure that most top
DXers also send their requests for needed countires and expect replies
via the bureau system. That makes lots of sense too.

> > > > > > > > > > > > > QSLing was a huge chore.

Your response carries the same weight as your "the F6 station, please
confirm that you're operating within your allocation. QSL?"

question?

I'm almost certain that I could persuade a number of them to answer it.
I'm almost as certain that the responses I'd get would not confirm your

silly claim that ragchewing is DXing.

> > > Dave, am I the only amateur that you consider not to be a DXer? Please

>
> And their country total is what?

Why not ask them? If ragchewing at distance is what they do, I'd guess
their totals are not high. Maybe, as is your idea, they only work 100
countries in order to qualify for their initial DXCC and then stop.
Maybe they just work 10m SSB. Maybe they simply spend so much time
bitching about their lot in amateur radio that they don't have time to
get on the air much.

Here's a site called "Bob's CB Radio, 10 meter Radio & Antennas".....
http://www.bobscb.com/bobs_cb.htm

Here's an editorial I found on a site for truck drivers........

http://www.layover.com/driverscorner/cbshop/0102.html
The Power Wars Continue
By Stan Wells

The history of 10-meter converted to CB radios
Back in 1975 the Federal Communications Commission (FCC) decided to add more channels to the Citizens Band (CB) frequencies. It went from 23 to 40 channels. The FCC also lowered the power limit in these frequencies from 5 watts to 3.5 watts. Shortly thereafter, the power wars began. It was soon discovered that the 10-meter Amateur radio was virtually unregulated. This gave rise to the Connex and Galaxy revolution. These radios were easy to convert to 11-meters which is the CB band. Additionally, they had 25 watts of power. They eventually captured nearly half of the sales in the CB marketplace with the addition of many other brand names to the field--some now offering as much as 250 watts of power. The current top seller is the General Lee. This radio is a copy of the Connex 3300 HP with the dual finals. This allows the radio to run both finals at the same time, giving nearly double the power output of the single final radio.

Which probably explains why the old police radios ended up in borough
maintenance trucks, and no one got upset about it.

I do "band scans" with my scanner from time to time. I don't, as a rule, program dead frequencies into it though. But I guess there are those that do. But your point does underscore the fact that no matter how clever you think you are, when you create your own "private" frequency on the PSB, the more your transmit, the greater the risk that someone will eventually hear you. What happens after that is a crap shoot.

I have a Kenwood UHF handheld that is programmed though the MIC jack via a programmer. The frequency range of that radio is something like 420 - 470 Mhz. I ended up using it on the 440 ham band.

So your claim that ARRL is dishonest rests solely on your opinion that it doesn't exhibit leadership. What an incredibly off-the-wall definition of "dishonesty" you seem to have! I say "seem to have" because it's clear that you're now only weakly scrambling for some hook on which to hang your defamatory accusations, having utterly failed to provide any factual support for them and having ducked every question intended to elicit such information.

>>> Propagandists "blow smoke" all the time.

What does your opinion of ARRL marketing have to do with your false charges of dishonesty?

>>ARRL produces material intended to introduce people to radio. If you
>>think that is directed at radio professionals, you are deluded.
>
> Are professionals undesired? "Now You're Talking!" :-)

Do you think the target audience of "Now You're Talking" is radio professionals? Gee, you ought to see the videotape courses ARRL offers. Those would *really* insult you!

And what does that have to do with your false charges of dishonesty?

>>> Not only that, the ARRL pretends to be some sort of governmental
>>> surrogate (too strong a word, perhaps) or at least an "assistant to
>>> government" in amateur radio regulation.

> Brother in Newington doesn't appear to like that at all. Too bad.

Considering that ARRL regularly encougages people to contact the FCC
directly with their comments, the above tirade is false on its face. Add
usurpation of government authority to the list of false charges you've
made against ARRL.

>>So, your complaint is that an introductory book on ham radio is, well,
>>introductory?
>
> No. But, coming from a late president of the ARRL, a suggestion to

> "find out about radio" was in poor taste, borderline civility to an

> prove facts...my opinions are my opinions based on my own observation
> and evaluation. I don't expect anyone to like them.

I'm still waiting for the "references and sources to prove facts" that support your claims of dishonesty and usurpation against ARRL. When can we expect to see them? Where is your citation of lies published by ARRL? All you've said is that you're insulted because you got a form letter response to a letter you sent 2 decades ago, that you are further insulted because you think that ARRL's introductory material talks down to radio professionals for who it wasn't intended, and that you don't like the fact that ARRL publishes information about CW. There's no dishonesty on the part of ARRL in any of that.

> I AM having a problem with yourself and others not accepting
> observations and evaluations, of dismissing them with a royal wave of
> the hand as if they do not exist.

They do not exist. Only OPINIONS and more malignant, baseless claims of dishonesty and usurpation against ARRL.

> I can reply to demands for scans of
> proof of something and understand the demanders refusing to open them up
> and viewing them, and of making scurrilous charges of their being
> virus-laden and all other terrible things without bothering to test for
> those. That's par for this course.

Sending a copy of your commercial license to Steve and Jim has nothing to do with the exchange between you and me. It also has nothing to do with your false charges of dishonesty and usurpation against ARRL.

> Jon, you've shown a lengthy and tiring example of elements of a Belief
> System, of inherent honesty in that Belief that does not accept negative
> criticism. I didn't expect much else. I have other things to do than
> argue against Big Brother's faithful disciples about Beliefs.

It's too bad you're tired, Len. But you can stop reading any time it gets to be too much for you. If you also stop making charges that are without supporting evidence, I'll have no reason to tire you further.

Jon, KE3Z

You made defamatory statements. But yes, it's true that you're presented
only your own opinions -- no facts to back them up.

> You "want something substantive." Material things have substance.
> Mental things have no substance.

Some do, some don't.

> The ARRL has survived and prospered
> partially on manipulation of intangible ideas, opinions, and some
> outright propaganda for years. In the advertising business that is
> called "good marketing." In the political arena it is called "spin."

What ARRL does is called "providing a service." Your problem with that is
that you don't want the services ARRL provides to exist because you think
that anything that helps Amateur Radio flourish somehow diminishes your
"professional" standing. That's a weird thing for you to believe, but your
repeated attacks on anyone who practices Amateur Radio, and particularly
on anyone -- especially ARRL -- who works to make Amateur Radio stronger
lead to that conclusion.

>>I'll explain it to you again, Maybe you'll get it this time. It's a

More repeated recitation of the same OPINION, always without specifics, in
the hope that if you throw enough mud, some of it will stick.

> Yes, the ARRL does indeed do good in some things for members. ARRL

> messages.

Ah, so subtle that only you and the unidentified and unidentifiable
teeming masses who agree with you can detect it! The rest of us poor saps
are under ARRL mind control! ("Whup-whup-whup" go the black helicopters!)

> Firstly, the ARRL has been the only amateur radio membership

What "competitor" are you referring to? Can you cite any examples where
ARRL supressed the formation of another national amateur organization? Oh,
I forgot, citing actual evidence is not in your line!

ARRL's success comes from having been effective at serving amateurs and
Amateur Radio. But to you, the people who believe that are just under ARRL
mind control!

> You've seen it in here. Others have seen similar reactions elsewhere in

> psychological-warfare areas, if used effectively it ensures survival.

I see, it's a sin (albeit not dishonest) for ARRL's official histories to document the history of ARRL rather than of other organizations! Tell me, Len, when you took US history in high school, did you complain that the course didn't discuss the history of Australia, too?

> The "...wouldn't be here today" argument is really metaphysical,

> (shipping extra if ordered from Newington).

Untrue. ARRL publishes a Web site that has thousands of informative documents available without cost (along with some that require membership). Shipping is free, too! :-) Or don't you consider the Web a publishing medium?

> As an example, ARRL urges coming to the ARRL for PSK31 information. Yes,
> ARRL does have quite a bit of it.

So, it makes sense to urge people to use the "quite a bit" of information provided, does it not?

> But PSK31 didn't evolve in the USA
> but was innovated years before by Peter Martinez in the UK.

> non-interest...?

First you condemn ARRL for publishing information about a mode it didn't
create, then you follow that up by condemning ARRL for NOT publishing
information on military use of a mode! Looks to me like your just in the
condemning-ARRL business, not applying any consistent concept of what ARRL
ought to be doing.

Apparently the FCC thinks so since they licensed the experimental
operation. Have you shared your outrage with the FCC?

> The UK and Europe already has its LF amateur bands and those have been

And, when the fruits of those were pointed out to you, you immediately ducked that issue as well.

> I'm mentioned a lot of subjects involving ARRL as the "leader" of US
> amateur radio before. I can repeat some more of what has already been
> written in here but it's more fun to watch our cat have a hairball or
> check the progress of my hard disk defrag. Yawn.

Yes, Len, you have mentoned a lot of subjects. You keep dredging up the same tired, inconsistent, often incoherent, charges against ARRL. Yawn, indeed.

What really bugs you about ARRL is not is supposed ineffectiveness. No, it's the fact that ARRL is effective, helping to keep Amateur Radio strong and vital. That's just the reverse of what you would like to see. I draw that conclusion from your attacks on the presence and practice of Amateur Radio and amateurs, from your attempt to get the FCC to impose an age limit so that young people can be kept out of Amateur Radio, and from your repeated attacks on the organization that is most effective in ensuring the continued existence of Amateur Radio. That's my OPINION, Len.

I am aware that ham radio began well below what we now consider HF.

I see the ARRL is putting out "200 meters and down" again. Lots of folks need to read that one.

Yeah, I would like a zip drive too. But did you check out the new
Mavica that records on mini-CD's? I tried one and it works well.

Jim Hampton, AA2QA, makes the telephone-line/frequency
analogy:

> ..... You pick up and find me talking with someone else
> - on the line YOU are paying for. Hey, buddy, this
> telephone wasn't being used! You've gotta share it!
> Hey, what is going on here? Now, I contact my other
> buddies in the apartment complex. We all stop paying
> our bills (why should we take a test or pay for a license?
> Ooops, I meant to say "why should we pay for a telephone?).

I think this analogy breaks down when one tries to
equate the hard work earning a license with the privilege
of using a given set of frequencies. The way I read
the situation, you have to be rich enough to pay off
the government to "rent" you radio bandwidth and then rich
enough to hire law-enforcement types to run off any
interlopers that show up. If you can put up the money,
hard work doesn't matter at all. Conversely, hard work
without cash won't get you anything.

I learned this lesson when the broadcast industry lobby
got the FCC to cancel my hard-earned First 'Phone license.

Good point; I've been having a few chuckles myself of late, having had a 1st phone license back into the 60s (now, of course, a GROL). We've got a radio station (WBBF-AM) here locally that is (or, rather, was) of the 'oldies' format. Now and then it goes off the air for anywhere from 10 seconds (likely switching pattern in the evening) to HOURS! A week ago it was transmitting something that sounded like far-Eastern music. I tried to look them up in the telephone book. Hmmm ... see whatever broadcasting. Hmmm .. WBEE, WBBF-AM, and WBBF-FM are all the same. No listing. Paid the 75 cents for information. They rang the station. And rang. And rang - oops, there goes call forwarding. A voice answered stating that she'd be out of the office (for a WEEK!). Great broadcasting industry we have. I now have a paid up internet radio account. Nice music.

>I learned this lesson when the broadcast industry lobby
>got the FCC to cancel my hard-earned First 'Phone license.

If there be lessons to be learned, then it should be that
requirements and regulations must change to meet the
needs of the present, not the past. There's also a need to
remember that territorial imperative personal feelings aren't
programmed into radio regulations. [a toughie for many
folks] In the 46 years since I got my First Phone and
entered into commercial-industrial radio there have been
enormous changes in both the state-of-the-art and in
regulations. Radio as a communications medium is only
about 108 years old and now has almost no resemblance
to what it was at the previous turn of the century.

Regulations on radio are necessary to avoid the spectrum
disputes, interference, and general quasi-piracy fights over
frequency territory characterized by the first quarter-
century of radio use. [while the first US radio regualtory
agency was created in 1912, it wasn't until after WW1 that
a semblance to frequency allocations of today were

made] We should all obey regulations (they are law after all) of today, but we should all recognize that today isn't always applicable to tomorrow or next year.

When I got my "renewal" of a Commercial Radiotelephone license changed from the blue field with a label of "First Class" to the pale yellow of a "General" (no class), I wasn't happy either. My resentment lasted only a few hours. Times had changed. My "hard work in earning that license" corresponded to an inense week of cramming and memorizing regulations (lacking a Q&A book, I was able to borrow the folders for the entire CFR and used that...not recommended at all today). Test day required a two-hour train ride into Chicago in the morning and the same in the afternoon to return with enough time to see a movie before returning. Lots of anxiety for one day, yes, but not a great deal of "hard work" all in all.

What did I get? A nice looking piece of paper attesting that I had met certain government requirements and passed a government test. It would enable me to lawfully "operate" some radio equipment as codified by government regulations in effect on that exam date. Did a "First Class" signify expertise? No. At the time it signified only that I had passed all the test elements, four of them at that time. It was a formality, a glorified merit badge, signifying that I could go ahead and do the really hard work later and, in that case, earn money while doing it. All the "hard work" came later.

The broadcast industry was required to have licensed operators back then and so were all sorts of civilian radio services. The thing was that all those operators really had to learn their particular equipment (not covered on the test) in some detail and follow the regulations. In actual fact the license wasn't needed at all to actually operate the equipment, do maintenance and tests on the equipment, or follow regulations. One had to have the smarts to learn it and do it satisfactorily to receive the pay check (what I call the real test in life). The license was just a legal formality that basically only got one an interview for a job, nothing more than that. With the advancing states of the art in nearly all radio services and the attendant increase in reliability of equipment, it was beneficial to the industry and government to remove the formalities, the redundancies of paperwork. All radio services were still required to meet technical operating regulations. Frequencies, power output, stability, distortion, etc. requirements had to be maintained and were not somehow automatically okay just because an operator had passed a government

test years past.

Stations have to meet technical regulations of the present and whatever they become in the future. That is necessary for mitigation of interference, the primary task of radio regulating agencies. If an agency has allocated certain frequencies to a particular station (or a band of frequencies to a radio service), then that is their "claim" to use, not whether or not they use it (they must not abuse it as codified in law). There is no territorial "claim" to be made by another station or another radio service as if that were real property. The usefulness of knowledge of use or disuse is only good for proposals to change allocations.

Jim Hampton wants to equate radio and the radio spectrum and radio allocations to real property and carrier services provided by others for a fee. That, in my observation-evaluation, fails. The EM spectrum isn't real property that can remain static over many human lifetimes. Radio has changed considerably in its short 108 year existance. Regulations and the accompanying allocations have to change with changing demands.

I will suggest that the "power wars" began rather earlier, back when
most radios were still hollow-state in the early 1960s.

Approximately 1961, a company called General Radiotelephone
opened a manufacturing facility in Burbank, CA, assembling
their own design in a second-floor loft area. Their major product
was a Class D CB transceiver using a TV sweep tube output
stage. The instruction manual packed with each set stated
that the company expected the CB power output limits to be
raised in the future...so they explained that removal of a simple
jumper wire would increase the power output to meet "future
regulation changes." :-)

About 1963 "General Radio" (familiar name used then which
I never liked) planned to improve their company test antenna
with a new tower-mounted vertical. They had perhaps 15 feet
of it erected when the company dissolved/disappeared/went-
bybye. The present leaser of the loft is a sound recording
company contracting to the local movie/TV industry. The
tower section is still in place and can be seen on Burbank
Boulevard a couple blocks east of Hollywood Way. :-)

The General Radiotelephone design was so-so and reliability
in mobile operation questionable (never had one, knew two
that did), the case color definitely non-esthetic two-tone
brown. Their primary attraction was the ability to increase

power by a simple means (for "future changes") back when
the simple licensing was still required and only 23 channels
allocated yet only a few channels were selectable.

2488. Re: The ARRL in Bloom

...such as "The church of Len" of 27 Jul 02?

...such as "The Church of Len, Schismatic" of 28 Jul 02?

...or the new one, "Len, Lies, and Videotape?"

There's no "maybe" involved, Jon. You have, you did.

>You're persistent, I'll give you that!

Relentless.

>> Okay, then let's see you chastize a fellow amateur extra whose entire
>> newsgroup stock in trade seems to be the belittling others.
>
>I've done so before. It doesn't seem to do much good.

But you are doing so now to a non-amateur. Is that the new way
to interest non-members to become members of the ARRL?

>Is that technique what you learned in your many years of experience in
>computer-modem communications?

Yes. Based on the much older "Do unto others as they have already
done unto you."

>You made defamatory statements. But yes, it's true that you're presented
>only your own opinions -- no facts to back them up.

I've made lots of statements that puncture inflated egos.

I've presented publicly-available facts and resources but the
punctured will not accept them. They cannot accept them.

>What ARRL does is called "providing a service." Your problem with that is
>that you don't want the services ARRL provides to exist because you think
>that anything that helps Amateur Radio flourish somehow diminishes your
>"professional" standing.

An incorrect, scurrilous, baseless lie, Jon. Tsk, tsk, tsk.

My professional standing has already been established. I am retired, I have been published nationally and internationally. I am licensed in civil radio. I have a US patent grant. I accept money for services rendered. No problem.

The ARRL "provides a service" in several ways: It publishes a number of informative periodicals and books which are for sale at a modest profit to the ARRL (about $1.6 million in profit for the year 2000 according to federal tax records). It contacts lawmakers in Washington, DC, to influence laws and regulations according to ARRL policy (a modest $165 thousand in 2000). It offers a number of free services to radio amateurs plus some low-cost benefits to members.

>That's a weird thing for you to believe, but your
>repeated attacks on anyone who practices Amateur Radio, and particularly
>on anyone -- especially ARRL -- who works to make Amateur Radio stronger
>lead to that conclusion.

You are putting your own desires, observations, evaluations as on an equal basis with all of US amateur radio. That's rather impossible since there are over a half million licensed US radio amateurs. If they all thought the same as you then all would be having a "hive mind," a decidedly non-human characteristic. I put your "repeated attacks on anyone who practices amateur radio" into the scurrilous, baseless dumper.

I will readily admit to not being kind, generous, or respectful to those who wish to make US amateur radio into their own image...or to "make it stronger" for their own personal enjoyment. Radio regulations apply to all citizens of the USA.

>More repeated recitation of the same OPINION, always without specifics, in
>the hope that if you throw enough mud, some of it will stick.

Incorrect, scurrilous, baseless lie again. Tsk, tsk, tsk.

>Ah, so subtle that only you and the unidentified and unidentifiable
>teeming masses who agree with you can detect it! The rest of us poor saps
>are under ARRL mind control! ("Whup-whup-whup" go the black helicopters!)

Now it's an arrogant attempt at ridicule. Expected.

>What "competitor" are you referring to? Can you cite any examples where
>ARRL supressed the formation of another national amateur organization? Oh,
>I forgot, citing actual evidence is not in your line!

I've never found that the ARRL "suppressed formation" of another national amateur organization. Several were in existance prior to the formation of the ARRL. All but one did not survive. The only one still existing, the Radio Club of America, founded 1909, now has an interest in all of radio, not just amateur radio.

>ARRL's success comes from having been effective at serving amateurs and
>Amateur Radio. But to you, the people who believe that are just under ARRL
>mind control!

Without any competition to gauge "success" the "been effective at
serving amateurs" statement is merely a claim.

The only possible objective gauge of "success" is that it has
survived since founding as a local club in 1914. The other
gauges read only in subjective quanta.

>I see, it's a sin (albeit not dishonest) for ARRL's official histories to
>document the history of ARRL rather than of other organizations! Tell me,
>Len, when you took US history in high school, did you complain that the
>course didn't discuss the history of Australia, too?

A "sin of omission" is a nice tool in the toolbox of influence
peddlers and sales people. Emphasize the good deeds and
simply don't mention the bad ones, the mistakes, the
competition, or anything else negative. Very SOP. It works
by virtue of its emotional loading, brevity. In the case of
specialized histories over a long period, it give the indication
to readers of the "whole history record" without the reader
having to research the subject (lengthy effort) themselves.

I took US History in college, Jon, and my wife has a Masters
Degree in Education (U of I) with a specialty in US History.
To your non-question question I say "g'day mite."

>Untrue. ARRL publishes a Web site that has thousands of informative
>documents available without cost (along with some that require
>membership). Shipping is free, too! :-) Or don't you consider the Web a
>publishing medium?

The number you quote would be more accurate if changed to
"hundreds," not thousands.

Anyone with Internet access can, at the same time, find tens of
thousands of documents on amateur radio related subjects
available totally free without membership of any kind.

That includes such diverse document types ranging from nearly
all Heathkit radio schematics to copies of the 1994 through 2000
federal income tax forms of the ARRL.

>So, it makes sense to urge people to use the "quite a bit" of information
>provided, does it not?

They can also go to the RSGB sites or the specialty sites for
a PSK31 and see the same thing.

>Are you suggesting that ARRL should not provide information on any topic
>that it did not invent? Why?

Do not misdirect with ridicule using "wife beating" questions.

>First you condemn ARRL for publishing information about a mode it didn't
>create, then you follow that up by condemning ARRL for NOT publishing
>information on military use of a mode! Looks to me like your just in the
>condemning-ARRL business, not applying any consistent concept of what ARRL
>ought to be doing.

Do you feel you must always have input on "concepts of what ARRL
ought to be doing?" Doesn't ARRL have "unpaid" Directors and
section managers and staff, not to mention an ex-salesman
president and an executive-president-for-life to advise on that?

Jonathan Bloom is reported to have earned a year 2000 salary from
the ARRL in the amount of $70,364 plus expense account
allowance of $5,672 plus general benefits of $657. That's a grand
total of $76,693 received from ARRL.

How do you have the temerity to ask for guidance and advice
from retired persons or anyone not employed by ARRL with a
$75K+ salary?

>Apparently the FCC thinks so since they licensed the experimental
>operation. Have you shared your outrage with the FCC?

It would seem the FCC simply got talked into it since HF radio
propagation was pioneered many decades ago. This could
also be a sop to a membership group for purely political
reasons without regard to any technical requirements. With
this experimental grant the selected operators could play at
pioneering the airwaves for real instead of reading about it
happening at a time before most of them were born. :-)

>And, when the fruits of those were pointed out to you, you immediately
>ducked that issue as well.

What "fruits?" Dried-out apples? Totally-black dehydrated
bananas? Anyone would duck garbage thrown at them...

>Yes, Len, you have mentoned a lot of subjects. You keep dredging up the
>same tired, inconsistent, often incoherent, charges against ARRL. Yawn,
>indeed.

Ridicule, belittlement again. Perhaps that comes with the $75K+
salary as a professional amateur.

>What really bugs you about ARRL is not is supposed ineffectiveness. No,
>it's the fact that ARRL is effective, helping to keep Amateur Radio strong
>and vital.

No, that "fact" is simply a claim. It's not substantiable as a
fact except that the ARRL is effective only in maintaining the
ARRL. "Keeping [ARS] strong and vital" is emotionally-loaded
visceral phrasing that works well with a hobby group composed
mainly of white males.

ARRL is just a membership organization whose members are
engaged in a hobby involving radio. It needs more members
and income to keep going (only $11.6 million total revenue
reported in 2000 with a $3.9 million payroll for staff). It has no
competition in other national amateur radio organizations yet
still has a membership less than a quarter of all licensed US
radio amateurs.

>I draw
>that conclusion from your attacks on the presence and practice of Amateur
>Radio and amateurs, from your attempt to get the FCC to impose an age
>limit so that young people can be kept out of Amateur Radio, and from your
>repeated attacks on the organization that is most effective in ensuring
>the continued existence of Amateur Radio. That's my OPINION, Len.

Amazing. One individual citizen made a comment to his
government 3 1/2 years ago and suddenly there is this
dastardly ATTEMPT to IMPOSE! :-) Oh, my, everyone
take up arms to fight the infidel, the heretic, man the
barricades! Negative criticism must be suppressed,
stopped or ridiculed, belittled, made the target of
scurrilous, baseless lies! Can't have that, can you? :-)

Gosh, for a manager type making $75K+ a year at the
ARRL who still needs guidance in what they should do,
that must really be a serious thing!

...somehow I think it isn't conducive to getting new ARRL
members or even encouraging anyone to get a ham license.
But that's my (heretical) opinion as a skeptic, of course. :-)

>I've been honest about my descriptions of US Army communications in the
>1952-1960 period. Others have said that I "lied."

Incorrect. No one has said you "lied" about having served in the United States Army.

What we HAVE said is that you have tried to embellish your "war record" by associating yourself with soldiers that wee KIA two to three years before you were in-theater.

AND...we have demanded to know what your rear-area clerk job in an Army radio facility has to do with ANY aspect of Amateur Radio.

>Irrelevant. I've stated that I served in the US Army. Do you know the
>difference between the two?

Do you?

>You are unable to cite any sources other than amateur radio
>publications. You have been given information sources for the rest
>of the radio world in here, yet there is no sign you have accessed
>any of them.

Irelevant. This is a newsgroup for AMATEUR RADIO.

>Find your reference to the "knew that already" statement...let's compare.

I am sure whatever information you "know", Lennie, "mirrors" what you read off the website in order to "know" it.

>>INCORRECT. Pure wishful speculation on your part, driven by your ignorance
>>and anti-ARRL/anti-Morse code bias, bigotry and prejudice.
>
>NOT "incorrect." I stated an opinion based on observation and evaluation.
>I watched it happen, talked with all sides on that (pro, con, and
>indifferent).

What "sides"...??? Who? When? Where? What radio clubs do you belong to? What Amateur Radio activities have you participated in in the last 5, 10, or 15 years? What Amateur Radio related programs to you belong to?

>I could say, with equal "correctness" that your "corrective comment" is based
>solely on your pro-morse-code bigotry, extreme bias, and having a hissy fit.

>That would be unethical, so I won't say it.

But the basis for HIS opinions comes from PRACTICAL EXPERIENCE in the Amateur Radio service. He IS a licensee...He HAS "been there, done that"....

On the otherhand , YOUR opinion is based on nothing more than what you've read from magazines and personal grievences due to your own unwillingess to "get with the program".

If you could at least show us where you were an ACTIVE member of some radio club...participated in Field Day, etc etc, you would have SOME practical frame of reference.

You don't even have that.

>>Do you think the public service contributions of amateur radio are not
>>important?
>
>Not in the overall picture of "public service" communications involving
>public safety, search and rescue.

Then I guess all those accolades from FEMA, ARC, DoS, DoD, etc really eat at you, don't they?

>>INCORRECT. While the immediacy of email and websites did not exist then, all
>>this did was to lengthen the time span required. The percentage of
>interested
>>parties commenting was actually greater back then than for 98-143.
>
>I haven't seen any numbers in those claims.
>
>Personal computers did not exist in the 1960s.

Which only leads me to reinforce my own belief that any/all of your "work" here is nothing more than that gleaned from websites...NO experience...Just passive recitation of others works.

>>FCC got many proposals from the amateur radio community. Some came from
>>individuals, some from other amateur radio groups. At least ten (10) of
>these
>>proposals were taken seriously enough by the FCC to earn RM numbers (RM-378,
>>455, 470, 474, 480, 481, 516, 517, 538, 577). It was from these proposals
>>that the idea of subbands-by-license-class and other details came about.
>
>Where are these documents to be found? Do we all have to go to the Reading
>Room at the FCC to find the official documents? Are they available on other
>government web sites?

Geeeeze, Lennie...

>Where may we confirm this with the US government?

YOU need to ask?

>>And there was no talk of an age requirement for any amateur license.
>
>How many six-year-old licensees were there in the 1960s?

How many of them were cited by the FCC for operating errors?

>When am I to be burned at the stake?

Today wouldn't be too soon. I got a match.....

AOL is my "internet account?" Then why am I sending $19.95/month
to magpage.com? (Kim is obviously blissfully unaware that you can
be on AOL without using it for your Internet access.)

>behind his store-bought computer,

That's right -- as opposed to the computer that Kim made out of
pure, raw silicon, some bulk chemicals, a few pounds of copper and
other metals, her own chip manufacturing plant, etc. I'm way too
technically disinclined to do all that. Heck, I even had to buy a nice
new flat-panel monitor -- I just couldn't quite homebrew one out of
my ham radio junkbox!

>in his apartment,

Right. My apartment. I live in an apartment, Robert. This is a crime
in all states except Delaware. Kim's tired of lookng at my picture
every time she goes to the Post Office and passes that clibboard full
of the faces of all Delaware apartment dwellers wanted by the FBI
for subversive apartment living.

>after a day's work driving a bus around

That's right, Robert. I work driving a bus around -- all around the entire
county, transporting elderly, disabled, "special" people who wouldn't
have a life without door-to-door Paratransit service. This is what I do
for a living, but it is a crime in Kim's World.

>and little or no CW work at all on his
>manufactured ham radio

My ham radio gear is manufactured, Robert. Guilty. Call the
non-homebrewer's police -- again!

>through his manufactured antenna;

I have a manufactured antenna, Kim? Cool! Which one? I never knew
this, all this time I've been using this 20 - 10 meter dipole I made out
of 35 cents worth of junk wire! (Over 1,000 CW/digital QSO's on it, and

counting!)

>then gets his rocks
>off by pretending he's anything but equal to the rest of us.

Right. I'm not equal to the rest of you. We're all different, but Kim doesn't grasp *that* concept, either.

>I'd say for attitude alone most of us are far superior hams (and humans) to
>the likes of Larry Roll.

You see, my "attitude" is that ham radio licensing requirements didn't have to be dumbed down, particularly the code tests, so Kim, in her murderous resentment of my having an opinion that she disagrees with, makes her silly digs at me. Isn't she charming?

>I'm pretty sure most people know hypocrisy when
>they see it.

Yes, Kim, unfortunately for you.

>Most people can even pick representative forms of hypocrisy ;)

Yes, Kim, unfortunately for you!

In our area, we have maybe 6 stations. There are many times that 3 of them are playing the exact same thing. I think deregulation is going to kill the industry now that it has killed competition.

Sorry if I wasn't clear, Bill.

R-1051 was definitely a much newer design than R-390 or R-390A. Much smaller,
lighter, much less power consumption and simpler to use. Retained the modular
construction but had less mechanical complexity. There was even a transceiver
version.

My comment addressed the fact that some of the performance specs of the R-1051
were quite below those of the R-390 and R-390A (various dynamic range figures,
for example).

Would be interesting to find out when the various military branches stopped requiring it of all radioman ratings.

Do you have any evidence that the licensing of young people has caused any problems in the ARS?

>What you re-started was
>a minor flame war over AGE originally ignited by Hans Brakob a few
>years ago.

Are you the judge of what is acceptable and unacceptable discussion in this unmoderated ng? Age limits for a ham license are definitely a policy issue.

You keep saying you want "discussion of the issues" but when someone brings up a valid issue, you have a hissy fit and get all upset because someone disagrees with your Words Of Wisdom.

>My reason for an age limit was given back in 1999 as
>the case of two six-year-olds who passed amateur radio tests.

Ah - so you agree that those two hams did, indeed, pass their tests. Good.

What is the problem, then? How does the fact that two six-year-olds passed the FCC ham license exams justify an age limit of 14 years? (that's what you wanted the FCC to enact).

Do you have any evidence that the licensing of young people has caused any problems in the ARS?

>>>Under 97.1, Title 47 CFR, you will find political statements that relate to

>I'm not "demanding" a thing, old-timer.

Sure you are, not-yet-a-newcomer.

>I made a SUGGESTION, a COMMENT back in 1999 and let it sit on public view
>along with other commentors on 98-143.

Comments closed almost a month before you sent your reply comments in. They
"were on public view" only after being scanned into the ECFS.

And when someone did bother to take issue with your reply comments, you got all
petulant and nasty about your "rights" being violated. Poor baby.

>>Your demands were in reply comments to the FCC, buried at the end of a long
>>document and timed so that others would not be able to comment on them
>>within the FCC deadline.
>
>On the contrary. I didn't "time" anything except to TRY to get it done in
>time while occupied by a great number of other, more-important personal tasks.

HAW - that's a GOOD one!

FCC gave a longer-than-usual comment period, during which you authored many
many posts here. No time for comments? That's a real knee-slapper!
>
>Nothing was "buried," everything was out in the open.

At the end of over a dozen pages.

>I submitted the requisite
>number of copies plus a disk with text in an acceptible word processing
>format.

Most people just emailed their comments. New technology and all that. Lots of
us hams submitted that way.

>Everything that I submitted is all accounted for in the FCC's own
>acknowledgement in the public record. It was all sent via USPS registered
>with receipt of delivery returned before the deadline.

Right before the REPLY COMMENTS deadline. FCC classified your submittal as
reply comments.

Reply comments are supposed to be rebuttals of what others have submitted. Most
of what you wrote was reply comments to Mr. Deignan's comments. The
age-requirement demand was at the end of your reply comments, and was not a
reply to anything by anyone. Tsk, tsk, bad form, very bad. Someone who has been
IN RADIO FOR 50 YEARS should know that.....;-)

Proper procedure is to bring up new subjects (like age limits) during the
comment period, not as part of reply comments. FCC procedure makes this quite
clear.
>
>>Why should anyone find you credible when you cannot supply as single reason
>>to enact age limit requirements?
>
>The reason was supplied to the FCC 3 1/2 years ago and remains on public

>view.

I could find no reason in your reply comments to the FCC.

>A picture of two of the reasons is still visible on the ARRL website.

How is the licensing of six-year-olds a problem? Do you have any evidence that the licensing of young people has caused any problems in the ARS?

Some of this takes a theologian to understand but I believe it is like this: When you pass Element 2 you will get a Tech license that - with either of the Novices you have - gives you the Plus privleges. In addition your Novice is proof of the code test forever.

Were you to take the code test today, the Cert would give you Plus privleges forever but could only be used for 365 days toward the General/Extra. So you luck out with the old ticket. See what I mean about needing a theologian?

As of 15 April 2000, no new Novices are issued, but you can renew it as you did.

Might I suggest the following:

1. Clear all of this with the VEs you are testing with. They are closer to the font on this one.
2. Fire up and study for the General. One source of good sample exams is http://www.qrz.com and the whole bloody question pool is at http://www.arrl.org. Costs no more to go first class.

Erik,

Your current license document(s) that show you as holding a Novice class
license are proof of Element 1 credit. Bring them to the VE session.

I suggest that you try Element 3 while you are at the VE session for Element 2.
It's not much harder than Element 2. And if you pass, try Element 4.

You get one try at each test element for a single VE fee, provided you take and
pass them in order (they won't let you try Element 3 until you pass Element 2,
etc.)

73 es Good Luck!

Heck, ya don't even need a screwdriver if the cube is turned the right way.

The engineering solution is to find the solution book and learn the solution
techniques. With a little practice it becomes easy to solve.

How is any of that "making fun of your name?" I used your name AS your
name. Contrast that to the way you've used my last name in some of the
thread titles, such as this one.

>>> Okay, then let's see you chastize a fellow amateur extra whose entire

That's a disgusting philosophy you've got there.

> I've presented publicly-available facts and resources but the punctured
> will not accept them. They cannot accept them.

You've posted no "publicly-available facts" at all! All you've posted is
your opinions of what motivates people with whom you disagree. Those
aren't facts, by any stretch of the imagination.

>>What ARRL does is called "providing a service." Your problem with that

> An incorrect, scurrilous, baseless lie, Jon. Tsk, tsk, tsk.

No, a simple conclusion based on your continued attacks on amateurs and
Amateur Radio.

> My professional standing has already been established. I am retired, I
> have been published nationally and internationally. I am licensed in
> civil radio. I have a US patent grant. I accept money for services
> rendered. No problem.

Your professional experience has nothing to do with Amateur Radio, yet you
continue to trot it out to to try to cow others in discussions of amateur
topics. It's perfectly clear that you find amateur accomplishments
threatening to your self-image.

> I will readily admit to not being kind, generous, or respectful to those
> who wish to make US amateur radio into their own image...or to "make it
> stronger" for their own personal enjoyment. Radio regulations apply to
> all citizens of the USA.

From my observations, you aren't "kind, generous, or respectful" to anyone
who disagrees with you in any particular.

>>Ah, so subtle that only you and the unidentified and unidentifiable

Don't say ridiculous things if you don't want to look ridiculous. Are you
planning to defend your claim that ARRL engages in "subtle manipulation of
minds," or just leave it lying there, looking asinine?

>>What "competitor" are you referring to? Can you cite any examples where

Then what did you mean when you accused ARRL and its members of trying to "eliminate the usurper" competitors to ARRL?

>>ARRL's success comes from having been effective at serving amateurs and
>>Amateur Radio. But to you, the people who believe that are just under
>>ARRL mind control!
>
> Without any competition to gauge "success" the "been effective at
> serving amateurs" statement is merely a claim.

But, Len, you just pointed out that ARRL DID have competition.

> The only possible objective gauge of "success" is that it has survived
> since founding as a local club in 1914. The other gauges read only in
> subjective quanta.

No, the measure of success is that AMATEUR RADIO has survived and prospered. That is, after all, the goal of ARRL. That it has been achieved so far is demonstrative of ARRL's success. ARRL has played a significant role in that success, despite your unwillingless to admit it.

>>I see, it's a sin (albeit not dishonest) for ARRL's official histories

> SOP. It works by virtue of its emotional loading, brevity. In the case
> of specialized histories over a long period, it give the indication to
> readers of the "whole history record" without the reader having to
> research the subject (lengthy effort) themselves.

Any reader who thinks that a specialized history is all-encompassing is mistaken. Your assertion that such a history is intended to give readers the idea that it's the "whole history record" is perverse and foolish. ARRL's publications about its own history are just that, and it's only your prejudice against ARRL that leads you to see them as anything else.

> I took US History in college, Jon, and my wife has a Masters Degree in
> Education (U of I) with a specialty in US History. To your non-question
> question I say "g'day mite."

Ask your wife if she considers it a sin of omission that, for example, the memoirs of U. S. Grant don't include a full exploration of the political issues of the Civil War. What trickery!

>>Untrue. ARRL publishes a Web site that has thousands of informative
>>documents available without cost (along with some that require
>>membership). Shipping is free, too! :-) Or don't you consider the Web a
>>publishing medium?
>
> The number you quote would be more accurate if changed to "hundreds,"

> not thousands.

Incorrect. A few moments with a search engine will produce thousands of documents from ARRL's Web site. For example: http://www.google.com/search?q=radio+site%3Awww.arrl.org

> Anyone with Internet access can, at the same time, find tens of
> thousands of documents on amateur radio related subjects available
> totally free without membership of any kind.

So? The claim you were trying to advance, poorly, was that ARRL doesn't provide information except for sale. That claim stands disproven.

> They can also go to the RSGB sites or the specialty sites for a PSK31
> and see the same thing.

So what?

>>Are you suggesting that ARRL should not provide information on any topic
>>that it did not invent? Why?
>
> Do not misdirect with ridicule using "wife beating" questions.

You complained that ARRL published information on PSK31, noting that ARRL didn't originate PSK31 (which nobody has ever claimed it did). What WAS your point?

>>First you condemn ARRL for publishing information about a mode it didn't
>>create, then you follow that up by condemning ARRL for NOT publishing
>>information on military use of a mode! Looks to me like your just in the
>>condemning-ARRL business, not applying any consistent concept of what
>>ARRL ought to be doing.
>
> Do you feel you must always have input on "concepts of what ARRL ought
> to be doing?" Doesn't ARRL have "unpaid" Directors and section managers
> and staff, not to mention an ex-salesman president and an
> executive-president-for-life to advise on that?

You offered the input without solicitation, apparently in the expectation that nobody would point out the contradictions and fundamental emptiness of your opinions. Your expectations were unrealized. The contradicatory nature of your bloviations against ARRL stand exposed.

> How do you have the temerity to ask for guidance and advice from retired
> persons or anyone not employed by ARRL with a $75K+ salary?

Our members (many of whom are retired) provide guidance regularly. They seem to appreciate the opportunity to do so.

You've placed yourself in the odd position of complaining on the one hand that in your OPINION the ARRL leadership runs things only to satify their personal desires, and on the other hand complaining that ARRL solicits input from others! With 180-degree-out inconsistencies like that in your diatribes, is it any wonder that I think your criticisms are based solely

of prejudice and hate-mongering?

>>Apparently the FCC thinks so since they licensed the experimental
>>operation. Have you shared your outrage with the FCC?
>
> It would seem the FCC simply got talked into it since HF radio

> :-)

In other words, no, you haven't complained to the FCC. You're just
throwing more mud, hoping some of it will stick.

>>Yes, Len, you have mentoned a lot of subjects. You keep dredging up the
>>same tired, inconsistent, often incoherent, charges against ARRL. Yawn,
>>indeed.
>
> Ridicule, belittlement again. Perhaps that comes with the $75K+ salary
> as a professional amateur.

Your baseless charges are self-belittling. You have yet to present a
single reference to any verifiable instance of dishonesty on ARRL's part
while repeatedly giving it as your OPINION that ARRL is dishonest. Having
utterly failed to support the charge, your response now is to spew forth
yet again your equally unsupportable mix of complaints that ARRL is too
effective (and yet not effective), publishing information (yet not
publishing information) and is run only for the insiders (yet soliciting
guidance from members). These apparent inconsistencies only resolve
themselves once one realizes that your entire purpose is to attack the ARRL
and Amateur Radio.

>>What really bugs you about ARRL is not is supposed ineffectiveness. No,
>>it's the fact that ARRL is effective, helping to keep Amateur Radio
>>strong and vital.
>
> No, that "fact" is simply a claim. It's not substantiable as a fact

> But, Len, you just pointed out that ARRL DID have competition.

Additionally, this being a free market economy, if the ARRL did NOT
successfully meet the needs of enough of its membership then
other organizations would have likly sprung up...or the ARRL would simply
have died anyway. Bottom line...while some will disagree with
certain specifics, most hams who are ARRL members see
their membership as beneficial and the ARRL as meeting enough
of their needs to retain their memberships.

One area that recently garnered sufficient "disagreement" with
ARRL was on the morse issue. As a result, several people (including
myself) created No Code International to counter the position
of ARRL as well as all other amateurs that want to retain code
testing. The ARRL made NO effort to stop NCI from forming...
either overtly or covertly to our knowledge.

No he's not. The results of ARRL's efforts are documented fact. Sorry you
don't agree.

>I put your "repeated attacks
>on anyone who practices amateur radio" into the scurrilous, baseless
>dumper.

You may, but it's still correct...AND archived in USENET.

>I will readily admit to not being kind, generous, or respectful to those
>who wish to make US amateur radio into their own image...or to
>"make it stronger" for their own personal enjoyment.

Anyone who enjoys Amateur Radio WANTS to make it stronger for thier
enjoyment! How could they enjoy it if it were less that what it is or
undermined altogether?

Sheesh...PUTZ!

>>More repeated recitation of the same OPINION, always without specifics, in
>>the hope that if you throw enough mud, some of it will stick.
>
>Incorrect, scurrilous, baseless lie again. Tsk, tsk, tsk.

If it's a(n) "Incorrect, scurrilous, baseless lie..", PROVIDE THE EVIDENCE
OF DISHONESTY, LENNIE!

Failure to do so is only further evidence ofyour own deceit and
dishonesty.

>Without any competition to gauge "success" the "been effective at
>serving amateurs" statement is merely a claim.

In as much as Amateur Radio still exists after numerous attempts by the
Armed Forces and commercial concerns to see it done away with, the "evidence"
is, well, evident!

The efforts of the ARRL to maintain the Amateur Radio service throughout
wars and capitalistic adventures has been monumental. I don't know of any other
organization that has so adamantly defended it's cause in the face of such odds
with such effectiveness.

>The only possible objective gauge of "success" is that it has
>survived since founding as a local club in 1914. The other
>gauges read only in subjective quanta.

There's nothing "subjective" about the facts.

>I took US History in college, Jon, and my wife has a Masters
>Degree in Education (U of I) with a specialty in US History.
>To your non-question question I say "g'day mite."

You should seek a refund and who cares what your wife did? It's obviously
not doing YOU any good.

>Do not misdirect with ridicule using "wife beating" questions.

You still haven't answered mine...

>How do you have the temerity to ask for guidance and advice
>from retired persons or anyone not employed by ARRL with a
>$75K+ salary?

Who needs "temerity"...??? I have far greater respect for ANY man or woman
that seeks guidance from whatever source, rather than try and foist one's self
off as "all-knowing"...Kinda like YOU, Your Ivory Pedestalness.....

One's salary ahs nothing to do with it.

You brag about how much money you have and your material possessions, yet
none of that seems to indicate that you have any common sense nor appreciation
for certain knowledge, facts or experience.

You got lotsa toys that make lotsa noise, but not much else.

>>Apparently the FCC thinks so since they licensed the experimental
>>operation. Have you shared your outrage with the FCC?
>
>It would seem the FCC simply got talked into it since HF radio
>propagation was pioneered many decades ago.

This is cute. The same Lennie that is adamant about how "independent" the
FCC is from ARRL or Amateur Radio personalities now asserting that the FCC "got

talked into" something by those same entities.

Sheeesh....

>This could
>also be a sop to a membership group for purely political
>reasons without regard to any technical requirements. With
>this experimental grant the selected operators could play at
>pioneering the airwaves for real instead of reading about it
>happening at a time before most of them were born.

Or, just like it was said before, it was an effort to determine whether or not Amateur type operations could be conducted with other non-Amateur users of the band.

And the "evidence" of the "experiment" was sufficient to sway FCC staffers to go ahead and allow an NPRM on the creation of the "new" band...???

Hmmm....A group of concerned citizens seeks a change to FCC rules, does the "homework", presents thier findings, and then the FCC finds sufficient reason to at least ask the public what THIER opinion is.......

So far the ONLY problem I see in the whole process is that LENNIE wasn't a part of it, and now needs to FIND a reason to discredit the entire process.

So far, he's FAILED.

>>What really bugs you about ARRL is not is supposed ineffectiveness. No,
>>it's the fact that ARRL is effective, helping to keep Amateur Radio strong
>>and vital.
>
>No, that "fact" is simply a claim. It's not substantiable as a
>fact except that the ARRL is effective only in maintaining the
>ARRL. "Keeping [ARS] strong and vital" is emotionally-loaded
>visceral phrasing that works well with a hobby group composed
>mainly of white males.

Ahhhhh...the race card again. No eal argument...Only his own "emotionally charged" rhetoric.

Facts don't support it, but hey, it keeps him warm at night.

Spin, Lennie, spin...It's the only thing keeping you vertical, I am sure.

Methinks you are correct. WOKR TV here in Rochester gets its' feed from Syracuse. That station feeds a couple of other stations owned by the same group. The net result is that most of the employees were let go. They have a transmitter guy and staff for the local news. Other than that, it is all remote control. (I worked there for six months in early 72. I left them for Kodak.)

73 from Rochester, NY

Well "JJ" it actually is a 'big deal' to get DXCC on all those bands. Do you have any concept of the time and dedication that took? How much knowledge of radio propagation and skill in operating it took to work those stations. Not to mention the monumental task of actually getting them confirmed?

In otherwords "JJ" it IS A BIG DEAL.

No. You used my given name IN CONNECTION with religion or
directly associated with "lies." Tsk, tsk.

The word "bloom" is much more associated with flowers and plants.
ARRL has been portrayed as the "flower of US ham-dom." :-)

>What does interesting nonmembers in ARRL have to do with your behavior
>toward Jim? More misdirection!

I'm not communicating with any "Jim" here. Quit misdirecting.

>> Yes. Based on the much older "Do unto others as they have already done
>> unto you."
>
>That's a disgusting philosophy you've got there.

In other venues it is called "self defense." It can be called
"disgusting" when you've been caught at it, thought you were
victorious, and wound up the victim, losing points. You were

and you did. Tsk, tsk.

>You've posted no "publicly-available facts" at all! All you've posted is
>your opinions of what motivates people with whom you disagree. Those
>aren't facts, by any stretch of the imagination.

Scurrilous, baseless charges. I've posted opinions. I've posted facts.
That you cannot distinguish between them is your problem, not mine.

>No, a simple conclusion based on your continued attacks on amateurs and
>Amateur Radio.

I am against individuals and some parts of a national membership
organization. You do not represent all US radio amateurs nor
does ARRL represent all US radio amateurs.

Please stop those scurrilous, baseless charges.

>Your professional experience has nothing to do with Amateur Radio, yet you
>continue to trot it out to to try to cow others in discussions of amateur
>topics. It's perfectly clear that you find amateur accomplishments
>threatening to your self-image.

How can a single individual "cow" over a half-million others? :-)

You are a professional amateur. You accept money working for an
amateur radio membership organization. You are the one with the
sacred cow. I'm guilty of nothing but being a cow puncher. :-)

>From my observations, you aren't "kind, generous, or respectful" to anyone
>who disagrees with you in any particular.

Not a problem here. :-)

Jon, maybe the Internet arena is too much for you. Or maybe you
think your employment and titles with ARRL automatically demand
some servile respect? Tsk, tsk, you've been patronizing...

>Don't say ridiculous things if you don't want to look ridiculous. Are you
>planning to defend your claim that ARRL engages in "subtle manipulation of
>minds," or just leave it lying there, looking asinine?

I already explained in a post on Bill Sohl's comment.

If you want to remain the arrogant patron, you are welcome to all
the outrage you can muster. Readers can judge for themselves as
to who is "ridiculous" and who isn't. :-)

>Then what did you mean when you accused ARRL and its members of trying to
>"eliminate the usurper" competitors to ARRL?

See my response to Bill Sohl's comment.

>No, the measure of success is that AMATEUR RADIO has survived and
>prospered. That is, after all, the goal of ARRL. That it has been achieved
>so far is demonstrative of ARRL's success. ARRL has played a significant

>role in that success, despite your unwillingless to admit it.

Please try to be original in here. Recycling old paragraphs is not
eco-friendly. :-)

US amateur radio survived, yes. It is now considered stagnant in
number of licensees over a two-decade period. See the amateur
radio newsline.

I claim that ARRL's influence in DC has made US amateur radio as
what ARRL wishes, in the image they present.

>Any reader who thinks that a specialized history is all-encompassing is
>mistaken. Your assertion that such a history is intended to give readers
>the idea that it's the "whole history record" is perverse and foolish.

...then you've just defined skepticism as "perverse and foolish."

Each and every history published anywhere reflects its
publisher. If the ARRL wishes to conveniently forget all others
that influenced amateur radio in earlier days, then it can go
ahead and write it any way it wants. If you want to say that it
is perfectly correct, honest then fine...I'll say you are the one
that is "perverse and foolish." :-)

>Ask your wife if she considers it a sin of omission that, for example, the
>memoirs of U. S. Grant don't include a full exploration of the political
>issues of the Civil War. What trickery!

Radio didn't exist in the American Civil War. Why do you mention
the above?

>So? The claim you were trying to advance, poorly, was that ARRL doesn't
>provide information except for sale. That claim stands disproven.

I didn't claim anything of the sort.

>You complained that ARRL published information on PSK31, noting that ARRL
>didn't originate PSK31 (which nobody has ever claimed it did). What WAS
>your point?

I "complained?" :-)

I made a point. The fact that you don't accept anything negative
seems to be your only counter-point.

>You offered the input without solicitation, apparently in the expectation
>that nobody would point out the contradictions and fundamental emptiness
>of your opinions. Your expectations were unrealized. The contradicatory
>nature of your bloviations against ARRL stand exposed.

"Bloviations?" :-)

I just offer "input" here. I don't "expect" anything but am often
surprised as to the responses!

So far, you've offered almost nothing but re-hash of old ARRL
claims of inherent wonderfulness and anything whatsoever
negative about ARRL is "scurrilous, baseless, perverse, empty."
From that I can only conclude that you are in disagreement?
:-)

>Our members (many of whom are retired) provide guidance regularly. They
>seem to appreciate the opportunity to do so.

That's wonderful. Does ARRL act on such guidance or do they
just pat them on the head, say thank you, and continue anyway?

>You've placed yourself in the odd position of complaining on the one hand
>that in your OPINION the ARRL leadership runs things only to satify their
>personal desires, and on the other hand complaining that ARRL solicits
>input from others! With 180-degree-out inconsistencies like that in your
>diatribes, is it any wonder that I think your criticisms are based solely
>of prejudice and hate-mongering?

Okay, now I add "diatribes, prejudice, and hate-mongering!"

Getting to be a long list. :-)

Maybe ARRL can publish a new title ridiculing all skeptics in those
terms?

>In other words, no, you haven't complained to the FCC. You're just
>throwing more mud, hoping some of it will stick.

:-)

>Your baseless charges are self-belittling. You have yet to present a
>single reference to any verifiable instance of dishonesty on ARRL's part
>while repeatedly giving it as your OPINION that ARRL is dishonest. Having
>utterly failed to support the charge, your response now is to spew forth
>yet again your equally unsupportable mix of complaints that ARRL is too
>effective (and yet not effective), publishing information (yet not
>publishing information) and is run only for the insiders (yet soliciting
>guidance from members). These apparent inconsistencies only resolve
>themselves once one realizes that your entire purpose is to attack the ARRL
>and Amateur Radio.

Thank you for pointing out the error of my ways, Big Brother.

>Yep. You tried to convince the FCC to use the power of the government to
>proscribe youth participation in Amateur Radio.

Is everyone over 13 an adult? :-)

Did you complain to the FCC about my comment? :-)

>> ...somehow I think it isn't conducive to getting new ARRL members or
>> even encouraging anyone to get a ham license. But that's my (heretical)
>> opinion as a skeptic, of course. :-)
>
>That's also your goal, in my OPINION.

<roll up the anthem and heavenly chorus voice-over>

Announcer: Thank you for listening. This has been another public service program from the one, the only voice of amateur radio, the A-R-R-L, the one true faith for all hams everywhere. We were happy to bring you another reasoned discourse on how we were so wonderful, so honest, so everything good for amateur radio all the time. Goodbye until tomorrow when we will be back with another unbiased professional amateur showing how non-members are such dirty rotten scoundrels.

I did not answer that directly since it is a loaded question. Jon could
have asked me if I still beat my wife and gotten the same non-answer.

There was a competition in pre-WW2 membership organizations
and the ARRL grew from a just-pre-WW1 local club to a national
one by the 1930s. The ARRL effectively marketed itself through
tangible periodicals and publications, very useful to individual
amateurs whose major technical and event information was
obtained through tangible periodicals and publications. That was
the extent of amateur radio mass media information at the time.

>Additionally, this being a free market economy, if the ARRL did NOT
>successfully meet the needs of enough of its membership then
>other organizations would have likly sprung up...or the ARRL would simply
>have died anyway.

Sorry, that's still mostly a claim. It's a multi-level condition with
a lot of assumptions. A fact to remember is that the ARRL was
NOT the first membership organization, not even at a local level.
The Radio Club of America was founded in 1909 and still exists
although it went mainstream in radio a long time ago and did not
concentrate on amateurism. There were other organizations that

existed but most of them eventually dissolved, principally for generally lacking a marketing vehicle, the publications. Few had the resources to employ representatives to the US government to influence one of the four radio regulatory agencies that existed in the pre-WW2 period.

In the whole of the pre-WW2 period, It is convenient fiction to assume that all US radio amateurs were somehow in an easy-to-use communications medium environment where information can be quickly shared by most radio amateurs. The vast majority of information sharing for hams at greater distances than a local state grouping was by printed matter...magazines, newsletters, books. Printed matter is a subtly powerful medium for influence, it being considered "truth" as nearly everyone has been imprinted since public school days. Printed matter is essentially one-way, that is, there cannot be any immediate respondu-cantu with the originators of printed matter. The originators have full control over the content and printed matter retains its content intact until physically damaged.

Printed matter...and later, most mass media sources, are enormously powerful influence-peddling tools. They can shape opinions, even desires. All countries use them, have used them sometimes with disasterous results. I would surmise the ARRL saw this early-on since they have capitalized on it and mildly prospered through it.

So, in the pre-WW2 period and even pre-1950 period, those with printed matter media had an intrinsic positive-feedback, self-reinforcing system for influencing opinions, thoughts. One could not argue with printed matter. It was there and didn't change unless one physically destroyed it. All the copies of a particular printed matter had the same content. Printed matter had the appearance of "authority," something all learned from first school days. We all went to textbooks for truthful information...we all read newspapers to find out what happened elsewhere where we could not be physically present to find out first-hand. Through photographs and drawings in printed matter we could find out about complex things that were difficult to explain in just words. The power of printed matter for communicating information, thoughts, ideas, facts...and even fallacies and myths...is enormous.

>Bottom line...while some will disagree with
>certain specifics, most hams who are ARRL members see
>their membership as beneficial and the ARRL as meeting enough
>of their needs to retain their memberships.

All fraternal organization members who remain fraternal organization members will support their fraternal organization in a positive way. That syndrome is intrinsic to human groupings...the family, the tribe, the school, a sports team,

shared avocations, all have the same characteristic feelings of loyalty, of belonging, the group being "theirs." It is emotional, almost to the level of being visceral. That is not "good" or "bad," it simply IS. It is a very human thing.

ARRL is a fraternal organization that is also engaged in a publishing business. It began as a little local club in New England and has been expanding for decades. They are de facto that most definitely even though some laws define their organization as "non-profit."

ARRL is presently the ONLY national membership organization actively operating as a combination fraternal order, publishing business, and political-action group for radio amateurs. They have no real competition. There exist only special-interest groups such as TAPR and NCI, neither one claiming to represent all of amateur radio.

Charges have been made that I said ARRL has "suppressed" rival groups, ostensibly by forceful means. I didn't and they haven't. They simply outlasted the others. That's quite common in commerce or any other competitive endeavor. The fact that ARRL survived is not a valid claim to their "correctness," "honesty" or anything else but survival.

ARRL has skillfully influenced members into thinking it is always for them. If they keep saying that for decades through amateur radio mass media, that can also be likened to long-term brainwashing...although there will be intense emotional negative reaction from ARRL loyalists. The technique, also known as the "big lie" has been practiced many places, many times, by many organizations. Those who control the mass media have a terribly strong influence over people's thoughts and desires. All advertising marketing efforts are aimed at manipulating thoughts and desires for the advertisers' benefit.

>One area that recently garnered sufficient "disagreement" with
>ARRL was on the morse issue. As a result, several people (including
>myself) created No Code International to counter the position
>of ARRL as well as all other amateurs that want to retain code
>testing. The ARRL made NO effort to stop NCI from forming...
>either overtly or covertly to our knowledge.

ARRL had no need to "stop anyone" nor did it have any control over the much-wider mass media of the Internet and independent amateur radio oriented publications. With the implanted thoughts over years and capitalizing on emotional loyalty to fraternal organizations, ARRL could have thought that the existing membership would simply talk NCI down. Examples of that in this newsgroup are many.

What their detractors don't want to acknowledge is that NCI demonstrated an intense feeling on a specific thing and was able to organize a movement largely through the Internet. ARRL was powerless to stop anyone in such an environment. They did not have any control.

ARRL does have control in its own mass media output...as it has for decades. They keep saying and implying they "lead" radio amateurs in some "proper way" as they have for decades. With no real competitor, their members have extended their loyalty into a form of belief system. They intensely believe in an inherent honesty in all of ARRL statements and question little, if anything. They brook no dissention and will not hesitate to quash all disbelievers. Purely visceral.

>> No, the measure of success is that AMATEUR RADIO has survived and
>> prospered. That is, after all, the goal of ARRL.

That is the stated goal of ARRL. They say so.

The question remains unanswered...exactly who "prospered?" ARRL survived as a national membership organization. There are no others in the USA.

The appearance is that amateur-radio-as-defined-by-ARRL has "survived" and "prospered." When there is only one organization "representing" a minority of a group, there is a great deal of skepticism in that. There is only a belief that ARRL represents the thoughts, goals, ideals because there is no competition, no easy way to prove all that representation and goal-holding.

>> That it has been achieved
>> so far is demonstrative of ARRL's success. ARRL has played a significant
>> role in that success, despite your (Len's) unwillingless to admit it.
>
>Works for me.

I have no doubt whatsoever that ARRL has played a significant role in keeping amateur radio service in the USA...but I state that it is an ARS as ARRL upper levels wishes it to be. There is a considerable difference. ARRL Believers cannot see any difference.

ARRL spokespersons and very loyal members have given no proof that I am incorrect in my skepticism. They have, in visible fact, attempted to suppress skepticism through ridicule, denigration, and charges of some sort of "disloyalty." :-)

Believers are beyond argument. There is no faith but their one true faith. All others are heretics, infidels deserving no mercy. :-)

And the World Class DXer who stoops to working out of band Frenchmen for
what?

Dunno? I can't really say why he would risk his reputation for some
out-of-banders.

Jon, it's just a double standard kind of thing.

Dick and Larry can be nasty to anyone they want because of some perceived
past infraction.

But Len has to play by different rules.

OK, so you spend countless hours in front of a radio making
contacts that amount to nothing more than exchanging calls signs,
signal reports and QSL info to get some certificates to hang on
the wall you can point to to attest to all the hours you spent in
front of the radio. Over the years I have worked over 275
countries, all confirmed, on 15 meter sideband. These were real
QSOs, not just exchange signal reports and run. What good does a
contact like that do? Never did apply for any wallpaper. Like I
say, all that and a few coins will get you a cup of coffee.
Nothing to brag about.

Absolutely. It means the person went to school for a long time.

> At least the time spent earning a medical degree or
> other education skill is time spent learning something that can be
> put to use.

The ARS is a hobby. One that can be put to practical use, but a hobby nonetheless. I have another hobby, amateur astronomy, in which I have collected certificates similar to DXCC for the identification and placement of various objects in the sky. Of what use is that? The objects are already discovered, and I won't be adding to the aggregate knowledge by my finding them myself. So they are useless, no?

Hold on a second! After learning how to find these objects, I can now navigate around in the night sky. I can participate as an amateur astronomer in the search for asteroids, or add to the data on the planets, two fields in which amateurs provide a lot of information. And I had fun at the same time.

Back to the ARS, if a person is honing their skills by working DX, often weak and elusive DX, they are preparing themselves for more "practical" things like emergency communications, and having fun at the same time. Some folk like this sort of thing, and some don't. But to diss DXCC just because you don't like it is disingenuous for sure.

> But to brag about earning DXCC as some accomplishment
> that merits some value other than maybe satisfying one's own ego
> is stretching it a bit. You just don't get it do you.

Ego? DXCC is a game, and it has some practical aspects to it. It can be fun for those who like such things. Games are fun, and really good ones have something beyond just beating an opponent, like training for a useful purpose.

As for getting it, I'll let others decide, but I have noted a reason for DXCC, and why some people might like it, and some not.

Larry, after witnessing your temper tantrums on the subject, I wonder why
they are staying away?

If the ARRL represents one radio amateur, it represents one more than
you represent, Len.

> I'm not communicating with any "Jim" here.

Ah, that's right, you're communicating with "Jimmie Boy" since you are
unwilling to treat others with even a modicum of common courtesy.

>>> Yes. Based on the much older "Do unto others as they have already
>>> done unto you."
>>
>>That's a disgusting philosophy you've got there.

Belittling people and calling them names is self defense? You should write
your own dictionary so we can look up the peculiar definitions you use.

> It can be called
> "disgusting" when you've been caught at it, thought you were victorious,
> and wound up the victim, losing points. You were and you did. Tsk,

Oh? Care to be explicit about what I've "done unto others as they have
already done unto me?" Or is this yet another wild accusation without
merit that you're unable to defend?

>>You've posted no "publicly-available facts" at all! All you've posted is

> That you cannot distinguish between them is your problem, not mine.

Maybe I just need more help, Len. Could you please enumerate the facts
that support your charge of dishonesty against the ARRL so I can see them

more clearly? I can't find a single citation on your part of an ARRL statement that is demonstrably a lie. Maybe if you'll just post the citations succintly I'll see the facts. (Don't bother reposting your opinions; those are perfectly clear to me.)

>>No, a simple conclusion based on your continued attacks on amateurs and

You're guilty of making slanderous statements about the ARRL.

>>From my observations, you aren't "kind, generous, or respectful" to
>>anyone who disagrees with you in any particular.

> "ridiculous" and who isn't. :-)

I'm fine with that. So far the readers have seen you make unfounded charges of dishonesty and a self-contradictory list of criticisms of ARRL for no apparent reason other than personal pique.

>>Then what did you mean when you accused ARRL and its members of trying
>>to "eliminate the usurper" competitors to ARRL?
>
> See my response to Bill Sohl's comment.

Your non-response, you should say. You only called it a loaded question, which is how you characterize any question that attempts to elicit some substance for you claims of unethical behavior of the party of others. You've still failed utterly to show in any manner how ARRL has ever tried to suppress any organization. In short, this is yet another charge that you made up in its entirety.

> I claim that ARRL's influence in DC has made US amateur radio as what
> ARRL wishes, in the image they present.

Yes, Amateur Radio is still going strong thanks to ARRL.

>>Any reader who thinks that a specialized history is all-encompassing is
>>mistaken. Your assertion that such a history is intended to give readers
>>the idea that it's the "whole history record" is perverse and foolish.
>
> ...then you've just defined skepticism as "perverse and foolish."

Not skepticism, just the cynicism you've been spouting.

> Each and every history published anywhere reflects its publisher. If
> the ARRL wishes to conveniently forget all others that influenced
> amateur radio in earlier days, then it can go ahead and write it any way
> it wants. If you want to say that it is perfectly correct, honest then
> fine...I'll say you are the one that is "perverse and foolish." :-)

The extent to which history published by ARRL is correct is a matter for historians to argue. Whether the publication is honest is another matter, and in making the charge that it is not you are ethically obligated to support the charge with something more than OPINION. Yes, I know I'm repeating myself and that you are incapable of or unwilling to behave ethically, but, you see, I'm persistent, too.

>>Ask your wife if she considers it a sin of omission that, for example,
>>the memoirs of U. S. Grant don't include a full exploration of the
>>political issues of the Civil War. What trickery!
>
> Radio didn't exist in the American Civil War. Why do you mention the
> above?

Because you seem to think that a history that is not all-inclusive is an attempt to exercise mind control. I was wondering if that applies only to the ARRL of if you are equally "skeptical" of others. By ducking the

question, you've answered it.

>>So? The claim you were trying to advance, poorly, was that ARRL doesn't
>>provide information except for sale. That claim stands disproven.
>
> I didn't claim anything of the sort.

Incorrect. You said:

> QST is, or should be,
> self-supporting through advertising sales and the true demographics of
> subscribership (entire membership) allow ad sales to function. Not like
> independent publishers unaffiliated with membership organizations.
> Everything else in ARRL publications seems available for a price
> (shipping extra if ordered from Newington).

Note especially the last two lines. Or are you using the word "everything"
in some manner heretofore unknown?

>>You complained that ARRL published information on PSK31, noting that
>>ARRL didn't originate PSK31 (which nobody has ever claimed it did). What
>>WAS your point?
>
> I "complained?" :-)
>
> I made a point. The fact that you don't accept anything negative seems
> to be your only counter-point.

Your answer to "what was the point" is, "I made a point"? If you can't
even figure out what point you were making, how do you expect anyone else
to do so?

But of course, the real point that you continue to try to make is, "ARRL
is wrong, wrong, WRONG!" Too bad you can't back that up with any factual
basis or cogent analysis -- or even a consistent, understandable set of
criticisms!

> "Bloviations?" :-)
>
> I just offer "input" here. I don't "expect" anything but am often
> surprised as to the responses!
>
> So far, you've offered almost nothing but re-hash of old ARRL claims of
> inherent wonderfulness and anything whatsoever negative about ARRL is
> "scurrilous, baseless, perverse, empty." From that I can only conclude
> that you are in disagreement?

You can also conclude that when you make serious charges you'll be asked
to substantiate them and, when you prove unable to do so, will impeach
your credibility and make yourself look foolish.

>>Our members (many of whom are retired) provide guidance regularly. They
>>seem to appreciate the opportunity to do so.

>
> That's wonderful. Does ARRL act on such guidance or do they just pat
> them on the head, say thank you, and continue anyway?

Were it the latter, they wouldn't remain members, yet, by and large, they
do.

>>Yep. You tried to convince the FCC to use the power of the government to
>>proscribe youth participation in Amateur Radio.
>
> Is everyone over 13 an adult? :-)

Did I say "youths of all ages?" No, so you can drop that fruitless attempt
to distract attention from your efforts.

> Did you complain to the FCC about my comment? :-)

No need for that. That you attempted to constrict Amateur Radio growth is
pitiful. If you thought you would actually succeeed, it's laughable.

> Announcer: Thank you for listening. This has been another public

> until tomorrow when we will be back with another unbiased professional
> amateur showing how non-members are such dirty rotten scoundrels.

Same old stentorian tone, same complete lack of meaningful content. And
still nothing on which to base your charge of dishonesty. At least that's
ONE thing you're consistent about, Len.

More like:

"Skyking, Skyking this is Retail, this is Retail--break break--Alfa Sierra Papa November. Authentications Tango Yankee. I say again..."

or

"Tong 57, go ahead with your JOPREP JIFFY ATBAR; over"

It's been nearly 32 years but the words won't go away.

Now you're not telling the truth. Another gem from your "Good Amateur
Practice" handbook?

Yes, you keep saying that. Now how do you conduct yourself on the bands?

You should be nominated for the A-1 Operators award.

> > Please tell us what Part 97 has to say about being or working DX.
>
> I didn't initiate the gabble about Part 97 as it relates to being DX.

You did. You said that Somalia isn't a US posession. The only connection
is that Somalia doesn't fall under Part 97. What else could it mean?

Unless you meant that "General" Aideed doesn't pay US taxes.

> You did. You wrote: "Part 97 doesn't say I cant' be DX or work DX
> until I'm an Extra, does it?"

Well does it?

I don't believe Part 97 says anything
> about being DX or working DX. Part 97 certainly doesn't, as I've
> pointed out several times, have anything to do with amateur radio
> operations from places which are not part of the United States or its
> possessions/territories.

So why your question concerning Somalia? Are you saying that I must confine
my DXing activities to only US posessions?

> If you are in the United States or its
> possessions/territories, Part 97 has everything to do with any and all
> of your amateur radio operation, DXing included.

Yes, I've done that as well. It was a lot of fun.

> > What does
> > it recommend for me to get my SSB rate up? Does it say I should stay >
with the foot switch or should I use VOX?
>

I'll pass on the CW, but do tell about 40M SSB. I'm always interested in
learning more about my favorite hobby.

> > I think Part 97 doesn't say squat about DX, but you're free to interpret
it
> > any way you like.

Dave, you couldn't be more right. Ditto Somalia. So why did you bring it
up?

> > > > As a matter of fact, I don't think the FCC published a DX list. As

15?

Now, on a scale of 1 to 100, with 100 being the world's most brilliant DXer
and me at 1, where do you place yourself?

> > > > > > > > > > > > Are you saying that my DX QSOs aren't any good

I have first hand evidence that it is not a US posession. What was your QSO
rate from Somalia?

> > Why did you bring it up inside that
> > relationship?
>
> It was in response to your comment on what Part 97 says about being DX.
> Tell us how your operation from Somalia related in any way to Part 97.

Wrongo. I brought up Part 97 as in, "Part 97 doesn't apply to Somalia."

Why did you say Somalia is in the list of countries that I've "trotted out"
and is not a US posession?

> > > > > > > > > > > > > > > When I've got a pile-up, I run it.

I work with what I've got. You didn't seem to mind that in getting US
Posession Guam Island confirmed. Maybe it put you over in the IOTA contest
or something.

I'm sure that most top
> DXers also send their requests for needed countires and expect replies

If it confirms a country, what's the difference? Should I cut off my fellow countrymen because they've exceeded the 12.3 second El Supremo DXer QSO length rule?

> > > > Dave, am I the only amateur that you consider not to be a DXer? Please

> Why not ask them?

Why?

If ragchewing at distance is what they do, I'd guess
> their totals are not high. Maybe, as is your idea, they only work 100
> countries in order to qualify for their initial DXCC and then stop.
> Maybe they just work 10m SSB. Maybe they simply spend so much time
> bitching about their lot in amateur radio that they don't have time to
> get on the air much.

Or maybe they just look down their nose on everyone else, poopooh others accomplishments no matter how small, and act like a general shitbyrd just because they've got 300+ confirmed and an A-1 Operators award?

Yep, you've heaped yourself pretty high.

> > > > You can start with the ones who buy new homes in restricted

So now you don't like QRPpers?

One final question; Are there any other hams that you actually like, or do you see them all as competitors that must be destroyed else your status be challenged?

2554. Re: "...one step closer to extinction."

With all the time you'd spend in ensuring that those you were about to
work were operating within their allocated segments, ragchewing with W4s
and making out QSL cards; it really doesn't matter much where you go.

Dave K8MN

Dear Hamm Buddy, knock yourself out. Be sure to cc the folks who are buying out Prodigy. And never, ever send anything directly to my e-mail account ever again. I don't like your kind of pranks. Disagree with me all you want, but keep your comments public and no sick jokes directly to me, please.

In fact, since your post on RRAP requesting that pornography be sent to me, I have received explicit pornography spam. The pictures just come up as part of the message - I don't have to open any attachments or visit a web site. I wonder who would be liable for this distasteful stuff showing up in my mailboX?

You can "reporst" whatever you like, even vehemently disagree. But please keep your comments in English, not Spanish. I could barely figure out your pornography "joke," such as you called it.

JJ, you must not have known at the time that you're not any good at getting
those 275 countries unless you adhered to the 12.3 second QSO rule.

Hey, I'm just as suprised as you are, but all those "ragchew" DX contacts
gotta go.

;^)

>Can you not envision how a person
>can pass the exams and not gain priveleges?

o By passing only portions of the examination for a particular class of license
at one sitting and having the CSCE expire
o By passing the exams and losing the CSCE
o By passing the old Tech exam and not bothering to apply for a new General

I am sure there are a few more combinations of not doing what the regulations
require to get a license that would result in someone having passed the
necessary elements but not gaining privileges.

Life is tough, isn't it?

>then I know where to look for them. And should the French amateurs try to
>contact me out of band on 6M, I wouldn't work them because I would know they
>were out of band

Without looking, how many countries' operating privileges do you know off the
top of your head?

Are you not expecting something of Dave that you do not expect of yourself? In
the pileups your getting on the air must generate, do you really tell stations
to QRX while you check whether they have the privileges to work you on the
frequency you are using? We know that you now know this of French stations,
but just how many countries do you know?

>Message-id: <20020729002724.02933.00000353@mb-bd.aol.com>

>I've already archived the back-ups in here in previous repetitions.

No, Anderson, ALL you have done is archived your repetitive allegations.

Not one shred of "evidence" of ANY misdeed, EXCEPT for your opinions and allegations.

>I call hypocrisy as dishonest. ARRL claims leadership of [US] ham radio
>but their leadership actions seem more to be following what other
>countries have done in nurturing technology or achieving more bandspace.
>Gave that in another message today.

Then you have provided not one shred of "EVIDENCE" of ANY misdeed.

Do you need a copy of Webster's from which to draw a definition of "evidence" from, Lennie?

>Are professionals undesired?

If YOU are the milestone by which we determine, "professional", I certainly hope so!

>No. But, coming from a late president of the ARRL, a suggestion to
>"find out about radio" was in poor taste, borderline civility to an
>already-working radio-electronics professional.

You really do dig hard to find things to be indignant about, don't you, Lennie? You ARE a "professional" victim.

>>I asked for evidence, Len, not more character assasination and baseless
>>charges. Maybe the problem is that you just can't tell the difference?
>
>No. You've just been both patronizing and sarcastic.

No matter how patronizing and saracstic you think he is, he has still asked you a VALID question...What EVIDENCE do you ahve of ARRL dishonesty?

>No problem here.

Wrong. Your problems are abundant and apparent. Too bad you won't do anything to fix them.

>I get the feeling that anything at all not in agreement with ARRL policy,
>statements, or everything else is "character assassination and baseless

>charges."

It is when you make allegations you can't back up with facts.

>I don't, haven't billed myself as a "radio expert."

Liar.

Jon said: >>Uh, Len, CW capability is a throw-in with just about any
narrowband radio.
>>I'd think that you, a radio expert, would realize that. So why would
>>anyone building a narrowband radio for use in the Amateur Radio Service
>>leave it out? And since CW is widely used in the ARS, what's wrong with
>>publishing designs that implement it?

Lennie followed:

>I don't, haven't billed myself as a "radio expert." I have a lot of
>experience
>in many areas of radio...and as a human being...to recognize the above for
>what it is. "CW" (on-off keying CW) is not a required mode according to
>the FCC, no more so that any other allocated mode on a band. "Widely" as
>in "widely used" is subjective and not quantitative. To say "in the ARS"
>would include the entire amateur bands above 30 MHz because it is not
>specific to the HF region. You made an unsubstantiated claim which
>does not appear to be true; i.e., that is dishonesty.

WHAT "unsubstantiated claim" did he make, Lennie?

>You want to misdirect away from my point that ARRL favors "CW"

>statements in a tone bordering on character assassination with baseless
>charges.

Youa re the one with misdirections, Lennie. Firthermore, it's several
days now that you have been asked to back up your "ARRL is dishonest" claims.
I want to see evidence.

>>Would you favor supression of publication of information about a mode
>>that's widely used and enjoyed just because you personally dislike the
>>mode?
>
>Irrelevant.

No, it's NOT "irrelevant". YOU have made a career out of Amateur bashing
over the Morse Code test question. You were asked a specific question relative
to that mode. It's NOT "irrelevant".

>Jon, you are simply unable to take negative criticism of your employer.

You are not offering criticism. You are making a citeable allegation
under both California and Connecticut law. you ahve been asked to provide
specific evidence of that allegation.

>Neither am I a member of the ARRL or a licensed radio amateur and
>the attitudes presented in here are not conducive to changing either.

Thank God for that.

As discussed in posts eons ago, the average "percentage" of Amateur Radio licensees participating in this NG is far less than 1% of all licensees.

Your chances of being in a fatal car accident are far greater than your likelyhood of having to break bread with anyone in this NG.

If you were going to get a license, it would have happened. You are "here" only to spite and antagonize.

>I simply answer what I care to answer along with references and
>sources to prove facts.

Then WHERE are the "references and sources" to PROVE your allegations about ARRL dishonesty, Lennie?

>I AM having a problem with yourself and others not accepting
>observations and evaluations, of dismissing them with a royal wave
>of the hand as if they do not exist.

You have not provided anything even remotely tangible. Not ONE case of "John Q Amateur, an officer of the ARRL, was [enter dishonest act] and that is why I consider the ARRL dishonest".

>I can reply to demands for scans
>of proof of something and understand the demanders refusing to
>open them up and viewing them, and of making scurrilous charges
>of their being virus-laden and all other terrible things without
>bothering to test for those.

You mean after the first one you sent was an obscene gesture rahter than the information you promised to provide, Lennie..???

>That's par for this course.

Yes, Lennie, such conduct from you IS par for the course.

>I didn't expect much else. I have other things to
>do than argue against Big Brother's faithful disciples about Beliefs.

I am sure that the effort you expend creating your OWN "belief system" is tiring, Lennie.

I am sure being a pathological liar isn't easy.

2571. Re: Len, Lies and Videotape

Well, I sent an e-mail to 'em. The reply was that they NEVER refer to 10 or 12 meter radios as CB. Only 11 meter radios are CB. They are 'clean'. Of course, anyone can buy from them and I STILL don't know any amateurs that own a 10 meter only radio (nor a 10/12 meter radio for that matter).

2579. 5mhz update from NVIS group

Newsgroup: rec.radio.amateur.policy
Date: 2002-07-31 04:46:20 UTC
From: Brian P Burke <bpburke@prodigy.net>
Message-ID: <wYJ19.6015$4h2.95168114@newssvr15.news.prodigy.com>
Source record: 50394

I snatched this off the NVIS group. I wonder if the RSGB findings will
mirror the ARRL findings?

===UK 5MHz Band Starts 01 August 2002===

The RSGB just announced the allocation of 5 channels in the new
60metre amateur band for 4 years of UK amateur radio NVIS experiments.

5260kHz= 1st Working Channel="FA"
5280kHz= 2nd Working Channel="FB"
5290kHz= 3rd Working Channel="FC"
5400kHz= Primary Calling Channel="FE"
5405kHz= Secondary Calling Channel="FM"

A Radiocommunications Agency Notice of Variation (NOV) is required for
UK amateur radio licence holders before operating on these 3kHz-wide
channels. Applications are handled by RSGB. The first NOVs are
expected to be issued on or after 01 AUG 2002. Amateurs may apply for
the NOVs by application forms provided by RSGB (on the website). All
operation is by the use of nets. Channels are +/-1.5kHz from the
listed centre frequencies. Stations will use the word "Foxtrot"
instead of calling CQ, and the first station on a blank channel is
considered "net control", which is passed on to another station after
signing off. More accurate transmitter frequency stability is required
for operation. Communications with military and military cadet
stations is permitted.

Channel Notes:
5260 "FA" [LSB: 5261.5kHz]
Preferred for speech Nets.
0700-1000UTC NVIS Only
Other times: Controlled Nets

5280 "FB" [LSB: 5281.5kHz]
Preferred for CW or Narrowband Data (<650Hz)
24Hours Controlled Nets

5290 "FC" [LSB: 5291.5kHz]
Preferred for Wideband Data (>600Hz)
0100-0259UTC International Tests
0300-0559UTC Data Only
1800-2059UTC Data Only
Other times: Controlled Nets
Times may shift as solar cycle progresses

5400 "FE" [LSB: 5401.5kHz]
Primary Calling Channel
0000-0659UTC Controlled Nets
Other times: Calling Only
Make contact here, then QSY to channels FA,FB,FC

5405 "FM" [LSB: 5406.5kHz]
Secondary Calling Channel
24Hours Calling Only
Make contact here, then QSY to channels FA,FB,FC

Although any mode (except PULSE) may be used if it fits inside the "spot frequency" 3kHz channel bandwidth, the LSB dial frequencies are listed in [brackets] to make it easier for operators to tune in the "Foxtrot" stations. Amateurs traditionally use LSB on frequencies below 9MHz. It is likely that LSB will continue to be the common SSB mode amongst amateurs in the 60 metre band. However, it is possible that communications with the military cadet stations may occur in USB mode.

"NOV" application for UK Full Class A licence holders only:
http://www.rsgb.org/licensing/fivemegs/application5mhz.pdf

This HFpack Bulletin may be forwarded to other amateur radio operators.

2581. Re: Unused frequencies

Newsgroup: rec.radio.amateur.policy
Date: 2002-07-31 05:01:00 UTC
From: Jim Hampton <aa2qa@FrontierNet.net>
Message-ID: <ukern3h2duqa9b@corp.supernews.com>
Source record: 50393

Well, I am not equating radio spectrum to real property. I have a problem when a local radio station goes off the air for over an hour (or, in the last case, changes format from oldies to far-eastern music) - and I call the station at 2:00 PM local time and get a message that the individual will not be back for a WEEK!!! I've news for you - there may be a 'chief engineer' for about 5 radio stations, but there is NOBODY at the controls! One local television station receives its feed from Syracuse ... as do the other stations that the company owns (in NY and PA). What we have here is a ton of companies not unlike Enron. Who cares? Perhaps no one should care about Bill Clinton's escapades in the Oval Office, or the fact that White Watergate proved nothing since some folks were unable (or afraid) to talk. You know something? We'd be better off with Al Capone, since he only skimmed 15% of the action. You're better off with your bookie than with the lottery. NY state skims about 50% from the lottery!!! Think about it! We have the best government money can buy.

73 from Rochester, NY
Jim AA2QA

ps - the more it changes, the more it stays the same.

This is mere speculation on my part, but maybe Jon is very stressed at work. It's a tough job defending an always-honest, never-wrong organization at $75K+ a year. Then again, he may just have derailed his bike deraileur. :-)

Of course, you have to align it with what Dick likes to say, "Go soak your head!" From the ARRL website picture Jon didn't seem to have much hair to soak. He may be very sensitive on that issue. :-)

...it means I am laughing at your ill-mannered behavior. :-)

>Ah, that's right, you're communicating with "Jimmie Boy" since you are
>unwilling to treat others with even a modicum of common courtesy.

I must be communicating with an Artificial Intelligence. That's what
you said I was doing... :-)

>Belittling people and calling them names is self defense? You should write
>your own dictionary so we can look up the peculiar definitions you use.

Tsk, tsk. That old double-standard again. "They" can do it without
censure. :-)

>Oh? Care to be explicit about what I've "done unto others as they have
>already done unto me?" Or is this yet another wild accusation without
>merit that you're unable to defend?

What have I "done unto you," mighty ham person of ARRL?

>Maybe I just need more help, Len. Could you please enumerate the facts
>that support your charge of dishonesty against the ARRL so I can see them
>more clearly? I can't find a single citation on your part of an ARRL
>statement that is demonstrably a lie. Maybe if you'll just post the
>citations succintly I'll see the facts. (Don't bother reposting your
>opinions; those are perfectly clear to me.)

...in other words, waste a lot of time cutting and pasting the same
stuff I've already written because you won't accept any of it and
will just repeat the same "scurrilous, baseless" charge again? :-)

>You mean, Len that you are trying to supress OPINIONS just because you
>disagree with them? Tsk, tsk. How Big Brotherish!

No, I'm just having a ball pushing your very sensitive buttons,
Jon. You are sore as hell and can't take it anymore. Tsk, tsk.

>You're guilty of making slanderous statements about the ARRL.

Nope. I haven't said a thing. The written word would fall under
the heading of LIBEL. Are you so angry you are hearing voices?

>I think all persons are deserving of civil treatment -- even those who
>disagree with you.

Incomplete sentence. You should have added "...except those who
don't say nice about my employer."

>I'm fine with that. So far the readers have seen you make unfounded
>charges of dishonesty and a self-contradictory list of criticisms of ARRL
>for no apparent reason other than personal pique.

Didn't you forget to add heresy, treason, mopery and dopery?
:-)

>Your non-response, you should say. You only called it a loaded question,
>which is how you characterize any question that attempts to elicit some
>substance for you claims of unethical behavior of the party of others.

? You need an ultra-serious response so that you can "properly"
take it apart and be as arrogantly snide as you want to be? :-)

>You've still failed utterly to show in any manner how ARRL has ever tried
>to suppress any organization. In short, this is yet another charge that
>you made up in its entirety.

"Suppress?" No problem. The faithful following, the True Believers
can handle any "suppress" actions. The al-quaida aren't alone in
such stuff.

>Yes, Amateur Radio is still going strong thanks to ARRL.

Oh? According to Amateur Radio Newsline, the report says the
license numbers for the last two years has "stagnated."

That must be a terrible error on Newsline's part then...ARRL
did not pass on that part? :-)

>Not skepticism, just the cynicism you've been spouting.

I'm just a skeptic. If you want the cynic, go to W0BK. He's the
expert on that. :-)

>The extent to which history published by ARRL is correct is a matter for
>historians to argue. Whether the publication is honest is another matter,
>and in making the charge that it is not you are ethically obligated to
>support the charge with something more than OPINION. Yes, I know I'm
>repeating myself and that you are incapable of or unwilling to behave
>ethically, but, you see, I'm persistent, too.

Persistent? No. You just recycled your previous paragraph.

>Because you seem to think that a history that is not all-inclusive is an
>attempt to exercise mind control. I was wondering if that applies only to
>the ARRL of if you are equally "skeptical" of others. By ducking the
>question, you've answered it.

I'm still wondering why you think the history of Australia has to
be in American history. That's very strange behavior.

Also, trying to argue something out of the American Civil War as
somehow pertaining to amateur radio is a little far-fetched. More
strangeness.

I'm just skeptical about the "honesty" of ARRL in all its claims.

I'm very worried about the mental health of some of its workers!

>Your answer to "what was the point" is, "I made a point"? If you can't
>even figure out what point you were making, how do you expect anyone else
>to do so?

Shucks, big ham radio person, I'm still trying to decipher the
Australia and Civil War questions. I'll probably get to your
"point" somewhere next week after the cryptographic machine
quits. :-)

>> "Bloviations?" :-)

>You can also conclude that when you make serious charges you'll be asked
>to substantiate them and, when you prove unable to do so, will impeach
>your credibility and make yourself look foolish.

Will they take away the key to the washroom, too?!?

Oh, boo hoo.

>>>Yep. You tried to convince the FCC to use the power of the government to
>>>proscribe youth participation in Amateur Radio.
>>
>> Is everyone over 13 an adult? :-)
>
>Did I say "youths of all ages?" No, so you can drop that fruitless attempt
>to distract attention from your efforts.

Okay, I'll then have to agree that the maturity and intellectual
capability of licensed amateurs is equivalent to six-year-olds
for Novice and Technician licenses and Extra classes are
equivalent to nine-year-olds. All of those age groups got
the respective licenses.

I just don't agree with it. You seem to agree with libeling
everyone down to immature ages. That isn't nice at all to
your fellow hams, is it?

>No need for that. That you attempted to constrict Amateur Radio growth is
>pitiful. If you thought you would actually succeeed, it's laughable.

I might have if the president had allowed me to use the 82nd
Airborne Division or some tanks out of Fort Irwin.

Amateur radio growth already seems "constricted" according
to Newsline. They call it "stagnant." I didn't have any part of
it and now you are blaming everything on me. How nasty of you.

>> Announcer: Thank you for listening. This has been another public
>> service program from the one, the only voice of amateur radio, the
>> A-R-R-L, the one true faith for all hams everywhere. We were happy to
>> bring you another reasoned discourse on how we were so wonderful, so

>
>Same old stentorian tone, same complete lack of meaningful content. And
>still nothing on which to base your charge of dishonesty. At least that's
>ONE thing you're consistent about, Len.

No, Jon. I've shown that your buttons are so sensitive they can
be pushed by anyone. You just can't take the smallest amount
of negative criticism of your employer and that causes you to
lose all sense of humor. Get with the program. :-)

<aa2qa@FrontierNet.net> writes:

>Well, I am not equating radio spectrum to real property. I have a problem
>when a local radio station goes off the air for over an hour (or, in the
>last case, changes format from oldies to far-eastern music) - and I call the
>station at 2:00 PM local time and get a message that the individual will not
>be back for a WEEK!!! I've news for you - there may be a 'chief engineer'
>for about 5 radio stations, but there is NOBODY at the controls!

That's been a part of smaller broadcasting stations since way
back in the prehistory times of 1956. In that year I worked at
WMCW, a 500 W daylight station at 1600 KHz whose chief
engineer was chief engineer for WBEL in Beloit, WI, 5 KW
directional. :-)

The lady who owned WMCW used to turn off the transmitter
at sundown and she had only a restricted 3rd Class commercial
license. She couldn't sell enough air time to keep the station
solvent and probably used it as a business excuse for
taxation. It was all done legally.

Automation in radio broadcasting began some time in the 1970s
in order to maximize profit at the station by reducing the
production staff. The reliability of broadcast equipment was
already high, the stuff worked and worked with little trouble,
so station managers just let some engineering staff go, too.

The need for full-time engineering personnel is rare. If something
catastrophic happened, such as losing half of a push-pull final,
tube changes plus retuning and checking would cause loss of
about 2 hours worth of valuable air time sales. With today's
modern solid-state "hot swappable" transmitters, an equivalent
"repair" can be done in minutes, not hours...and in all
probability, the transmitter could still operate well enough to
eliminate all loss of sold air time.

US broadcasting makes all its money from ad sales ("air time").
Lose air time and lose income. Station managers know that,
have known it for years. It's their decision. Broadcasting
is something everyone has become accustomed to since
before WW2...there's no absolute rule that it must always be
on the air regardless of circumstances, only a bunch of
prudent warnings about it. If station managers gamble a low
staff count versus possibility of losing their station license
and all income, then it's their gamble. Listeners have to take

what they can when they can.

>lottery. NY state skims about 50% from the lottery!!! Think about it! We
>have the best government money can buy.

This going a bit far afield. Signing off on this thread... :-)

Then you are laughing at yourself. Jon's been very civil and proper. Too bad his opponent isn't.

>>Belittling people and calling them names is self defense? You should write
>>your own dictionary so we can look up the peculiar definitions you use.
>
>Tsk, tsk. That old double-standard again. "They" can do it without
>censure.

Actually, you seem to be the master at it. You love to start this kind of "exchange", then run and hide behind a whole bunch of self-righteousness when it comes back to you.

"Nazi"..."jackboot"..."thug"..."Stevie"...

All from a "professional". Professional "what", we don't know, but I know what you are NOT......

>...in other words, waste a lot of time cutting and pasting the same
>stuff I've already written because you won't accept any of it and
>will just repeat the same "scurrilous, baseless" charge again?

Seems you have no problem trotting out your CV at a moments notice, ergo we must assume that the only things you are willing to repeat are those which are self-serving and support some "point" you wish to "make".

The fact is you have nothing that would stand the scrutiny of inspection as REAL "evidence", and to repeat whatever it was you wrote before won't further your own cause.

>No, I'm just having a ball pushing your very sensitive buttons,
>Jon. You are sore as hell and can't take it anymore.

Jon doesn't tolerate pathological liars anymore than I do. He is, however, far more patient and civil about dealing with them. "Them" being you, of course, Your Untruthfulness.

>>You're guilty of making slanderous statements about the ARRL.
>
>Nope. I haven't said a thing. The written word would fall under
>the heading of LIBEL. Are you so angry you are hearing voices?

Regardless, you have not told the truth, wether by written word or spoken.
A lie.

>I'm just a skeptic. If you want the cynic, go to W0BK. He's the
>expert on that.

Mr. Koehler is not a party to this forum. Of whom did you refer?

(more obvious inattention to detail by an alleged "professional")

>I'm just skeptical about the "honesty" of ARRL in all its claims.

And you've been asked to ante-up to those claims.

Been a week now and still nothing but rhetoric and name calling from The
Pointless One.

>Okay, I'll then have to agree that the maturity and intellectual
>capability of licensed amateurs is equivalent to six-year-olds
>for Novice and Technician licenses and Extra classes are
>equivalent to nine-year-olds. All of those age groups got
>the respective licenses.

So Lennie, the self appointed defender of the subjugated No Code
Technician class license shows his true colors.

Now he HAS managed to insult just about everyone in Amateur Radio, except
for the two faceless entities with callsigns he calls friends.

>>No need for that. That you attempted to constrict Amateur Radio growth is
>>pitiful. If you thought you would actually succeeed, it's laughable.
>
>I might have if the president had allowed me to use the 82nd
>Airborne Division or some tanks out of Fort Irwin.

And although laughable, expsoses his true desire to see Amateur Radio fail.

>Amateur radio growth already seems "constricted" according
>to Newsline. They call it "stagnant." I didn't have any part of
>it and now you are blaming everything on me. How nasty of you.

But...but ...but LENNIE! You yourself have insisted how the No Code
Technician class license was the saviour of Amateur Radio

HOW can it be stagnant...??? YOU said it wouldn't be! Got your "facts"
wrong again?

Gues those early NCT'ers are starting to fall off the 10 year expirations.

>You just can't take the smallest amount
>of negative criticism of your employer and that causes you to
>lose all sense of humor.

Calling someone's employer "dishonest" when no dishonesty is evident is hardly "smallest amount of negative criticism", Your Putziness.

That's about as small as my opinion that your wife is an unemployed prostitute sponging off your retirement?

>Get with the program.

Follow your own advice, Ya Putz.

>
> Incomplete sentence. You should have added "...except those who don't
> say nice about my employer."

No, Len, you've received entirely civil treatment from me. The problem is
that you can't distinguish between criticizing someone's ideas and actions
and belittling the person. That's why on the one hand you take any
criticism of what you say personally and on the other fill your posts with
name calling and insult.

>>Your non-response, you should say. You only called it a loaded question,

It's not for my benefit, Len. You're the one whose reputation suffers when you make unfounded charges. If you want to keep ducking hard questions about your claims, that's okay with me. But I'll continue to ask you to explain them. That's just part of reasoned debate, something that you seem loath to do.

>
> Amateur radio growth already seems "constricted" according to Newsline.

> They call it "stagnant." I didn't have any part of it and now you are
> blaming everything on me. How nasty of you.

No, I'm just blaming you for trying to get the FCC to keep people younger than 14 from participating in Amateur Radio. Fortunately, you failed. Claiming that I'm blaming you for stagnant growth just makes you look even more foolish.

> No, Jon. I've shown that your buttons are so sensitive they can be
> pushed by anyone.

I've noticed that's another tactic you resort to frequently: Claiming when someone challenges your ridiculous statements that they're just being overly sensitive.

> You just can't take the smallest amount of negative criticism of your
> employer and that causes you to lose all sense of humor. Get with the
> program. :-)

Another of your standard, tired techniques is to reply to hard questions with jokes, then claim that those who continue to ask the questions don't have a sense of humor. Really, if you're going to practice misdirection you would be better served to find a less transparent means of doing so. Your repeated use of that and your other transparent rhetorical tricks makes then even less effective than they are inherently. You really ought to work up some new material.

There is a reason for requiring CW which seems to be neglected. A person with just a little training can convert virtually any old radio into an emergency transmitter. No complicated computer, keyboard, bug, key, etc is needed, just two bare wires touched together, or even one bare end touched to the supply (battery, etc). True, the range may not be great and the info transfer speed low, but the method is tere when all else has been destroyed in some disaster.

For sure. It's 35 years for me.

The "Skybird" message was a No-Zark (All-Stations) on HF to the ground-based facilities, mainly aircraft wing command posts and missile command centers, whereas the "Skyking" was to aircraft.

All I can say is that as a Command Post Test and Evaluation Engineer (one of the few such civilian positions in SAC) I had quite a bit to do with the design and testing of the alerting system when the 465-L SAC Command and Control System was implemented in the mid-60s and no, I could not launch the force by myself because my armspan was not the required 12 feet.,,, <ggg>

I wonder whether any of my stuff still exists in the SAC Museum. I visited the only remaining and preserved Titan III site (Pima Air Museum Annex, Davis-Monthan AFB, Arizona) about 10 years ago and there were bits and pieces of my stuff on display.

The things that one never forgets.....

'Twas two years of both Alfa and Bravo net at the 2AF RX site at Barksdale for me under 46th Comm. I found out after arriving in late '68 that my old pal Col. R.O.S. Akre W4ZZZ headed the installation of the stuff at Barksdale in '58. We knew each other after his retirement to Miami.

Ahh, the echoes of Retail, Outweigh, Democrat and Migrate...

>right? In other words, my General ticket will "say it all"?

True, but that's no excuse not to keep "station records." We don't know what the next change to the licensing system will be....

There were quite a few people who did not keep their "grandfathered" technician licenses and had to write the FCC (or the private lookup service) to get proof because they threw out their old, expired license(s). That's NOT keeping station records. I'm excluding the subset who lost the old license(s) by casualty.

>in some disaster.
>bob w4mb

This seems more of a popular urban myth than any actual fact.

Is there a baseline for truth in claims by a referencable project
which has done something like this?

The environment stated for this scenario is "...when all else has been destroyed in some disaster." That is quite all-encompassing and would, probably, include all primary electric power that would operate soldering irons, power tools, lights for visibility, test equipment and so forth. "All else destroyed" may include hand tools, gas-fired flame soldering tools, electronic parts needed that aren't in the original radio-to-be-converted, battery-powered V-O-Ms (analog or digital), flashlights, even hyperopic-correction personal eyeglasses (myopic individuals usually see very well close-up).

The myth seems to have originated when the "All American Five" vacuum tube structured AM broadcast band receiver was popular. In that design all interconnections were by wires soldered manually in place, relatively open hardware-wiring areas, relatively common part values and tubes, basic circuit designs being virtual copies of each other. That was over three decades ago. Those were all powered from primary electrical lines which, according to the hypothetical disaster environment, do not state that such power is available. Real disasters don't have specifiable conditions.

Today's common "radios" (referring to the broadcast receiver variety, AM or FM) don't have much similarity behind the front panel (or inside their cases). Parts are tiny, active devices being "house numbers" instead of having standard EIA markings, circuits done with printed circuit boards with only external wires. Circuit design is quite varied and may even be entirely digital in operation. These radios have one saving grace for this hypo-thetical scenario: They are battery-powered, independent of

primary electrical power except for those which charge their internal batteries.

On the presumption that it is truly possible, consider the environment further. In a real disaster, survivors with broadcast-band radios would be trying to listen in on surviving broadcast stations, not "tuning the bands" in a relaxed, non-disaster situation. There is no guarantee that any unfamiliar signal at a non-standard frequency would be heard at all (how do you check the converted transmitter frequency without some kind of test device?). There is no guarantee that survivors would know enough morse code to be able to interpret such signals if they could be heard. There is no guarantee that survivors would include other radio amateurs or any pre-disaster radio specialist with code proficiency.

Real disasters "when all else is destroyed" mean that survivors must cope with very basic survival needs. NOW. Injured need help, food must be secured, shelter must be acquired. They would not have a luxury of sitting down at a convenient workshop bench to play with converting an unfamiliar radio.

The solution is simple. Use AVAILABLE two-way radios that have voice capability. There are plenty of those, perhaps as many as old-style AM broadcast "radios." Those are very easy to use, require no special schooling to operate.

This isn't the pre-WW2 time, isn't a period when the Titanic must be rescued again and again and again in emotional paeans of the past to the magic of morse. This is the new millennium, 108 years after the birth of radio communication as a medium. Those who deal in disasters have the radios for the purpose, are trained to handle emergencies, continue to train, plan, organize, and work with others. It is better to join them than to pipe-dream convenient-condition hypotheses to keep old regulations about a hobby.

> What I got from Lennie, Jon, was a picture of an adult male exposing
>himself.

The picture was of an airborne converted B-26 medium bomber
used in firefighting operations. Good quality photo, nice lighting,
flying over a forest not on fire. The original camera exposure
seemed correct since the scan did not need any quality
enhancement.

It would appear that most of the aircraft skin is truly exposed
since there is very little painting on it. As such, the aircraft
would appear to be "nude." The aircraft crew is apparently only
two since they are hard to see. The only "frontal nudity" is
that of the aircraft, camera looking at its nose.

> I didn't open any other files from Lennie. if he couldn't do what he
>promised on the first go-around, he expended his privilges here.

I have now sent a total of four scans of my first First Class
Radiotelephone Operator certificate as originally requested in
a public message. The requester refuses to open each one.
Is he afraid? Why did she request it in the first place?

>open the attachment as I have told His Putziness that he wasted away any
>opportunity to demonstrate any civility or responsibility.
>
> Sorry, Lennie...you blew that shot...Wasted it...You offered a copy of
>your GROL.

No. I offered a scan of my first First Class Radiotelephone Operator (Commercial) certificate, both front and back sides, back side including signatures of three broadcast station engineers attesting to my service with those stations. That was granted in 1956 and good for 5 years. Renewals were all for 5 year periods until the General Radiotelephone Operator License ("GROL") replaced all three original classes.

>You sent me an obscene picture.

What was sent the first time was a good quality JPG-format photograph of a converted-to-firefighting B-26 aircraft over a forest. I can send that one to anyone who is interested in aircraft-as-obscene-objects. :-)

>I'm not "chancing it" on another opportunity for you to wallow in.

I have sent my file "Attach L 150.ZIP" in private mail again. This will be the third time the same file has been sent in private. It is different from the original "ATTACH L.ZIP" file only in the resolution dropped to 150 DPI from original 300 DPI to reduce file size for easy transfer.

I have complied with the original request more than once. None of my e-mail file transfers contain any known, detectable viruses, are all in common formats.

Scurrilous, baseless charges will be found empty, void, ridiculous upon on any investigation of files or file contents by competent ISP technical representatives.

>Not the first time you've insulted all amateurs as a group.

GOOD cutting and editing! :-)

What I said in its entirety was that (in caps) I DON'T AGREE WITH
YOU. Note that I said (above) "I'll then have to agree..." I didn't say
that I agreed with all of it, did it? Of course not. You cut off enough
to make it look bad towards me. :-)

Good job, Jon. <pat on head>

>No, I'm just blaming you for trying to get the FCC to keep people younger
>than 14 from participating in Amateur Radio. Fortunately, you failed.
>Claiming that I'm blaming you for stagnant growth just makes you look even
>more foolish.

Oh, my. A virtual Crime Against The State! I made a comment to
the FCC 3 1/2 years ago, didn't make it a big thing then, haven't
pressed it since. Suddenly it's become a Crime Against The State!
:-)
I didn't "claim" anything. I made a simple declaration that I was
not responsible for the reported stagnation of amateur radio licensee
totals in two years. I'm not. How do you reach those scurrilous,
baseless ideas? :-)

>I've noticed that's another tactic you resort to frequently: Claiming when
>someone challenges your ridiculous statements that they're just being
>overly sensitive.

Now, now, Jon, calm down. You just claimed all my statements
are "ridiculous." :-)

If they are all "ridiculous" they can't be humorous, can they?

>Another of your standard, tired techniques is to reply to hard questions
>with jokes, then claim that those who continue to ask the questions don't
>have a sense of humor.

Oh, gosh and golly, Jon. You haven't yet shown any positive
proof that ARRL is always honest in its statements. You've
simply stated ARRL *IS* honest, believe it!

I think that's humorous...especially when written so SERIOUSLY.
:-)

>... You really ought to work up some new material.

Why? No pay coming in for this for me. ARRL pays you $75K+
annually, right?

As the old saying goes, "you get what you pay for." So far, Jon,
I haven't seen $75K worth of words from you. Maybe 75 cents.

Bob, I'm reminded of a movie where a plance crash lands in the desert. A toy maker is put in charge of making it flyable again, only no one know that he is a toy maker.

I often contemplate TEOTWAWKI and instead of trying to cobble together a
transmitter from a 1958 television set thats been setting at the landfill

and getting rained on since 1971, I cobble together the internet from all the old PC/XT's at the Salvation Army store. Everyone should be made to kep current in DOS 3.21

Jim,

Bob's is NOT clean. They sell those Galaxy 44, 88, and 99 models, for
example,
that are not certified for sale in the US. He also proudly proclaims that
he is a member of the "New England Chamber of Commerce". I don't think the
Chamber would be pleased to know that one of their members deals in illegal
products. I pointed this out to them in my email--he has not replied. So
my two
dimes are at the ready: one for FCC, one to the New England Chamber. I am
deadly serious about this issue, and I mean to do whatever I can to stop
those
clowns from taking the 10 and 12 meter bands over.

Dave, isn't your suffix, "MN" short enough?

Do you want to wait around for the actuarial tables to make "EE" available?

I understand what you're sayin, but how were they to know that they'd need those old expired licenses years later? As late as 1994, FCC was renewing "old" (code tested) Techs as Techs, not Tech Pluses.

>I'm excluding the subset who lost the old license(s) by
>casualty.

Still puts an unreasonable burden on the licensee, I think. However, it will most probably be a moot point in about a year.

And what did you learn from all those 275 'chat qso's' ??
Did you find out what rig and/or how much power he/she was running?

Did you learn he/she had a 2 element QUAD, a 3 ele yagi or maybe a dipole?

What about the 'required' signal report? and of course the 'must have' WX
here is report.

Ham radio is diverse enough for everyone. Even you.

Jerry, I really don't care - so long as they stay out of the amateur bands. If they want to stew in 11 meters, so be it. The real problem is that there IS a market for the radios and no one wants to miss the buck$. They figure that if they don't sell 'em, someone else will. I'd like to see that bill going through congress making the CEO responsible for 'funny accounting' expanded to willful violation of any laws. Unfortunately, once you have a corporation, the folks in charge have entirely too much protection from just about everything. Hmmm ... look at EEI. Sell its' profitable business to a new corporate entity, file bankruptcy, and the FCC and creditors can fight over the bonepile. Meanwhile, back at the ranch, the same CEO with most of the same folks set up shop under a new corporation. Plug that loophole and you may have a shot at fixing the problem.

> But I want El Supreme DXer to pre-approve it.

Who is "El Supreme DXer". What DXpedition is "pre-approved"?

> Otherwise it won't count as my other DX activities haven't counted.

Your other DX activities haven't counted for DXCC credit? Is that what
you're saying? If that's the case, you can really save some time by not
bothering with those neatly lettered QSL cards. In fact, you can save
much more time by not operating at all.
```

> >
> Previous to that.

I didn't write anything about the matter previous to that. You asked if
you were supposed to tune. I responded that tuning works. I did not
state that tuning the band is exclusive of other things. I don't care
if you sit in front of your computer screen and only respond to packet
spots. You wouldn't be alone.

> Practice" handbook?

I wrote what I observed. We now have a case of you arguing with you.
It is either that or you aren't expressing yourself as clearly as you
think you are.

> > > > > You must still be confused. You claimed that you would continue to

> > I wrote.
>
> Yes, you keep saying that. Now how do you conduct yourself on the bands?

That IS the way I conduct myself on the bands: I need only concern
myself with operating where I AM PERMITTED TO OPERATE. I am not
responsible for how or where a fellow in another country operates his
station.

It may be time to re-read some of your stuff, Brian. You brought up
Part 97. I did not.

> Unless you meant that "General" Aideed doesn't pay US taxes.

Indeed! Aideed? I did? Didn't even know he was a ham.

> > You did. You wrote: "Part 97 doesn't say I cant' be DX or work DX

about my favorite hobby.

Sorry. The information you request is available as part of my "CW and
Forty Meters" package. I'd think a sharp student of DXing such as you
would not need additional tutelage anyway.

> > > I think Part 97 doesn't say squat about DX, but you're free to interpret

Let's see if we can make that point. Was your operation from Somalia
accepted for DXCC credit?

> > > On a scale of 1 to 100, with 100 being the most brilliant DXer ever,

I've already said that the comparison should be between me and you. You
can put me at 100 if you like. I'll agree that 15 is about right for
you.

> > > > > > > > > Dave, you don't go by what I've stated here. You go by a

No. YOUR logbook certainly must. Additionally, your posts here
regarding DXing fit that pattern.

> > > > Write them in your log? By hand? Dark ages, man!

Let's not get lost. Any of the guys on Diego Garcia supposed to happily
agree with you that ragchewing is DXing. Izzat your story?

Should I cut off my fellow
> countrymen because they've exceeded the 12.3 second El Supremo DXer QSO

I think you have it wrong again. You feel that way only because someone
hasn't believed you to be a DXer. Did your operation from T5 count
toward DXCC?

Not funny or odd in the least. Does say a lot for your hypothesis though.

Why are people who "take advantage" of the new licensing requirements any
different than you, who admittedly is taking advantage of things in your
life, Larry?

Ain' that the truth, Steve. There seem to be a number of hams out there
who hate darn near everything about the ARS. Go figure why people would
want to have a hobby they hate 8^)

>
> PS...Are you part of SETI?

I was for a while, but I disconnected after they had the repeating packet
incident (for about two weeks I was reprocessing the same batch of data)
Then I just didn't get around to signing back up.

All that and more, like occupation, family, hobbies, interpreting facts about where they live, ect., not just wham bam signal report, qsl info and goodby. I never claim that no one should go for a DXCC, just don't claim it is some major feat that somehow makes one head and shoulders above everyone else. Like I say, a DXCC award and a few coins will get you a cup of coffee, nothing more. It isn't some heroic accomplishment.

Long before Larry's time, hams had to answer essay type questions,
draw schematics and explain how the circuit worked. When Larry
took his exams, it was all multiple guess, there were even books
that gave you the questions and answers for the test, so he is a
dumbed down ham as well.

He's not a toy maker. He's an airplane designer. But he designs model airplanes. Big difference between toy airplanes and model airplanes.

The resulting airplane did actually fly. But it crashed and killed famous stunt pilot Paul Mantz, who was at the controls. He had come out of retirement to make the film.

Bob,

I'm all for retaining code testing, and I have designed and built much of my ham gear. But that reason won't keep the code requirement. Here's why:

The disaster scenario is possible only if the person has the skills, knowledge and resources to make the conversion. The skills and knowledge required go far beyond that required of the amateur license tests. So even if all hams have to learn the code, there is no requirement or guarantee that they be able to build even a simple transmitter.

Of course many hams could build or convert an emergency transmitter in a disaster scenario - but only because they took it upon themselves to learn things not on the written tests. Apply the same logic to code tests.

FCC regulations still require that "station records" be kept. Historically,
that would include contact logs and such which are not required today.
However, it would also include a license history (which is the part I refer to)
and correspondence to/from the FCC. Repeater owners would also include their
coordination documents (for those areas which have such a function). Spread
Spectrum experimenters (until recently) would also include information on that
mode. Former RACES affiliate stations would have documentation pertaining to
that. Etc., ....

The general requirement to keep records is for ALL services, not just the
amateur service. There is nothing in the amateur service rules that says that
stations/people licensed in the service need not keep any sort of records.

>>We don't know what
>>the next change to the licensing system will be....

```

>(code tested) Techs as Techs, not Tech Pluses.

Because expired-term licenses are part of the "station records" that they are supposed to keep.

>>I'm excluding the subset who lost the old license(s) by
>>casualty.
>
>Still puts an unreasonable burden on the licensee, I think. However, it will
>most probably be a moot point in about a year.

Why? It's just one more piece of paper that gets filed by most and never seen again.

I still have the CSCE from over 10 years ago where I passed the elements that gave me my first license class (I've held licenses of two different amateur classes since). (I have all the others too). Why? To show what I passed and when and to fulfill the requirements of the regulations.

Yawn! Not that old saw again.

A couple of quick reality questions...

What "old radio" would be used? Rube type? SolidState?
What frequency would it transmit on?
Who would be the recipient expected to be "listening"?

Preperation for emergency must be done BEFORE such
things happen...not after.

Cheers,
Bill K2UNK

Have it your way, Dave.

Hanging around a Booney Pepper BBQ with KH2D and a cold one sure beats the hell out of a 12.63 second QSO. We might string up his 24 element 6M delta beam on a rope between two palm trees and work the US longpath.

Even IF such general regulations exist, they clearly are not intended
to apply to amateur stations since there just is no historic record
of any need to do so...and, since even contact logs have been
determined to be not needed by the FCC.

I don't buy that at all for amateur stations.
Indeed, the "license" today doesn't
even require the station be "recorded" in
any means as to exact location, equipmewnt, etc.

No such regulations require you or me to keep any of that.
Retention on your part is simply a matter of personal choice for hams.

Perhaps Phil K will weigh in on this also.

Cheers,
Bill K2UNK

Lets see, my house has just been swept away by a flood, all the
power is out, I am hanging on to a tree for dear life, but wait,
there comes floating along an old Silvertone radio. I'm saved, all
I have to do is rewire it and make a transmitter. Now all my cw
training will save the day.
My plane just went down in the swamp, all the electronics were
damaged so no radios work. Now all I have to do is find an old
tube radio and make a transmitter. Now all my cw training will
save the day.
I'm not discounting knowledge of Morse code, but get real, but how
many times have you heard of someone cobbling together a cw
transmitter out of some parts and being saved.

What rule? Did you have an argument or a point to make regarding my
statement that I do not hold a 1 x 2 callsign under the FCC's vanity
regulations and my doubt that Len's blanket statement held true for a
number of others posting here? Was there another purpose for your post?

We all know that. But if I contact any guys operating from Diego
Garcia, they'll confirm that ragchewing is DXing? Do I have your
thought pretty well summed up?

> Dave, do we really have to go through every country on the list for you to
> see that a 12 minute QSO qualifies for DXCC credit just as much as your

> Well Dave?

Well what? I've already agreed that the QSO counts for DXCC. This is
just a little path around the issue which you wanted me to see. It's
nice but it doesn't change my mind about you not being a DXer.

Was your operation from Somalia accepted for DXCC credit or were you
simply wasting the time of DXers with windy QSOs that didn't count?

>Message-id: <20020731170054.26383.00000111@mb-bd.aol.com>

Hmmmm...for several days now, Lennie Anderson, an alleged ex-radio technician, or something like that, has been repeatedly asked to provide the substantiation of his allegations of "dishonesty" on the part of teh American Radio Relay League.

Let's see how the college educated 'professional" has responded today:

>>I agree, yours were libelous statements; my mistake.
>
>I didn't say my written words were libel. You did. Now prove
>your charge of libel.
>
>Did you need a Miranda warning?

No answer there.

>>No, Len, you've received entirely civil treatment from me.
>
>...as master to serf, headmaster to student, etc., etc., etc.

There either.

>>The problem is
>>that you can't distinguish between criticizing someone's ideas and actions
>>and belittling the person.
>
>Tsk, tsk, tsk. Looking in the mirror again?

Nor there.

>>That's why on the one hand you take any
>>criticism of what you say personally and on the other fill your posts with
>>name calling and insult.
>
>Heh heh. How do you know my state of mind? Are you telepathic?
>[telepathy claims seem to be coincident with proficiency in morse]

Not even an artful dodge there. Pretty lame.

>>It's not for my benefit, Len. You're the one whose reputation suffers when
>>you make unfounded charges.
>
>"Reputation?!?" In what?

In what indeed. In THIS forum he is well known for his rants,
antagonistic belittling and his pathological lying.

Not much of a reputation to screw up there, for sure!

>>If you want to keep ducking hard questions
>>about your claims, that's okay with me.
>
>Is duck season open? If it isn't you have to send the Fish and
>Game folks after me.

Why? Is it skunk season? Probably should be with the stinky way you keep
answering bonafide questions with childish tripe.

>>But I'll continue to ask you to explain them.
>
>No problem, Lone Stranger, but you keep forgetting your own
>silver bullets. You haven't yet offered proof that ARRL is
>totally honest in all its claims, only that the ARRL claims it is
>honest.

Proof of ARRL's honesty abounds. You, however, have yet to provide one
valid bit of evidence of any DIShonesty.

Still nothing.

>>That's just part of reasoned debate, something that you seem
>>loath to do.
>
>No, kimosabe, this is an Internet newsgroup, not a formal debate.
>You are NOT both moderator and speaker-for-one-side. There is
>no moderator here.

Then your frequent "reminders" about the "nature" of the NG are just
rhetorical smoke blowing, right?

Your OWN admonsitions to "debate civilly" are for WHAT purpose?

>>Duck-and-cover...
>
>? Virtually suppress. Note the qualifier.

Ahhhh..."qualifiers"...Any excuse to get out of being held to something,
eh Lennie?

>Can you spell J-I-N-G-O-I-S-M ?

Can you? Do you read your own stuff, or do you have a 10 year old ghost
writing for you?

So, another day...another opportunity missed by His Lyingness to set his own
record straight, or to at least impress us with his investigative prowess by
ante'ing up the requested "evidence" of misdeeds or dishonesty by ARRL.

Just more putziness.

Steve

With one of the crewmen exposing himself. As I said..."cute", but since
it was NOT what you first ofered to send, I have no other reason to trust any
other e mail file you may send.

>I have sent my file "Attach L 150.ZIP" in private mail again. This will be
>the third time the same file has been sent in private.

Make it 33 if you care to. You gave me more than ample reason to not
trust you...again.

>Scurrilous, baseless charges will be found empty, void, ridiculous
>upon on any investigation of files or file contents by competent ISP
>technical representatives.

Too bad AOL doesn't enforce what they preach very well. I am sure a copy
of your post offering your license and then followed by a picture of a B-26
with an "exposed" crewman certainly violates TOS.

But I know you have never let anything like facts or rules bother you.

Just like you don't let lying cause yu to lose much sleep.

Would FM be allowed on channel "FM"? :-) Of course not, as
FM would have too much bandwidth to support voice.

Yes... I have seen that one, but re-useable storage seems more effective to me. My laptop would be able to use those mini CD's but the home pc won't. I have a Zip drive in all of my PC's except the laptop, but that has an external zip.

As far as cable connectivity, I am seriously hating the USB descrimition now.... I mean, if you don't have a USB connection, you are screwed it seems. My laptop is just old enough that it does not have a USB connection.

The movie _Dr Strangelove_. I know someone in the air force who used to baby-sit
nuke missiles in Minot ND. He said "Peace is Our Profession, we kill for a hobby. :-)" Minuteman missiles IIRC. He had one of THE keys.....

I started this thread a week or two ago. And that was a brief mention
of having heard freebanders in the bottom end of 10 meters. Didn't
expect it to mushroom into one of the biggest flame wars in the last
few months in RRAP. Though nothing can touch the "one step closer
to extinction" flamefest.

Nothing has changed my mind since the material you've posted here
indicates you don't know much about DXing.

> > Was your operation from Somalia accepted for DXCC credit or were you
> > simply wasting the time of DXers with windy QSOs that didn't count?

> Don't know.

You don't know? How would a DXer not know? If your /T5 operation
didn't count and you had no permission to operate, why that would
certainly cast doubt on all of the drivel you've posted about your
morals and ethics. Additionally, it would make you a bootlegger.

I've never operated from a foreign country where I had no license to
operate and where I wasn't certain that my operation would be accepted
for DXCC credit.

Len doesn't have a valid rule. K0HB isn't a vanity call. N2EY isn't a vanity call. W3RV isn't a vanity call. There'd appear to be more "exceptions" than validity to Len's "rule".

Did you have an argument with my statement? A disagreement or misunderstanding over what it meant? Maybe you're just playing "Mini Me" to Len's "Doctor Evil"?

No Burkie, "EE" would be a hideous callsign to take into the pileups.
I have "RV" for the same reasons Dave has for holding "MN". You
wouldn't get it even if we explained it so I'll spare ya the
bandwidth.

Wouldn't the issuance of the license that resulted from those CSCEs prove the
same thing? If you have the license, why keep the CSCEs other than for
sentiment?

It's happened a few times in the distant past. Could happen again, but highly improbable. More likely is the repair of existing-but-damaged radio equipment.

The "big problem" is simply that the person doing the cobbling would have to have the resources, knowledge and skill to do so. In all cases I know of where someone built a transmitter under disaster conditions, that person was skilled in transmitter construction before the disaster occurred. Is such skill and knowledge a license requirement today? Nope.

Go down the disaster scenario path enough, and a soldering test makes a lot of sense.

And when things don't go according to plan, just throw up your hands and capitulate. If you really believe that all the planning you can do will take care of you its because you don't choose to understand your own reality. Virtually every HF ham rig made comes ready for use on CW.

The point is simply that when a ham knows how to use CW he has a very flexible communications tool which you code haters will never have available.

Dick

Ryan, why not add one?

This new e-machine 'puter has a USB on the front for portable devices. Just
like most televisions have a port on the front for videocam hook ups.

Dave, you must have missed the news.

I went to Somalia, not as just another State Department paid DXpedition, but as part of an Armed Forces Expedition. We used Forced Entry, not an invitation from the host country to establish diplomatic relations. I was in a little riskier business than you were in. There was no active host Government in Somalia. There was no Telecommunications Authority in Somalia. There was no active American Embassy in Somalia. There was no electricity in Somalia. There was no running water in Somalia. There was no food in Somalia. FWIW, there wasn't much of anything, except misery. Wished you were there.

Brian, N0iMD/T5

Actually, this group is very much like the Inquisition.

Dick, every rig I've ever owned also had a microphone. Unless you are
talking about those cult kit radios meant to provide a few moments of fun
while on a camping trip.

More hams know how to talk than how to didah. Why do you continue to swim
upstream?

I'll agree with that assessment. There's no reason that soldering an 8-pin microphone connector or a db-9 connector, and a pl-259 shouldn't be part of the exam.

How about using a VOM to measure several different parameters of a circuit?

bands.

That's just it. I wouldn't spend much time stewing about it if the truckers
weren't
in the 10 meter band. But they ARE on the Amateur Bands, and I'm not going
to
just sit by wringing my hands and hoping somebody "else" does something
about it. I am just an average ham, but I CAN visit truck stops, CB shops,
listen for
trucks on 28.085, document what I hear, and send the results to the proper
authority. That's exactly what I mean to do.

You made disparaging statements about ARRL that have been proven false. QED. Of course, you could disprove the charge if you could show that your statements were true. But you can't, because they aren't, as has been shown.

[much silliness from Len snipped]

Fortunately, the more you natter on, the more foolish you make yourself look.

Didn't need it. Didn't work you. Whether or not I submitted cards has
nothing to do with it. Those who needed T5, worked and QSL'd you would

be hurt if your operation wasn't accepted. You'd surely know one way or the other if T5/N0IMD counted or not. If it didn't, that'd be minus one on the way to 330.

Is it a lame assertion if your operation doesn't count toward DXCC and
the "authority" granting you permission to operate had no right to do
so? Surely you knew that as a self-proclaimed moral and ethical man
that your actions were neither moral nor ethical.

> > I've never operated from a foreign country where I had no license to

> Dave, you must have missed the news.
>
> I went to Somalia, not as just another State Department paid DXpedition,

I never went on a State Department paid DXpedition. I traveled in my
work. All of my licenses for overseas operation were issued by the host
country. I have passport entry and exit stamps. I held residency
permits and visas for every country to which I was posted. I resided in
each country for two to three years.

> but
> as part of an Armed Forces Expedition. We used Forced Entry, not an
> invitation from the host country to establish diplomatic relations.

No kidding?

> I was in a little riskier business than you were in.

Not necessarily so, Brian.

> There was no
> active host Government in Somalia. There was no Telecommunications
> Authority in Somalia.

So someone who had no authority to do so gave you permission to operate on the ham bands? That'd make you a bootlegger. So you operated despite the fact that you knew your operation would not be credited toward DXCC and you laboriously made out QSL cards which were NG for awards purposes.

> There was no active American Embassy in Somalia.

The American Embassy does not issue amateur radio licenses in any country.

> There was no
> electricity in Somalia. There was no running water in Somalia. There > was no food in Somalia.

Ditto Guinea-Bissau, Sierra Leone and partially true for Tanzania.
Your point?

> FWIW, there wasn't much of anything, except misery.
> Wished you were there.

No thanks. I'm trying to give it up.

That simply isn't true. I did everything but draw you a map on your A-1
op listing (and that was simply an attempt at a "Nyah Nyah" which blew
up in your face). I've been very forthcoming with my DX operating
practices or you'd have known nothing of them at all.

> But here you are volunteering all kinds
> of information about everyone else. Good work. Glad to see it.

Did you have an argument with my statement? A disagreement or were you
just stopping by for coffee?

Here's another interesting page. ï¿½Pink Lightning Communicationsï¿½ï¿½ï¿½1575 Donna Road, West Palm Beach , Fl 33409ï¿½

http://www.pinklightning.com/

This is a company that sells Big Rig Truck Chrome & Accesories. Some of the accesories they offer drivers are a variety of marine and "10 meter" radios.

Example:

http://www.pinklightning.com/Ranger.htm

"Rangerï¿½ RCI-6900FTBï¿½ $489.99ï¿½ Peaking&Tuning Extra Charge! Buy it Untuned $489.99 Or Get it Peaked&Tuned so it'll Scream! for only $519.99"

When questioned, they reveal that "Peaking & Tuning" means they do the "mod" that enables the rig to transmit from 25-32 mHz.

This site is only a drop in the bucket. The 10 & 12 meter band have turned out to be big business for the trucking industry. Manufacturers like Ranger, Uniden, Galaxy, etc. collaborate by providing clip-n-transmit CB-style radios that cover 10 & 12 meters.

> right? In other words, my General ticket will "say it all"?

That's what I did. Except I was an "old tech", i.e., Novice code
and general written. And I took the old tickets to a VE session
to upgrade my license to lock it in. While I was doing that I
took and passed the extra tests and now I'm an "extra lite" :-)

When you get on HF, be mindful that when you hear an SSB
QSO on some frequency, a USA ham may not necessarily
be allowed to use SSB on that freq. As it's in a data/CW
subband for us, but some other countries don't have subband
rules like we have here. So check the freq before talking.

Erik wrote:

> Ah, what's one more piece of paper! :-) Can't hurt.

My current ticket is hanging on the wall of the shack in
one of those Kmart document frames. And I kept the
expired tickets behind a piece of blank paper but
in front of the cardboard back in the same frame. Came
in handy when I needed proof of my "old tech" when
I upgraded to extra back in '00.

I still keep logs but that's just so I can see what I've done
in the past. For informal WAS and such. I don't need
wallpaper, I know that I did it and that's enough for me.

Unlike other administrative laws (e.g. Internal Revenue Code), the
Communications Act doesn't seem to have a records retention period of
limitations that I am aware of.... If no such section to the Act or its
regulations exists, then you're stuck with it forever (until death).

>sentiment?

To indicate which VE group administered the examination (who, where, and when)
and who signed off on it.

Remember that sometimes a VE group gets audited by the FCC (or their VEC) and
that can happen up to 3 years from the respective January 31 where the VE team

turned in their expense report. The ability to audit is also for the conduct of testing, not just the expenses. Obviously, current license turnaround now is about 2 weeks, but even so, suppose the FCC audits a session, decides that testing irregularities happened, and voids (or asks for retests) of all the candidates. You get a letter to that effect, but it's a mistake because you got your recent license/upgrade via a different group. If you tossed your CSCE when the new/revised license came, what's your proof that you didn't use that test session/group that's under investigation? The FCC can make errors too.

Granted, the chances of being involved in an FCC audit are probably 1/10,000th of that of an IRS audit (currently 0.5%), but both do happen.

> Ah, so now "differing opinions" equate to "knee-jerk rejection?!?"

Not at all. From long observation, it's clear that you reject ideas
from certain sources almost by reflex. You are very, very predictable.
>
> I'm NOT looking for "praise," old-timer...YOU are. You know it.
> Nearly every other reader knows it.

Nonsense. I'm not the one retelling his CV in practically every post -
you are. You want your experience in nonamateur radio to somehow qualify you as
an expert in amateur radio policy. Not gonna happen.

> You get

[expletive for "angry" deleted)

>every time someone doesn't approve of CW or the thousand and one

HAW, that's almost funny. I'm not the one making fun of people's names, jobs,
hair loss, weight etc. - you are.
>
> >No. AGE. You make a big deal about how old you are vs. how old I am.
>
> I'm not trying to pose like an eightysomething old-timer guru with a 1x2
> "from the old days."

Who is doing that? Not me. My age and experience are well known. FCC
did not give calls like mine to hams until the 1970s.

It's clear that my knowledge, skill and experience really bother you.

> >But none as a radio amateur, making small-scale decisions with limited
> >resources.
>
> Small-scale is as small-scale does.

Is small-scale bad? Sounds like you place no value on it.
>
> Oh, and the HRO catalog prices rather belay the "limited resources,"
> doesn't it?

Not at all. I've never bouht anyhting from HRO. I build my ham radio equipment
myself.

> >So? You provide us with lots of criticism of ham radio, but no positive
> >vision. No new ideas.
>
> I provide you and other pompous types with tons of negative criticsm
> about you and your cronies putting down larger-scale folks. You don't
> like it. Tough. It isn't going to stop now.

I see. Your mission is simply to criticize, be derogatory, and make
snide remarks. So much for your "leadership" or "expertise" - they're
nonexistent.
>
> >>I don't use JUST my age, but decades of observation of INDIVIDUALS

>
> Who knows?

Obviously you don't know.

> Less than a quarter of US hams are ARRL members and
> the ARRL didn't get what it wanted in Restructuring, did it?

ARRL got some of what it wanted, but not all. Same is true of NCI.

In typical fashion, you avoided the question. Why? Is the answer too
embarrasing for you to handle?
>
> NCI is solely a political-action membership organization built around one
> goal, the elimination of morse code testing for any amateur radio license.

We all know that. NCI did not get all of what they wanted in the
restructuring, however, even though they did not ask for a total
elimination of code testing right away.
>
> The ARRL stance on morse code testing is NULL, nothing, they don't
> commit one way or the other.

Incorrect. ARRL policy is to neither support nor oppose S25.5. ARRL
policy supports continued code testing in the USA.

> The IARU is on record as eliminating the
> ITU-R recommendation.

So what? The ARRL policy was revised AFTER the restructuring. It could
be revised again. I would not be at all surprised if the policy
changed before or slightly after WRC 2003.
>
> If the ARRL is "the most representative organization" then it isn't
> "representing" anyone but the 170K or so membership, is it?

If NCI is "the most representative organization" then it isn't
"representing" anyone but its 2000 or so membership, is it?

> Even then
> there are ARRL members who side with NCI's aims and goals.

Of course. ARRL does not require allegiance to a set policy on code
testing as a condition of membership. NCI does.

> >My point is simply that since ARRL membership is not a requirement, many
will
> >not join.
>
> Oh, do you now want legislation to FORCE US amateurs to be ARRL members?!?

Where do you get such ridiculous ideas?

> >What is your explanation of "why that majority of radio amateurs are NOT
> >members"?
>
> You can't read well, can you?

Yes, I can. You don't write very clearly, however, and often don;t
answer simple questions.

> I ALREADY wrote why.

It wasn't clear at all.

> The majority can't see
> having to join an old-timer club that doesn't listen to them, agree with
them,
> just lectures to them about the "old days" of "old ways," the "proper way" to
> "have fun" with the old ways like the old-timers did in the old days.

How do you know this is the case for all, or even most, of the US hams
who don't belong to the ARRL? How do you know there aren't other
reasons that are more important?

Your bias, prejudice and bigotry against the ARRL are very clear.
>
> >Why? You don't accept my experiences, opinions, and facts - why should I
> >accept yours?
>

> big electric motors as being anything worthwhile in amateur radio. If you
> think that is in any way a "qualifier" for your "expertise," go grab a P&ID
> and have a ball...somewhere else.

That's not an answer to the question. Typical.

PLCs are used for a lot more than "to control big electric motors". Somebody
who really knew about "radio and electronics" would know that.
>
> I don't accept being lectured about the "importance and necessity" of
> morse code testing in amateur radio when morse code testing isn't a
> mandatory mode of operation or used in most other radio services.

Ah - I understand. You want amateur radio rules to be based solely on
what is done in other radio services, not on what hams do.

Why should anyomne "accept" your endless lectures?

> I don't accept the "importance and necessity" when it can't be proven
> with any validity except that it was once very important.
>
> I don't accept being told that vacuum tube circuitry is the ultimate high

> >
> >You, on the other hand, are focused on somthing else...
>
> I am focussed on eliminating the morse code test for an amateur radio
> license. It's not a coincidence that NCI is focussed on the same.

You are focused on a lot more - like age limits for an amateur
license, even though you provide no evidence of problems caused by the
licensing of young people.

You are focused on things that will damage and eventually destroy amateur
radio. That's why all the criticsm and opposition of the ARRL - you know that
without at least one strong national organization "of, by and for the radio
amateur", ham radio will slowly be legislated out of existence. You'd like
that.
>
> You still haven't explained why eliminating the code test is "not in the
> best interest of amateur radio." Explain it.

I've explained it for years now. You don't read very well. Try google.com
>
> Tell us why you wish to exclude so many US citizens from an enjoyable
> hobby.

I don't want to exclude anyone who can meet the requirements. You want
to exclude millions of citizens based on age alone. Who is the
exclusionary and who is for freedom?

> Rationalize why you wish to keep the below-30-MHz spectrum
> an exclusive playground only for those who can test for morse code.

I don't want to do that. I think ALL hams should know Morse code, and pass code
tests to get a ham license. FCC thinks differently. I've expressed my views to
the FCC, and they disagreed without being insulting.

You, however, cannot tolerate a difference of views without being insulting.

> >>What you fail to understand (or don't WANT to understand) is that

>
> Ah, yes, "simply mistaken."

Yep. Just like the FCC was mistaken to put the cb service on 27 MHz
and think that people would follow the rules.

> >>They aren't against USE of
> >>morse in amateur radio activities, just against the code TEST.
> >
> >Can you guarantee that 100% of those against the TEST are not against the

> desires come to be the baseline.

Your knee-jerk rejection of valid reasons doesn't make them invalid.

--

Give us some valid reasons for your proposed 14 year age requirement. Pictures
of six year old hams who have met the FCC requirements are not "reasons".

I think you can't come up with any valid reasons, nor an example of where the
licensing of young people has caused problems for the ARS.

I thought this was especially bold:

(http://www.pinklightning.com/Magnum.htm)

"New for Summer 2002 BigRig Series 10 Meter Radios"
"Looking for a RIG that talks BIG? Walks the walk and
talks the talk with this no-nonsense radio. "

Note that the new generation of trucker radios comes equipped to
transmit from 25-32 mHz. Nowhere is there any mention that 10 meters
is a ham band - or that it's not OK to transmit there. In fact,
exactly the opposite impression is given.

Which, no matter how anyone slices it, is patently rediculous.
Given the multitude of hams that have been scrutinized by the
FCC over the years, if document retention (other than anything
specific in Part 97) was intended to apply to hams, then the FCC
sure would have applied it to someone by now.

Sounds like a risk I can live with.

> Granted, the chances of being involved in an FCC audit are probably
1/10,000th
> of that of an IRS audit (currently 0.5%), but both do happen.

But no example of any unique document retention (licences that expired,
CSCEs, station logs, etc.) have been brought forward to show any
retention is needed at all.

Cheers,
Bill K2UNK

Not at all...but I sure wouldn't be trying to cobble together some
type of impromptu CW tranmistter from an old radio laying around.

> If you really believe that all the planning you can do will take
> care of you its because you don't choose to understand your own reality.

No one can prepare for every eventuality...but this morse
myth about building a CW transmitter from an old radio
in the midst of some disastor is truly pathetic.

> Virtually every HF ham rig made comes ready for use on CW.

So, just how does having an HF rig capable of CW play into the original folly espoused above which suggests:
"There is a reason for requiring CW which seems to be neglected.
A person with just a little training can convert virtually any old radio into an emergency transmitter."

> The point is simply that when a ham knows how to use CW he has a very flexible
> communications tool which you code haters will never have available.

Use it all you want...but that is NOT the point made above.

Cheers,
Bill K2UNK

Exactly!!

I can at least respect the stateent of someone who says they
have a back-up battery powered CW rig set to go just in case...but
this build it under emergency conditions from an old radio keeps
popping up to entertain us periodically.

Cheers,

These are the number of unexpired FCC ARS licenses held by individuals
on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of July 31, 2002:

Novice - 37,167 (decrease of 12,162)
Tech - 242,877 (increase of 37,483)
Tech Plus - 76,982 (decrease of 51,878)
General - 138,610 (increase of 25,933)
Advanced - 84,916 (decrease of 14,866)
Extra - 102,544 (increase of 23,794)
Total - 683,096 (increase of 8,304)

>>many.
>
>Where do you get that idea? I did not mention motors. PLCs are much more than
>motor controllers. Someone who knew all about "radio and electronics" would
>know that.....

Programmable Logic Controllers (PLCs) are used in industrial
plants, applied as "process control" or control of relatively-high-
power motors, heaters, machinery. There is extremely little
information on their application to radio or to communications.
There may even be none of that.

Show where they are applied to radio or to communications.

>Judging by your behavior on this newsgroup, it must really bother you that I
>have some knowledge, skill and experience in the field of "radio and
>electronics" that you do not have. Poor baby - live with it.

Have you any job references to all that "skill and experience"
to share with the group?

So far you've failed to identify your employer and failed to identify
a general field of work...other than "knowledge and skill" on PLCs.

So far you've failed to identify where PLCs are involved in any
radio or communications application.

>>Have you ever programmed a Microchip PIC?
>
>Sure.

Where, when, and which PIC product or even PIC product
family, and for what application?

>
>Heck, I was doing that stuff in 1972. FORTRAN, BASIC, punched cards, paper
>tape.

You could not possibly program any 6800 series, 6500 series, 8051 family microprocessors in 1972. You might have been able to obtain early parts of the first RCA COSMAC line but COSMAC full micro-processors would have to wait until 1974. They did not get programmed with FORTRAN or BASIC but rather their own program development softwares which could only run on selected, specified platforms.

Intel had CP/M for their first industry-available microprocessor development suites (too expensive for most amateurs to use in their home workshops) which also included the 8-inch diameter floppy disk (the first of the floppies)...and that happened in the late 1970s, not the early part.

BASIC in 1972 was very new and confined to academia where it was born (at a Canadian university). It was really a modified FORTRAN so as to run as an interpreted (some say "tokenized") form rather than be fully compiled to direct machine instructions. The first versions of BASIC were simple subsets of FORTRAN. Academic versions of FORTRAN were relatively simple, old ones whereas industry was using FORTRAN IV ("four") in 1972.

>>Can you do a good flow chart for computer instructions? Those apply
>>equally to microcontrollers. Think of it as the "schematic" for a
>>program. I'm SURE Cecil can after all those years at Intel in digital
>>work (and a few patents).
>
>Been there, done that, freshman year EE stuff.

No doubt you can do 1972-level programming, a la "freshman year" stuff. This is 30 years later and I doubt you can handle any version of C (now the industry standard high-level language), but you can read old student texts, quote them and astound your friends and neighbors who've never programmed.

Have you ever had any program of any kind in large corporate use? Have you had your flow diagrams published in a national magazine? Have you had any computer programs published in national magazines? Have you ever been a member of The ACM?

>What does any of this have to do with the fact that you cannot program a PLC?

PLCs aren't used in radio or communications. I have no idea why you are so adamant on their application knowledge as necessary for radio or communications. Explain why PLCs are necessary for radio or communications.

Show where HRO or any ham radio store/chain carries PLCs for radio or communications applications. You may include Radio Shack in that store/chain.

Define the basic sections of a typical PLC, explain its application.

Explain how PLCs are more necessary in plant control than any 4 to 20 mA transmitter-receiver loop.

>> A couple of quick reality questions...
>>
>> What "old radio" would be used? Rube type? SolidState?
>> What frequency would it transmit on?
>> Who would be the recipient expected to be "listening"?

to answer Bill Sohl's questions -

We could assume two vacuum tube broadcast band receivers
survived the disaster, that 115 VAC power was available, a work
area and hand tools were available, a soldering means was
possible and at least a battery-powered VOM also survived.

For transmit frequency, the common superheterodyne local
oscillator tuning range would be 1005 to 2055 KHz for a 550 to
1600 KHz AM BC receiver having a 455 KHz IF...or 98.7 to
118.7 MHz for an 88 to 108 MHz FM BC receiver. Using the
LO circuit as a driver-VFO for a final made out the audio power
output stage, the LO ranges cover the upper part of the AM BC
band, the upper part of the FM BC band, and a small part of
the civil aviation communications band of 118 to 137 MHz.
Those frequency ranges would be available to other surviving
BC or civil aviation receivers.

As to checking frequency with no test equipment, a second
receiver could act as a wavemeter-like approximate frequency
indicator. The second receiver would be necessary to establish
two-way communications since the first receiver would have
been converted to a transmitter.

The common pentagrid mixer-oscillator of tube type receiver has
very little power output capability of the oscillator. The LO is
coupled through the electron stream and needs very little power.
That could be re-arranged so that the LO was feeding what was
the audio output stage. That stage would have its plate tuned
by the old loopstick or loop and the large tuning capacitor variable

having a series capacitor to move the tuning up to fit the "new"
range of exactly the dial frequency plus the IF. The old audio
output transformer would be disassembled, unwound to get a
thin-wire antenna, too short for AM BC frequency range but long
enough for FM BC range.

This new "PA" stage might have an MF or VHF output anywhere
from 30 mW to maybe 1 Watt depending on the tube type and
ability to achieve an LO to PA input coupling that is near efficient.
[presuming untuned coupling pentagrid to PA input grid with
pentagrid 3rd grid used as on-off keying control] It might not even
run full Class C, more nearly a Class B. Those simple tube
designs had 120 VDC B+ and that is not close to making
efficient amplifiers for more RF output.

So, assuming the conversion went smoothly and rough alignment
of frequencies was possible, a "QRP" rig has been genned up.
It could cover a part of the BC bands which would ensure a higher
probability of listeners/rescuers would be able to hear the
transmitter. The problem now would be in finding someone outside
the disaster area that could decipher morse code sufficiently to
determine the disaster location (assuming it could be identified),
number and condition of survivors and what specialized help would
be needed (medical? first-aid needs? food? shelter?).

>> Preperation for emergency must be done BEFORE such
>> things happen...not after.

Absolutely. That's why there already exist radios which can be
used for emergencies and would, in high probability, survive most
disasters.

> And when things don't go according to plan, just throw up your hands and
>capitulate. If you really believe that all the planning you can do will take
>care of you its because you don't choose to understand your own reality.
>Virtually every HF ham rig made comes ready for use on CW.

There is NO guarantee that any "ham rigs" would survive. There is no
guarantee that ham radio operators knowing morse code would survive.
Carroll does not understand that he cannot specify emergency or
disaster conditions to his desires.

> The point is simply that when a ham knows how to use CW he has a very
>flexible communications tool which you code haters will never have available.

Carroll's point is simply that he cannot abide the thought of a morse code
test ever being dropped by FCC regulations. He cannot argue the subject
point logically, technically, or even emotionally.

>
>The resulting airplane did actually fly. But it crashed and killed famous stunt
>pilot Paul Mantz, who was at the controls. He had come out of retirement to
>make the film.

Incorrect. Paul Mantz was NOT "in retirement." The "reconstructed aircraft" was NOT designed by any model airplane designer...but rather as a one-of-a-kind experimental aircraft built by Tallmantz Aviation then based at Orange County Airport, CA (now renamed "John Wayne Airport"). Mantz was partner with long-time pilot Frank Tallman in this. Tallmantz Aviation had, may still have a "movie museum of the air" where aircraft used, flown by them and aircraft made by the company and used in motion pictures. As an example, Tallmantz made three replicas of the Ryan monoplane for "The Spirit of St. Louis," one of the flying replicas on display at the museum in '64. That one was a near-perfect replica, marred only by a small whip antenna under the cockpit to fulfill modern aircraft communications regulations at tower airports.

The aircraft used in "Flight of the Phoenix" had a skid under the fuselage, a substitute for full landing gear. Mantz was requested to make a low pass over sand dunes for the cameras. He misjudged his height and the skid slammed into a dune top throwing the aircraft out of control. One movie stuntman was aboard, was thrown clear but managed to survive. The accident investigation concluded it was pilot error.

Tallmantz partner Frank Tallman would perish as the only one aboard a single-engine general aviation aircraft attempting to fly IFR in marginal weather in Southern California about a decade later. The accident

investigation concluded it was pilot error.

What male crew member "exposed" himself and how? There was no frontal
nudity of any male in that photograph.

>He sent me the same junk, Steve, even though I did not ask for it. Didn;t
>even bother to download it.

I most certainly did NOT send the "same" thing. Miccolis was sent a file
which was a 300 DPI scan of both sides of my first First Phone license
certificate. No more, no less.

>>>I have sent my file "Attach L 150.ZIP" in private mail again. This will be
>>>the third time the same file has been sent in private.
>
>Why? It's not what was requested.

"Attach L 150.ZIP" is the file name for the reduced resolution scan of my
first First Phone license certificate, reduced from 300 DPI to 150 DPI.

What was requested by the writer was a scan of my first First Phone
license certificate. I sent that. In fact, I have sent that several times
to the requester.

>> Make it 33 if you care to. You gave me more than ample reason to not
>>trust you...again.
>
>C'mon, Steve - did you really think Lenover21 would deliver what you
>requested?

Do you wish a cut-and-paste of the requesting message in public in here?

How do you know what the requester received?

She did not open the file. She is afraid to open the file.

I have sent the requester a total of four copies of my first First Phone
license certificate.

If she cannot or will not receive what she requested, why does she
continue to complain?

>> Too bad AOL doesn't enforce what they preach very well. I am sure a
>>copy of your post offering your license and then followed by a picture of a
B-26
>>with an "exposed" crewman certainly violates TOS.

The requester is requested to show the received file to any AOL representative
for any purpose. The picture of the airborne converted B-26 was received
through AOL private mail, a forwarded attachment which included many AOL
and non-AOL users.

I will send my scan of my first First Phone license certificate to anyone for
confirmation of its contents. I have no problem with that whatsoever.

If someone is so pussy they don't dare open it, that's their problem.

They can continue to act like old women or mad men who cannot take it,
shouting about "indecencies" all they want but those are still old women
or mad men of big mouths and infinitely-small souls shouting in the wind.

>Don't forget the "avian greeting".

That file is in PowerPoint Presentation format. It cannot be viewed without
a PowerPoint Reader or PowerPoint software. The PowerPoint Reader is
free for download from PowerPoint.

That PPS-format file contains a full-screen image of an emu (an ostrich-
like non-flying bird found inhabiting crossword puzzles). A balloon caption
floats up carrying the greeting text "have a nice day." There is no frontal
or rear nudity of the emu below the neck.

Have a nice day.

Forgive him, Brian. He gets all his "military information" from old movies on AMC and from the pages of QST or Electric Radio...or geriatric survivors of the 1960s "hell, no, we won't go" draft-dodging period.

He can program a PLC so he is a master of radio and communication. No problem.

Where was the "proof" of ARRL's inherent honesty? No one saw a thing.
All that was presented were ARRL claims.

>Fortunately, the more you natter on, the more foolish you make yourself
>look.

The more the repeated character assassinations are made, the more they
look like personal attacks.

If this is an example of "ARRL help" or caring from $75K+ annual salary
ARRL managers, there is no wonder that US amateur radio licensees
who are not ARRL members outnumber members by over 3 to 1. QED.

Contrary to "popular legend" neither "Da Rools" nor the document
itself require that a licensee keep the Amateur Radio License
documrent either on their person, on file somewhere or, as it used
to require, "posted in a prominent place at the operating location".

The document is merely tangible proof that the license exists. If
you don't need to prove that you are licensed, you don't have to
show anyone "no steenken' licenses".

That's it. There's no rule that requires retention of current,
expired or cancelled licenses.

Retentives such as myself do keep them forever, though.

>the amateur service. There is nothing in the amateur service rules
>that says that stations/people licensed in the service need not keep
>any sort of records.

That's trying to prove a negative.

Actually the phrase "station records" appears twice in Part 97 -
in connection with the licensee designating another amateur
operator as the control operator, and again in a requirement to make
the station and the station records avaiialble for inspection. The
only other place that the phrase "station records" appears as
applicable to amateur service licensees is in Part 1 (Rules of
Practice and Procedure) where the process of submitting station logs
and records to the Commission is detailed.

Contrary to other radio services where there are rule definitions
and requirements about the contents of "station records", no such
list of documents/records is specified for the amateur service.

There's a whole bunch of stuff that I would recommend keeping but
none are required by rule.

>Because expired-term licenses are part of the "station records" that
>they are supposed to keep.

Mot so - see above and my prior post on this subject.

Actually, Part 1 as it applies to all licensees specifies
retention of required records and logs for one year beyond the
license period unless specified otherwise in the rule parts
pertaining to specific services.

The only exception is in connection with matters under adjudication.

Perhaps they need to shrink wrap the radios with a big warning notice that by opening the package they agree to the following (somewhat like Microsoft Winblows does). The notice would be that by opening the package they state they have read the enclosed (outside the wrapper) FCC rules concerning the use of the radio. At this point, they might be a little harder pressed to offer that they "didn't know" and simply purchased the radio from a dealer. Omitting the 'peak and tune', any of the radios could be sold to anyone. The vendor is not responsible. As to the peak and tune, well, that's another story. Another possibility is forcing automatic computerized registry with the FCC for any transmitter. Anyone can buy it (perhaps one is working for an amateur license), but YOUR electronic fingerprints are all over it.

The fact that element 1 credit can be granted for even an expired novice license for someone who doesn't have a current license isn't good enough for you?

That is obviously an expectation by the FCC that keeping such records is a requirement even if it lacks the budgetary resources to otherwise enforce it.

What constitutes "station records" may not be defined by regulation, but as I noted, there is a requirement to keep such undefined records. Why is there no reasonable expectation that such a vague defintion wouldn't include licenses (past and present), even without a statutory definition?

Dropping the code tests is OK but we need soldering operations tests.
Gotta love it. When do you suppose the Dumb Down Coalition will
propose test questions on finding the power switch and volume controls
on ham xcvrs?

>dumbed down ham as well.

JJ:

That's right. Compared to someone who became a ham who had
to answer essay questions and draw diagrams, in addition to taking
a 20 WPM code test for the Amateur Extra, I'm "dumbed-down."
And 100% of the Post No-code Tech/Post-Restructuring hams are
dumbed-down compared to me. The difference between me and the
"dumbed down" hams of today is simple. While I, in my pre-ham
years, made many complaints about the necessity for code testing,
I never accused anyone of "ethnic cleansing," or anything similar to it,
for supporting the concept. When you listen to today's generation
of ham wannabes, the bitter whining about the code is a prevalent,
recurring theme. The simple fact is that if these people expended
as much energy in learning the code as they do in expressing their
distaste for it and for those who have been able to master the code
testing requirements, they would have been Extra-class many years
ago. Now they are permanently consigned to underclass status with
no way of redeeming themselves.

I had no choice when it came to being tested with essay questions
and circuit diagrams. That was before my time, literally. However, I
grew up and became a ham in time to beat the reduced code/VE-testing/
question pool/rote-memorized answer rap. Today's hams are "dumbed
down" to a much greater extent than myself or those who came in during
my time -- and will always bear the opprobrium they deserve because of
their choice to lobby for reduced licensing standards, or merely wait
until they came about.

Kim:

It's all a matter of what they are doing in ham radio *after* taking advantage
of the existing licensing system. If they are in here whining about my
"attitude," then they are going to get slam-dunked in my inimitable style.
If they are out there working to win the Brendan Trophy, then they're not
going to draw my fire. It's as simple as that.

>73 de Jim, N2EY.

Jim:

The concept of building a functional transmitter out of a Sony Walkman notwithstanding, it is highly possible, in a disaster scenario, that a ham radio operator could cobble together a functional station, but be faced with severely limited power sources. What is the best way to utilize his available electrical power? Running his ICOM 706 at full power on 75-meter SSB, or running it at 5 W on CW? By doing the latter, I can keep my rig going from my car battery one heck of a lot longer. Even using 25 - 50 watts, I can keep operating a lot longer -- perhaps long enough to actually make contact with someone outside the disaster area. Of course, if knowledge of CW goes by the boards due to the reduction/elimination of code testing, then the best I can do is turn my power up full and scream bloody murder into my mike, and hope for the best.

The question posed by this thread is simple: Is there a Need to know the Morse code? I say yes, absolutely. For without this knowledge, we have no way to exploit one of the most practical, effective, efficient, and universal communications modes available to radio amateurs. This truth will never change.

Jim:

It is my understanding that Mantz was called in only to direct the aerial sequences, but insisted on doing the flying for the aerial sequences of "The Phoenix" as well -- and promptly proceeded to prang the plane. The takeoff sequence shown in the film is actually Mantz's last flight -- the crash was caught on film, but, of course, was edited out of the final film for release. I remember seeing a TV news story about the accident, showing the crash.

Lennie:

Exactly. Now, why would that be, praytell? Could it have something to do with the reduction and eventual elimination of Morse code testing as a licensing requirement?

>There is no guarantee that survivors would include other
>radio amateurs or any pre-disaster radio specialist with

What part of "there is no rule requirment to keep current, expired
or cancelled licenses in the station records" is not clear to you?

I don't know what Federal agencies you hang around with, but in FCC
practice if one is not required to do something by rule or statute,
one cannot be penalized for not doing it.

Look at various other FCC Rule Parts to see what other service
licensees must keep as "station records". At one time there was a
whole bunch of items required for amateur radio service licensees
as well, including logs for fixed and mobile operation and detailed
engineering studies for repeater and remote base stations.

Be very thankful that the Commish' in a stroke of wisdom abolished
all that before many of the folks here were licensed.

Don't look for complications where it's not necessary.

If there is no spec on what station records are to contain, then what
records are there that an inspector can expect to inspect? Though
I suppose the inspector is more likely interested in illegal freeband
radios and such. I doubt inspectors go on fishing expeditions much.
There's enough idiots causing trouble to keep them busy.

Well, I gotta agree with you there (did I really say that?). I did
not want to learn Morse code but I knew I had to if I wanted the
license. So I did it without complaint and actually had fun doing
it, just never really enjoyed working code on the air so when I
upgraded from Novice to General I put away the key. I really can't
sympathize with those who complain that the code test is too hard,
outdated, or whatever. The fact is, it is required, so if you want
the license, the either do it or find another hobby.

And today the current prospective ham doesn't have a choice
either, so would you rather they not become hams so we don't have
these "dumbed down" hams on the air? What if the older generation
of hams who took the much harder essay tests said that about us
who came later? If you were deciding today to get a ham license
would you refuse to do so because the tests are much easier now?

Do you REALLY enjoy embarrassing yourself in public, Oh Putzy One?

The "reconstructed aircraft" WAS "The Phoenix", Lennie.

MAYBE if you had watched the movie, you'd know what we were talking about.

And IN the movie, one of the characters, a German fellow whose name
escapes me, develops a plan to rebuild part of the crashed twin engine plane
into a single engine plane.

During the course of the story, it's found out that he's not a "real"
aircraft engineer...He designs model aircraft.

Just ONE MORE glaring bit of evidence of what a stupid, demaning and
arrogant PUTZ you reallya re.

Sheeeeeesh.......

>kind experimental aircraft built by Tallmantz Aviation then based at Orange
>County Airport, CA (now renamed "John Wayne Airport").

Lennie, why don't you just keep your mouth shut about stuff you OBVIOUSLY have NO clue about?

The "reconstructed aircraft", Mr Engineer, WAS the featured aircraft in the storyline.

Did you even watch the movie?

One of the passengers, allegedly an "aeronautical engineer", convinces the survivors of an aircraft crash in the Libyan desert to cannibalize the wreckage of the C-119-like cargo plane into a single engine one with which to escape.

During the course of the storyline, it's determined that he (the alleged engineer...much like you) only designs MODEL aircraft.

This post of yours, Lennie, was just one more GLARING example of your overbearing desire to try and show off your "superior intellect"...Another USENET "King Of The Hill" attempt on your part.

It failed...miserably.

Too bad that you FAILED to read AND COMPREHEND the post you cited. If you had, you MIGHT had gotten the gist of what was being said. Instead you jumped in with "finger's-a-blazin" in yet one more "Wait Till I Show Them" effort.

A REAL engineer would have known better.

Guess that says it all...Thanks for the laughs!

PUTZ!

>What male crew member "exposed" himself and how? There was no frontal
>nudity of any male in that photograph.

Exposing one's self need not include "frontal" nudity, Your
Putziness....And yet another lie to your growing archive.

>I most certainly did NOT send the "same" thing. Miccolis was sent a file
>which was a 300 DPI scan of both sides of my first First Phone license
>certificate. No more, no less.

For someone who allegedly didn't get it, he certainly knows a lot about it,
Lennie.

>What was requested by the writer was a scan of my first First Phone
>license certificate. I sent that. In fact, I have sent that several times
>to the requester.

You very well MAY have...And I repeat that you have no more trust here,
Lennie.

I took a leap of faith opening the first one. Appears I leaped into a
drained pool.

Won't happen again.

>Do you wish a cut-and-paste of the requesting message in public in here?

Go ahead. I will re-paste your offer to provide your LICENSE to anyone who
asked for it. I will then post, with headers, what I got. You can then try to
spin your way out of THAT one.

>She did not open the file. She is afraid to open the file.

"She" opened the first one. YOU lied about it's content. Again...it
won't happen again. You only proved what I ahve been saying all along.
Thanks.

>I have sent the requester a total of four copies of my first First Phone
>license certificate.

You MAY have sent three. The first file was NOT your license.

>If she cannot or will not receive what she requested, why does she
>continue to complain?

No complaints here, Lennie. Only regrets that I allowed myelf to think
you were trustworty. Shame on me for that one.

>If someone is so pussy they don't dare open it, that's their problem.

Well, I guess that pretty well sums up what Lennie's all about.

>They can continue to act like old women or mad men who cannot take it,
>shouting about "indecencies" all they want but those are still old women
>or mad men of big mouths and infinitely-small souls shouting in the wind.

Spin, Lennie, Spin. You look more and more foolish with every attempt to
cover up your lies and misdeeds. you really do.

>That file is in PowerPoint Presentation format. It cannot be viewed without
>a PowerPoint Reader or PowerPoint software. The PowerPoint Reader is
>free for download from PowerPoint.

Obviously SOMEONE could read it, eh Lennie? How'd he know what it was
without "viewing" it?

>Have a nice day.

I gues when you are as deluded as you are, it's easy to always have a nice
day...One need not be bothered by reality.

Sucks to be you, I guess.

I saw it - what a a classic!

Readers Digest would call it, "Humor in Uniform."

Maybe Len's mistake was in not sending it out in large print.

It doesn't have to be commercial kit, it just has to conform to EC requirements. As far as I know, there's no harmonised standards for amateur equipment, so I believe it just has to be EMC and, if applicable, low voltage specs.

As I understand it, any item which has no intrinsic functionality does not require EC conformity. An external amplifier module which does nothing in isolation (no exciter, no PSU) has no intrinsic functionality. Build a mW exciter, easy to ensure and check it meets EC regs, then have an external PA with separate PSU and you can argue that you're meeting the licence requirements.

Steve.

Thanks Phil,

Can you address the claim that some have made which
argues that station (operating) logs must also be kept even though Part 97
rules
no longer require logs.

Cheers,
Bill K2UNK

Nope....because it isn't a legal requirement. The decision to retain is
only the result of the individual wanting to hold on for future proof.
Worst case, the person has no proof for Element 1 credit...which is
no legal violation.

> That is obviously an expectation by the FCC that keeping such records is a
> requirement even if it lacks the budgetary resources to otherwise enforce
it.

Yet you can't offer any specifics as to keeping any such
records except where it is driven by personal choice.
Other than the physical installation I maintain NO

record of my home station and/or any mobile or portable operations
I have engaged in. What law(s) am I breaking?

Cheers,
Bill K2UNK

Exactly!

Bottom line, no station records specified, then none "required"
much less retained.

Phil answered this in another post. In a nutshell,
there are NO specific records required for amy station
licensed under Part 97.

> I suppose the inspector is more likely interested in illegal freeband
> radios and such. I doubt inspectors go on fishing expeditions much.
> There's enough idiots causing trouble to keep them busy.

Agreed.

Surely you can figure this one out. They've wasted time, effort, QSL
cards, postage and envelopes to obtain a card which is good for nothing.

As I've stated, I don't need T5. Many others do. I can see how they'd
have to be patient after working a bootlegger whose QSO's don't count
toward DXCC. So much for your oft-proclaimed ethics and morality. I
think I see more than a bit of a double standard. Isn't that the term
you keep using?

Dave, wake up! I QSL 100%. I was there, I operated, I QSLd. They have
confirmation of the very contact they had with me. No Hoax. Perhaps you
should take your problems up with the DXCC desk.

Dave, no double standard. Its hard to so something illegal where there are no civil laws. I was there under orders, and I obtained permission from my superiors to operate. Get over it.

Amateur Radio Newsline™ Report 1303 August 2nd, 2002

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the website front page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1303 with a release date of Friday, August 2nd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio may be headed to Mars. That’s right. We said the red planet Mars! Find out how on Amateur Radio Newsline report number 1303 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: WE ARE GOING TO MARS

Ham radio could be headed to the Red Planet in a few years. This as the German ham radio space agency announces some ambitious plans for future Amateur Radio operations from outside the Earth’s atmosphere. CQ Magazine Editor Rich Moseson, W2VU has the details:

--

AMSAT-DL the German amateur radio satellite organization has announced plans to build two new amateur spacecraft, including one destined for orbit around Mars! Now, the AMSAT News Service, says that the so-called Phase 5-A satellite could be launched in the 2007 to 2009 timeframe and that it will include subpayloads that would be launched from the main satellite,

either to the planet's surface or into the Martian atmosphere.

These devices would transmit scientific data back to the "mother ship." It would then use a repeater to relay the information back to hams on Earth. AMSAT-DL officials say that the 2000 launch of AMSAT-OSCAR 40 showed that the basic satellite design was capable of a trip to Mars.

The AMSAT-DL board of directors has also given a green light to developing a Phase 3-E earth-orbiting satellite. This would be a more traditional amateur bird, offering two-way communication links on amateur bands between 145 MHz and 10 GHz. In addition, it will serve as a testbed for some of the technology needed for the Mars mission.

AMSAT-DL has been the lead AMSAT group on the past three large amateur satellites placed into orbit. This includes AMSAT-OSCAR-10 which is still operating, AMSAT-OSCAR-13 which is no longer in orbit and AMSAT-OSCAR-40.

For the Amateur Radio Newsline, I’m Rich Moseson, W2VU.

--

No launch timetable has been announced for Phase 3 E, but it is expected to be several years before the anticipated launch of the mission to Mars.

information about both missions can be found at:
http://www.amsat-dl.org/p3e/towards-p3e.pdf and
http://www.amsat-dl.org/p5a/p5a-to-mars.pdf (ANS, CQ)

**

RESCUE RADIO: JULY 4th WATER RESCUE ACCOMPLISHED THROUGH HAM RADIO

Its ham radio to the rescue on Thursday, July 4th. This following a water accident involving a teenage girl on Utah’s Lake Powell. Roy Neal, K6DUE has the details:

--

STEVE WILLIAMS, K0SRW, REPORTS THAT A TEENAGER . WHO SHALL HERE GO UNNAMED BECAUSE OF HER AGE, WAS RIDING A TUBE BEHIND A RENTED SKI BOAT. THEY WERE GOING FAST UNTIL SHE HIT A WAVE AND SUDDENLY…UNEXPECTEDLY…WENT AIRBORNE. THAT’S USUALLY LOTS OF FUN FOR KIDS BUT THIS TIME THE YOUNG GIRL LANDED THE WRONG WAY. HER NECK HURT. SHE COULD HARDLY MOVE HER NECK AND BACK.

WILLIAMS WANTED TO CALL FOR HELP BUT THE ACCIDENT TOOK PLACE ON LAKE POWELL, WHICH IS A HUGE PLACE…186 MILES LONG WITH ALMOST 2 THOUSAND MILES OF SHORELINE. MAJOR CANYONS, 96 OF THEM, SOME 15 TO 20 MILES LONG, RISE UP BEHIND THE SHORE.

A MARINE RADIO CAME WITH THE HOUSEBOAT THAT WILLIAMS RENTED BUT THEY WERE TOO FAR OUT TO MAKE CONTACT. CELLULAR TELEPHONES ARE ALMOST NON EXISTENT IN THE TERRITORY. SO K0SRW TURNED TO HAM RADIO. WILLIAMS HAD A YAESU 900 AND OUTBACKER ANTENNA ALREADY SET UP. ON 20 METERS, HE HEARD W8VRT, LEN KERSCH, IN ANN ARBOR, MICHIGAN, SEVERAL HUNDRED MILES AWAY.

KERSCH WAS TAKING PART IN A NET, ON 14.178 Mhz. WILLIAMS BROKE IN, EXPLAINED THE SITUATION AND GAVE A PHONE NUMBER FOR THE BULLFROG MARINA, AT LAKE POWELL. KERSH CALLED THE MARINA. THEY CONNECTED HIM WITH THE NATIONAL PARK SERVICE. ANOTHER WILLIAMS…KARL WILLIAMS, KD5AW, IN OKLAHOMA CITY BROKE IN TO ASSIST BY RELAYING INFORMATION BETWEEN W8VRT AND K0SRW.

ABOUT 25 MINUTES AFTER THE INITIAL CONTACT, A MEDICAL HELICOPTER AND A NATIONAL PARK SERVICE BOAT ARRIVED. THEY DECIDED TO AIRLIFT THE GIRL BY HELICOPTER TO A HOSPITAL AT GRAND JUNCTION, COLORADO. STRANGE TO RELATE, THE PILOT ALSO WAS A HAM…TOM CALDWELL, KC7BPK, WAS AT THE CONTROLS.

THERE WAS NO ROOM FOR THE PARENTS IN THE HELICOPTER. THEY TOOK OFF TO TRAVEL SOME 4 HOURS BY BOAT AND CAR. AS THEY DROVE AND GOT BACK INTO CELL PHONE RANGE, GOOD NEWS WAS WAITING FOR THE ANXIOUS PARENTS. X-RAYS SHOWED THEIR DAUGHTER WAS NORMAL…NO PERMANENT INJURIES. THIS HAM RADIO RESCUE STORY HAD A HAPPY ENDING.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

Williams says he is grateful to all of the hams who assisted in the rescue. Because of them an injured youngster quickly received medical aid in a rather remote part of the USA. (K0SRW)

**

RESCUE RADIO: HAMS READY FOR WASHINGTON TRAIN DERAILMENT

Ham radio was ready but not really needed at a July 29th train derailment just outside of Washington D-C. An AMTRAK liner was enroute from Chicago to Washington when many of the passenger cars left the track near Kensington, Maryland. About 90 people were taken to area hospitals, three reported in critical condition. One news report said that a ham radio communications team was on its way to supply assistance but with no real communications failure, their services were found to be unnecessary. The news story did not mention anyone by name or call sign. (ARNewsline™ from news reports)

**

RADIO LAW: QCWA FILES IN FAVOR OF NEW HAM BANDS BUT SOME MEMBERS SAY THEY SHOULD HAVE BEEN ASKED

The Quarter Century Wireless Association has filed in favor of the ARRL proposal to create new ham radio bands. While most members of the QCWA appear to agree with the FCC filing, there is one group that is taking the Board of Directors to task over how it was done.

Its not because they disagree with the content. Rather, calling themselves the “vocal minority,” these hams are using the QCWA electronic remailer to complain that the board did not send paper or electronic copies of the proposed filing to all members. Also, they say that the board did not individually poll the members for their opinions before writing the QCWA position and sending the paperwork to the FCC.

But outgoing QCWA President Gary Harrison, K0BC, says that the reason it was done this way is simple. It was a matter of time.

In a posting to the QCWA Reflector, Harrison says that there was a limited amount of time to file comments. He also notes that there are only about 300 QCWA members are on the groups electronic mail list. That would mean preparing a paper mailing, sending it out and waiting for members to write back.

Harrison uses QCWA election figures as an example. He says that it takes about two years to complete an election cycle and the organization receives only about 30% return of the ballot. The cost of mailing material out for this election is about $2,000.

What about the organization's magazine called the QCWA Journal? Harrison says that it takes two months to prepare and mail it from the deadline for submitting articles. And be it a paper ballot or an announcement in the Journal, the QCWA would have to allow several months to permit input from the membership. In this case waiting would mean that the QCWA could not file because the commentary cutoff date had passed. (ARNewsline™)

CHANGING OF THE GUARD: STEVE MANSFIELD, N1MZA – S.K.

Some rather sad news to report – especially for us here at Newsline. It comes in word from the American Radio Relay League that its Legislative and Public Affairs Manager Steve Mansfield, N1MZA, has died of complications to brain cancer at age 55.

Steve Mansfield came to ARRL service in 1991 as an expert in the area of Public Relations. It did not take long for his bosses at League headquarters to realize his enormous potential as a people person. As a result, the hallowed halls of Washington D.C. soon became his beat and he spent the next eleven years as the point man between the ARRL and numerous political leaders.

ARRL President Emeritus George Wilson, W4OYI, had the opportunity to work with Mansfield. He tells Amateur Radio Newsline that he recalls one incident just before a major convention out in California. There were a lot of very controversial issues on which the League had taken considerable heat. Wilson gave Mansfield the job of searching out all issues and prepare a short "position paper" on each for W4OYI. The former ARRL president says that Mansfield did such an outstanding job that he had copies sent to all Directors and Vice Directors. The result was what

President Wilson called tons of favorable comments, and a real tribute to the dedication of N1MZA.

Mansfield was also seen at many hamfests and conventions. In most cases speaking at public relations sessions hosted either by the ARRL or by us here at Newsline. And that's really where we got to know him as a friend, a college and as an expert in the topic of relating to other people.

Steve Mansfield was first diagnosed with brain cancer in 2000 and had surgery to remove the malignancy. He was doing well until recently when he suffered a series of setbacks. He passed away on Monday July 29th. He is survived by his wife Ellyn daughters Ramona and Elizabeth and the friends he made in and out of ham radio, worldwide. (ARRL, W4OYI, ARNewsline™)

**

CHANGING OF THE GUARD: FATHER MIKE MULLEN, WB2GQW – S.K.

The Reverend Michael Mullen, WB2GQW, a past winner of the ARRL International Humanitarian Award, became a Silent Key in June. "Father Mike" was a professor and past chairman of the humanities department at St. John's University in New York. He was best known in amateur radio for his involvement with IMRA, the International Mission Radio Association. IMRA maintaines lines of communication using amateur radio for missionaries. It also inter-connects various humanitarian agencies over the air after disasters.

According to the New York Daily News, in addition to his ARRL International Humanitarian Award, Father Mike received the St. John's University Presidential Medal and was listed in the
international edition of "Who's Who in Education." He was 87 at the time
of
his death. (CQ, NY Daily News)

NAMES IN THE NEWS: A NEW BOOK BY N6NHG

Former computer hacker Kevin Mitnick, N6NHG, has turned author. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

Kevin Mitnick, N6NHG, Mitnick is the California ham whose license renewal application has been designated for hearing by the FCC. This, based on his conviction for hacking. And now according to news reports, he has written a soon to be released book on computer hacking and -- more important -- how to prevent being hacked.

According to the reports, Mitnick's book -- The Art of Deception -- is a novel that describes more than a dozen scenarios where hackers dupe computer network administrators into divulging passwords, encryption keys and other security details. Mitnick claims that its all fiction with any personal details having been kept out of the book which reportedly uses

fictitious names of hackers, victims and companies.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

Earlier this year the FCC designated his application to renew his Amateur licenses for a public hearing. The FCC contends that Mitnick may no longer possess the requisite requirements to remain a Commission licensee. (Published reports)

CONVENTIONS: HUNTSVILLE HAMFEST

Two conventions on almost opposite sides of the country are taking place the weekend of the 17th and 18th of August. In Huntsville Alabama, the Huntsville Hamfest takes place at the Von Braun Center's South Hall right across the street from the Huntsville Hilton Hotel. Since the first Huntsville Hamfest in 1981, this event has grown to the point where the Amateur Radio manufacturers and dealers consider it to be one of the seven major hamfests in the country, pulling a gate of between 5000 to 6000 every year.

We at Amateur Radio Newsline have presented our own Young Ham of the Year Award at the Huntsville Hamfest since 1993. 2002 is no exception. So please join us at 2:00 P.M. Central time on Saturday August 17th as we, our corporate underwriters Vertex Standard and CQ Magazine along with the people of Huntsville honor 17 year of Josh Abramowicz, KB3GWY as the 2002 Amateur Radio Newsline Young Ham of the Year. More information about the Huntsville Hamfest is in cyberspace at www.hamfest.org. (Huntsville Hamfest)

**

CONVENTIONS: ARRL SW DIVISION IN SAN DIEGO

And August 16th to the 18th will se the ARRL Southwestern Division show at the California Center of the Arts in Escondido. The scheduled Banquet speaker will be Riley Hollingsworth K4ZDH. Also on hand will be ARRL President Jim Haynie W5JBP, Big Project Coordinator Jerry Hill, along with Division Director Art Goddard W6XD, and Vice Director Tuck Miller NZ6T. More information is on the convention web site at http://sd2002.hamcon.net. (HAM-CON)

**

CONVENTIONS: HUNTINGTON HAMFEST

And a week earlier on August 10th, the Tri State Amateur Radio Association will host the Huntington, West Virginia Hamfest. Its at the Veterans Memorial Field House, 2590 Fifth Avenue in Huntington from 8:30 AM to 2:30 P-M. Talk in on the 146.76 repeater and V-E administered ham radio exams will also be available. For further information contact Phil Beckett by e-mail- to ab8me@hotmail.com (N8TMW)

HAMFESTS: TRW SWAP MEET FOR SEPTEMBER CANCELED

If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month. This is because the giant swap-feast has been canceled because a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only September is canceled. There will be a TRW Swap Meet the last Saturday of the month in August and in October, November and December.

The TRW Swap Meet is famous and draws attendance from across the nation. For more information visit http://w6trw.com on the world wide web. (Via e-mail from TRW A.R.C.)

**

SCIENCE PAGE: THE MAGNETIC NORTH POLE IS ON THE MOVE

The Magnetic North Pole could soon abandon Canada, migrate north of Alaska and eventually wind up in Russia. So says one scientist. Amateur Radio Newsline's Bill Pasternak, WA6ITF, reports on the future of the pole.

--

The e-newsletter Science Today tells of Larry Newitt. Newitt is a researcher with the Geological Survey of Canada. And Newitt says that the magnetic pole is on the move.

The researcher says that the pole, which has steadily drifted for decades, has picked up speed in recent years. He says that at its current speed, it could exit Canadian territory as soon as 2004. And, says Newitt, if the pole follows its present course, it will pass north of Alaska and arrive in Siberia in a half century.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, Los Angeles.

--

If you are worried that you may soon have to trade in your old compass for a G-P-S to know where you are, don't. Researcher Newitt cautions that such predictions could be wrong. (Science Today)

**

INTERNATIONAL - BRAZIL: A NEW LF BAND ON ITS WAY

According to Brazilian amateur PY3CRX the Brazilian licensing authority, ANATEL, has agreed that the 135.7 to 137.8kHz band can be allocated to radio amateurs in that nation on a secondary basis. No date was mentioned for the new band's introduction but PY3CRX adds that the band is, or will be, also available in Paraguay and Uruguay as well. (GB2RS)

**

INTERNATIONAL- CANADA: VY2BP NEW RAC AD

Radio Amateurs of Canada reports that Bill Perry, VY2BP, has been appointed as an Assistant Director for the R-A-C Atlantic Region. Perry will complete the unexpired term of Fred Burke, VY2FB, who recently resigned the position because of family commitments. (RAC)

**

INTERNATIONAL EAST TIMOR: NEW CALL SIGN BLOCK ANNOUNCED

The International Telecommunications Union says that the 4WA to 4WZ prefix block will go to the United Nations Territory Administration of East Timor for as long as it exists. United Nations stations within East Timor will be assigned 4U prefixes. The official U N Club station will get 4U1ET. All other amateurs will use the 4W6 prefix. Those residing in East Timor less than one year will sign 4W6 followed by their home call. People staying beyond one year will be assigned a permanent 4W6 call. And yes, CEPT licenses are accepted. (GB2RS, Q-News)

**

DX

In D-X, the UK-lead youngsters' DXpedition to the Maldives should be on the air as 8Q7ZZ until the 11th of August. The expedition is being lead by 18-year old Mark Haynes, M0DXR. Other operators include 15-year old Robert Morgan, M0TTT, as well as young amateurs from Germany and Spain. 8Q7ZZ will be running up to three stations simultaneously, all with beam antennas and up to 400 watts power out. (RSGB)

Meantime, four French operators are in Benin and active as TY7Z, TY9F, TY4DX and TY6FB until the 14th of August. If you make contact with either operation Q-S-L as directed on the air. (QRZ DX)

**

THAT FINAL ITEM: A SPECIAL HAM RADIO PRESENTATION

And finally this week:
--
“Good afternoon to everybody here. We have a lot of Amateur Radio operators and we have a lot of guests aboard the Queen Mary. And we are here for a very short ceremony to commemorate the 23rd anniversary of W6RO.”

--

That was Bob Heil, K9EID, on Saturday, July 27th, talking to a crowd assembled in the Wireless Museum next door to the Queen Mary's radio room. A radio room that for the past 23 years has been the home of Amateur Radio Station W6RO. And to commemorate this milestone, Bob's company, Heil Sound, donated a half dozen custom made Classic series microphones adorned with the W6RO call sign to the station. These retro look microphones are very similar to the RCA studio mic's of the 1930's. Famed rock musician Joe Walsh, WB6ACU, had the honor of making the actual presentation:

--

Joe Walsh: "These Classic microphones are presented to the Queen Mary amateur Radio Station, W6RO, celebrating the 23rd year of continuous operation provided by the Associated Radio Amateurs of Long Beach California, present by Bob Heil, K9EID, and Joe Walsh, WB6ACU, on July 27, 2002. And we wish you continued success with the station and here you go."

Nate Brigtman: "Thank you very much."

--

Accepting the mics was Nate Brightman, K6OSC, who was the man who conceived the idea of a ham station on the Queen Mary. He was accompanied b the current president of the club, Ray Rittenhouse, KF6WZN. Rittenhouse has a surprise for K9EID:

--
Ray Rittenhouse: "We appreciate this very much Bob, and from our club to you is a certificate of our appreciation thanking you for those microphones we are now putting in W6RO"
--

Then it was Nate Brightman's turn. He told the crowd a bit about the operation of W-6-R-O, and what those who sit at the transmitters get as a token of appreciation for taking the time to operate:

--
Brightman here: ""Those amateurs who come by to visit W6RO aboard the Queen Mary, should they operate the station, we will mail to them a special certificate designating that they had the honor of operating W6RO aboard the Queen Mary."
--

And when it was all over Bob Heil ended the presentation with a bit of a poem:

--
Heil: Nate. Thanks for having us today. And Ray, we appreciate all of your efforts for the club. And we will be seeing you a little high, a little low. But we'll find you somewhere from W6RO. (Applause)
--

Attending the ceremony, were numerous local ham radio operators from the Los Angeles area. This included Vertex-Standard's Chip Margelli, K7JA and film maker Dave Bell W6AQ. The ARRL was represented by Los Angeles Section Manager Phineas Icenbice, W6BF. You can hear the complete presentation as

this weeks Newsline Extra. You will find it as an MP3 file on our F-T-P page only a click away at www.arnewsline.org. (ARNewsline™)

Hello.................NG.
Can anyone tell me as little bit about ...
Motorola FMTR 80V (BX) 1D..&.. FMTR 80-12D (DW) 1A.radios...
Apparently use by a Sheriffs dept...
These appear to be Trunk mounted transmitters & recievers...?
Does anyone have a use for these?...Are they legal to use (or sell)..?
Any idea of value....?
Pix available....
Thanks...

Especially if the workbench is scattered over that same 1/2-mile radius.
I've often wondered - how would one know that his CW transmitter was
working without any other electronics around? Stick one's tongue to the
output? Enjoyed the communion at Tuthill, Ed.

I know a lot of hams who are very proficient in cw, but in a
disaster they would be challenged to make a flashlight work, much
less cobble together a transmitter from parts.

Sounds like a familiar excuse. It appears that you obtained permission
from one who had no authority to grant it. You should have asked
earlier, Brian. I'd have been happy to grant you authority to operate
from Somalia. I hereby give you permission to operate from Mount Athos.
Tell 'em I said it was okay.

Dave K8MN

So, are you in fact saying that although there is a requirement to keep "station records" but since the term itself is undefined with respect to the amateur service, that it is a complete nullity?

What is wrong with the common sense approach that such a requirement would clearly include a license history and correspondence from the agency?

(Oh, I forgot; You're a lawyer, and common sense and the law never work together!) :-)

> I don't know what Federal agencies you hang around with, but in FCC

But the issue is whether or not there is a requirement. One regulation says that there is, but by omission of a subsequent regulation, there is nothing defined for the first regulation to apply to.

They might have excluded those specific items, but they did not abolish the general requirement. In the absence of a regulation stating that stations (or licensees) in the amateur service need not maintain ANY "station records," the requirement to maintain "something" remains. Something usually does not mean nothing.

Pages 1--2 from Microsoft Word - 20272.doc
Federal Communications Commission DA 02- 1834
Before the Federal Communications Commission
Washington, D. C. 20554

In the Matter of) File No.: EB- 01- TP- 399)
Joseph S. McCreary) NAL/ Acct. No. 200232700006)
Pensacola, Florida) FRN 0006- 9319- 84

FORFEITURE ORDER
Adopted: July 29, 2002 Released: August 1, 2002
By the Chief, Enforcement Bureau:
1. In this Forfeiture Order (" Order"), we issue a monetary forfeiture in the amount of five thousand dollars ($ 5, 000) to Joseph S. McCreary for willful violation of Section 95. 411 of the
Commission's Rules (" the Rules"). 1 The noted violation involves Mr. McCreary's usage of an external radio frequency power amplifier as part of his Citizens Band Radio station.

2. On May 7, 2002, the District Director of the Commission's Tampa, Florida Field Office issued a Notice of Apparent Liability for Forfeiture (" NAL") 2 in the amount of $5,000 to Mr. McCreary.
Mr. McCreary has not filed a response to the NAL. Based on the information before us, we affirm the forfeiture.

3. ACCORDINGLY, IT IS ORDERED THAT, pursuant to Section 503(b) of the Communications Act of 1934, as amended (" the Act"), 3 and Sections 0.111, 0.311 and 1.80(f)(4) of the
Rules, 4 Mr. McCreary IS LIABLE FOR A MONETARY FORFEITURE in the amount of $5,000 for willfully violating Section 95.411 of the Rules.

By jove, I think he's got it.

> What is wrong with the common sense approach that such a requirement would

If that works for you, then do it. Others, like myself,
need not worry as no one has ever been prosecuted for
violating "common sense."

> (Oh, I forgot; You're a lawyer, and common sense and the law never work
> together!) :-)

Cute, but the reality is that it takes a defined law in order to
legally require anything.

Yes, the general requirement (not in Part 97) is that records
must be kept...but ihen one must go to individual service rules

(i.e. Part 97, CB, whatever) to see what the specifics are for
that particular service. In the case of hams, any specific records
requirements were dropped by the FCC some years back...and,
therefore, no requirement exists for ham records regardless
of the generic requirements external to Part 97.

Oh fine, we must all maintain certain records, but you can't
tell us what they are.

Sorry, does not compute...and history
seems to strongly indicate the FCC has ZERO interest
in creating any ham station documentation requirements...for reasons
that are certainly obvious given the multitude of stations any
one individual can have at any one time.

Cheers,
Bill K2UNK

Uh, Dave, you have no such authority, or do you? By working French Hams out
of band, after having been informed they were out of band, by participation
in the QSO you apparently thought you had the authority to grant them
permission to operate out of band.

And, apparently you've never been to a piece of real estate that has no governing authority. My DX operation from Somalia is unique. That's why a 12.63 second QSO wasn't sufficient. You'll never understand that because you'll never be faced with such a situation.

>licensed under Part 97.

Maybe I was misinterpreted. Part 97 does not set forth a list of
items that ALL licensees are required to keep as "station records"
but there are items called out that must be maintained as part of
"station records" only if they apply to specific licensees:

Designation of another licensed operator as a control operator
per 97.103(b).

Measurements and determination of RF Exposure if operating in
excess of the limits specified in 97.13(c)

Special records required by order of the FCC District Director
(formerly called EIC) or equivalent Resident Agent as set forth in
Section 97.103(c) and as delegated in Section 0.314(j) as
necessary to resolve conditions of interference or deficient
technical operation.

Contents of communications transmitted by Spread Spectrum emission
if so required by the District Director or Resident Agent per Section
97.311(c)(3).

Records required to be kept in accordance with the terms of a
Special Temporary Authorization or a Rule Waiver or Grant of
License or similar Order issued to a specific licensee for a
specific reason.

Hope that clears up some of the confusion.

Not at all. Please see my earlier post which lists some items
which - IF REQUITED TO BE KEPT - constitute "station records"

It matters not whether they are kept in a file box marked :Station
Records" or in an old Ritz Crackers box.

No licensee is required to have such items UNLESSS it spplies to him
or her.

>What is wrong with the common sense approach that such a requirement

I advovate retention of such material but the Rules do not REQUIRE
it. There's big difference between "required" and "voluntary" records.

Wanna' change the Rules to make record-keeping more burdensome for
every amateur? Remember Bill Cross' warning.....

>(Oh, I forgot; You're a lawyer, and common sense and the law never work

>Apparently use by a Sheriffs dept...
>These appear to be Trunk mounted transmitters & recievers...?

50 year old tube junk, using vibrator power supplies. Takes up half
a trunk, weighs half a ton. and sucks up primary (12V) power like
mad.

>Does anyone have a use for these?...Are they legal to use (or sell)..?

No modern commercial use (doesn't meet current standards - as if anyone
would want to install those boat-anchors) and yes, legal to sell to
amateur radio licensees only if you acquire them legally.

For far less than the price of replacement vibrators (if you can find
them), replacement tubes (if you can find them) and re-crystaling
and retuning for the one or two VHF ham-band channels it would be
limited to, you can buy a fully synthesized 2-m transceiver weighing
a lot less, a lot smaller, wuth loads of features that the old stuff
doesn;t have, and using a lot less primary power.

Use them for land-fill.

'Taint my thread, but I have a LOT of feelings about A-B. The stupid things go beserk for almost no reason at all. You'd better not have any ground loops or you're lost. (don't ask how the ground loops got there. I don't need to take any more Rolaids). Ladder logic is easy, but there are better ways of attacking a problem (usually). However, management in my company has determined that A-B is the only way to go (and we can't buy anything else). I wonder who has stock options in A-B? Guess I'll have to fire up the search engines and check out the Mitsubishi machines. BTW, can I get an interview with your boss? I've programmed a heck of a lot of 'was' gates in my time .. 120/208 3 phase to Vcc ;)

> Uh, Dave, you have no such authority, or do you?

Precisely my point, Brian. I do not have any more authority to grant
you operating permission from Mount Athos than did the fellow who gave
you permission to operate from T5.

> By working French Hams out
> of band, after having been informed they were out of band, by > participation
> in the QSO you apparently thought you had the authority to grant them
> permission to operate out of band.

I had no authority to grant and I certainly don't license French hams.
As far as I know, only the French government can discipline French radio
amateurs. I operated my station where I was permitted to operate.
Your moral and ethical authority has, by the way, just expired.

> And, apparently you've never been to a piece of real estate that has > no governing
authority.

I've never operated from such a place. Some hams have and their
operations were accepted for DXCC credit. Perhaps you've already read
the history of some of those operations.

> My DX operation from Somalia is unique. That's why a 12.63 second
> QSO wasn't sufficient.

I'd imagine that you had to take a lot more time explaining to each
fellow you worked that the card was not good for DXCC credit.

> You'll never understand that because you'll
> never be faced with such a situation.

It has yet to be determined whether I'll ever be faced with such a
situation or whether I have the ability to understand it if I should
encounter it.

He was the commander. You were not. The on-scene commander makes the
decisions. You go decide to work more hams out of band.

> > By working French Hams out

Without having one of my cards, just how do you know its not good for credit?

> > You'll never understand that because you'll

It has yet to be determined. Yet... you seem to know all about it, Oh Supreme Master of DX.

If there had been a Ministry of Communications, like the places you go to, I would have been more than happy to wipe off my boots at the door, clear my weapon, and go in side to fill out the proper paperwork.

But there was not a Ministry of Communications. And you say the on-scene commander has no authority to authorize what one of his soldiers, sailors, or airmen does?

Thus, no amateur operation from Somalia can be legal?

Dave, your boat just left.

If there is one in existence it should be preserved to answer the
inevitable 'If they didn't want us to work skip why did they put us on 27
MHz?' question.

Have you asked anyone at the DXCC desk? Maybe I'm going on what you've provided: 1) That your operations have not counted 2) That you don't know if your operations counted. Pick a story you like. Maybe I have insider information and am using it to further embarrass and discredit you.

What's to know--that there was action by the U.S. military in Somalia?

> If there had been a Ministry of Communications, like the places you
> go to, I would have been more than happy to wipe off my boots at the
> door, clear my weapon, and go in side to fill out the proper > paperwork.

I've been in places where there was plenty of gunfire. I've also been in places where it would have made little difference if you wiped your boots or not. Nobody could have told the difference.

> But there was not a Ministry of Communications.

Was there no Ministry or was it a case of nobody being home?

> And you say the
> on-scene commander has no authority to authorize what one of his
> soldiers, sailors, or airmen does?

No, I say that a commander might grant authorization which is not his to grant. I say that higher-ups might not approve of such authorization. I say that the DXCC desk might not credit such operation. What has the DXCC desk said about your operation from Somalia? Have you found if it counts or not?

> Thus, no amateur operation from Somalia can be legal?

Other operations have counted throughout the years. Did yours? Who granted permission to operate for those accepted operations? Do you think the ops from the accredited operations knew if their operation was accepted for DXCC credit? Do you think they spent a lot of time describing quality of Somalian sand?

> Dave, your boat just left.

Damn! I so enjoy a nice boat ride. Was it one of those downriver trips to Cincinnati with stops at that possible DXCC entity Blennerhasset Island? It's nice that you always take us for a ride Brian.

Well, since you're so dismayed by the 2M band, guess you'll have to "draw
fire" against yourself.

The pitiful thing you will never realize, Larry, is that most reasonable
people who read anything you have posted in this newsgroup will realize that
you are pretty much dead-set against being friendly in any way, and the only
thing that motivates you is whatever is "in it" for Larry. It's also very

obvious that you take all your perceived life's failures out on the whole rest of the world and that it's anyone's fault but your own.

So, due to the fact that you are too incoherent to understand that "drawing your fire" is the most miniscule of concern to anyone, you go on about flooding yourself in your own grandeur. You are the only one who believes what you say--everyone else gets a huge laugh out of you...

Oh, wow. Now I get it. Larry, you think I am supposed to believe that I bring ham radio "one step closer to extinction" because you and/or Riley Hollingsworth may have said it. Guess what? I don't believe it. And, you should put less stock in what other people tell you to believe...ROFLMAO...

It fell under Pres George Bush and the Joint Chiefs of Staff.

They called it Operation Restore Hope.

Perhaps you are planning a trip to Somalia? I understand we (the USA) might
be going in again to fight Al Kaida. Maybe you could ride their coat tails
as some kind of CW order wire hotshot.

> Have you asked anyone at the DXCC desk?

No, I never have. I don't know that they are accepted or rejected.

Maybe I'm going on what you've
> provided: 1) That your operations have not counted 2) That you don't

Dave, I've no corner on the embarassment market. It's happened plenty of
times in my life. Disappointment, too. But then, there is happiness, pride
of accomplishment, ...

Welcome to the land of the living.

> counts or not?

Dave, if you say my commander has no authority to grant authorization, what is it to the DXCC desk? How can they grant it? They have no authority over Operation Restore Hope, me, nor Somalia.

I just don't understand.

> > Thus, no amateur operation from Somalia can be legal?
>
> Other operations have counted throughout the years. Did yours?

I don't know, but how could it? No one had the authority to authorize it.

Who
> granted permission to operate for those accepted operations?

My commander.

Do you
> think the ops from the accredited operations knew if their operation was
> accepted for DXCC credit?

I can't speak for them. The other operator, a marine, seemed to have everything figured out. He went to places like that all the time, and had his ham/mars shack palletized, ready for deployment. He ran phone patches on 20M and MARS for his troops.

Do you think they spent a lot of time

And, of course, hopefully they will make the written test easier. The way I take it, as long as you can spell your name and can put your address down properly, you get the license. Oh, maybe 50% will be passing (I've seen that proposed). I hope you're up to it.

Why do these 'no coder' types (whatever a no coder is) think that the use of CW will magically go away if/when the ITU decides not to make it a licensing requirement?

You 'no coder' types may need to re-evaluate your position when the 'coder' types just continue to march on not giving two hootes in hell if you like it or not.

Source record: 50616

The Ham radio awards do not emphacize the skill involved.Ham Radio is now a lame hobby. Thats why I am not a "Ham". I feel that "Joker" has some valid points.

>Because it's a lame award. There is no control of any kind about the power
>used by hams. Most hams use 5 or 10 times the legal power to smash people on
>pile-ups and obtain their DXCC. Nobody cares. Ham-radio is became a war of
>amps.

The award has the wrong emphasis. There are WAS, DXCC, ragchewing, elmer awards. About the only thing that counts now is volume. Quantity over quality. One should not feel proud over that. The awards should be about setup time, amps, weather conditions, propogation conditions. These awards do not even exist.

>The real ham spririt has disapeared, there is no more friendship on the
>overcrowded bands (like the 6m band during an opening) because there are too
>much hams considering ham-radio not as a hobby but like a war "Oh he got a
>3.5 kW amp, I will get a 6 kW soon !".

Perhaps the "real" Ham spirit is surfacing, not dissappearing? I do not care about history. All I know is Ham Radio is lame NOW.

That's the spirit now : to have the
>bigger equipment and to collect awards to put on the walls of his shack and
>have his picture in QST.

Thats the real Ham spirit. QST articles give a false sence of adventure and show how lame Ham Radio really is. Probably very few non Hams actually read QST, so this doesn't really matter. It makes Hams feel good to have this "accomplishment".

>Most of the "DX" are done by clusters. No need to have understood the call
>and locator, just look at the cluster and ask the guy what you have missed.

Thanks.

>and when you think that
>EVERY state in USA is a DXCC entity, it's totally a joke !

Funny how you should mention this last, since it is so obviously factually incorrect. However, I feel your point is valid.

Maybe in the Communications Act, but not in the Internal Revenue Code, where many things are defined as exceptions to other things. "Except" seems to be Congress' most frequent word in that Title of the U.S. Code. :-)

Well, you asked, "which agencies I hang around...." In that arena, "adequate records" has been defined by case law history where statute or regulation failed to.

>
>And today the current prospective ham doesn't have a choice
>either, so would you rather they not become hams so we don't have
>these "dumbed down" hams on the air?

I've never said that, JJ -- it's just that a lot of people like Brian and Kim
have assumed it. And we all know what happens when we assume, don't
we? What I do in this newsgroup is respond to other newsgroup
participants who make postings criticizing the Morse code or the (soon
to be former) Morse code testing requirements. In my real-world
experience with real-life hams who are real people and not just words
on a computer screen, they generally don't whine and complain about
code testing. Those who do, I deal with in different ways, depending on
whether or not they are willing and/or able to discuss the matter in a
satisfactory manner. My responses have ranged from convincing them
to learn the code to warning them not to let the door hit them in the
ass on their way out (of the ARS). For those who haven't bothered to
make an issue of whining and complaining about something of which
they know absolutely nothing, I have been perfectly willing to accept them
as people who had a right to take advantage of existing licensing
requirements and the privileges they gain therefrom. Along the way,
I've used a lot of wry humor and hyperbole. For those who have not
understood my meaning, on or between the lines, I would suggest some
remedial education in the use of the English language.

>What if the older generation
>of hams who took the much harder essay tests said that about us
>who came later?

That is precisely what a lot of the "older generation" hams have done --
on the internet and elsewhere. To the extent that they have been the
instigators of untoward behavior in the code/no-code debate, I don't
consider them to be any better than the NCTA's who accused me of
"ethnic cleansing" or not being "inclusive."

>If you were deciding today to get a ham license
>would you refuse to do so because the tests are much easier now?

No. Why should I?

>lame hobby.

Another PUTZ who has NO VESTED INTEREST in Amateur Radio, no EXPERIENCE in Amateur Radio, and no REASON TO BE HERE excpet to antagonize and harrass. probably another "professional radio engineer" in southern California.

>Thats why I am not a "Ham". I feel that "Joker" has some valid
>points.

Yes, they DO "emphacize" (you need to check your spelling if yo are going to insult with it...) skill. I have DXCC and I can tell you not one single contact was made with more than 100 watts nor an antenna greater than an Inverted Vee or Dipole. It was NOT that easy.

And you're NOT a "Ham" because you can't hack it...nothing more, nothing less.

>The award has the wrong emphasis. There are WAS, DXCC, ragchewing, elmer
>awards.

What in the Blue Blazes are you babbling about? Are you drunk while you spew out this stuff? Do you intentionally write in doublespeak or are you just an idiot? (I lean towards your being an idiot)

>About the only thing that counts now is volume. Quantity over
>quality.

If you're NOT an Amateur and DO NOT PARTICIPATE in these awards, from what INFORMED position do you make such ignorant assertions?

>One should not feel proud over that. The awards should be about setup time,
>amps, weather conditions, propogation conditions. These awards do not even
>exist.

"Set up times"...???

"Amps"...???

"Weather conditions"...???

"Propogation (sic) conditions"...???

WHAT AN IDIOT!

Hey Lennie....YOU GOT COMPANY, PUTZMASTER!

>Perhaps the "real" Ham spirit is surfacing, not dissappearing? I do not care
>about history. All I know is Ham Radio is lame NOW.

From what INFORMED position can you make such assertions? You are unlicensed which means you cannot participate in ANY awards programs save for a couple by CQ magazine which allow "SWL" participation.

Does yor mommie and daddie know you are playing with the computer, "vshah"...???

Anonymous PUTZ!

>Thats the real Ham spirit. QST articles give a false sence of adventure and
>show how lame Ham Radio really is.

For something supposedly offering a "false sence" (check that spelling, dungbreath), there are quite a few folks participating in it, in the US and world wide, not to mention the US Space program which incorporates it into the Shuttle and ISS.

>Probably very few non Hams actually read
>QST, so this doesn't really matter.

Why in the world would "non Hams" read QST unless they have a specific interest in Amateur Radio..??? That would be like an animal hater getting a subscription to "Cat Fancy".

>It makes Hams feel good to have this
>"accomplishment".

As a matter of fact, I DO feel proud to have done it. So what? I did it and YOU (and other unlicensed putzii) have not.

>>Most of the "DX" are done by clusters. No need to have understood the call
>>and locator, just look at the cluster and ask the guy what you have missed.

Unfriendly? Moi? Shirley, you jest! Compared to the NCTA's who
accused me of "ethnic cleansing" and not being "inclusive," I think I'm
a downright friendly sort of guy!

>and the only
>thing that motivates you is whatever is "in it" for Larry.

What is "in it" for me as far as participating in this NG is concerned,
Kim -- other than a raging case of Carpal Tunnel Syndrome?

>It's also very
>obvious that you take all your perceived life's failures out on the whole
>rest of the world and that it's anyone's fault but your own.

Which "failures" would those be, Kim? I've had some problems, but
who hasn't? My life is just fine by me -- but thanks for your concern!

>So, due to the fact that you are too incoherent to understand that "drawing
>your fire" is the most miniscule of concern to anyone,

Kim, don't look now, but I don't axe people if they're concerned about
"drawing my fire." If they say something stupid in this NG, I slam-dunk
'em, quite gratuitously. (That means I didn't bother axing their permission
to do so!)

>you go on about
>flooding yourself in your own grandeur.

Don't look now, Kim, but you're the one who is constantly bragging about being a single-handed Emergency Communications Team in her local area, and went to the trouble to send Riley Hollingsworth an E-mail in which you attempted to get him to agree with you that you had a Constitutional right to select your call sign. He agreed with you, all right --
then slam-dunked you for your poor judgment by making the now immortal observation that you are taking the ARS "…one step closer to extinction." YOU are the one who is seeking glory in ham radio, YOU are the one who is trying to place herself in the role of being a "leader" in ham radio. However, you cannot handle the likes of me in this NG, and can come up with nothing better than pathetic attempts to turn my own words back on me, such as the above, usually punctuated with one of your classic, scathing "ROFLMAO's."

>You are the only one who believes
>what you say--everyone else gets a huge laugh out of you...

So you say, Kim -- only I think you've got it backwards, as usual. If anyone's laughing at me, they're probably holding their noses while trying to endure your pathetically puerile postings.

Ah, Mildenhall! Spend two of the best and worst years of my AF career there! I was the NCOIC of Passenger Service at the MAC Passenger Terminal. I'd arrive to work at 0400 after driving the 3 miles from my house in downtown Mouldyhoule essentially by feel. I'd then walk out on the aircraft parking ramp behind the terminal building, hold out my hand, and instead of touching the face of God, it would disappear in the fog! The World Airways DC-10 Cat-B flight from the states, usually originating from Charleston or St. Louis, would be due in at 0600, and were it not for the fact that MHZ is a CAT III airfield, would never have a chance of arriving on shedule. Of course, sometimes the plane wasn't equipped for CAT III, or the airfield's equipment was down, and we'd end up twiddling our thumbs while waiting for it to get in. Oh well. I'd do anything to be able to re-live those two years -- even put up with my idiot of a boss.

Hey, Steve, let's steal the trolls thread! Your post reminded me of something I noted during field day which may be of interest.

I was running the GOTA station, and one interesting thing I found was that a number of the prospective hams thought it was "too hard" to work, one of the kids referring to it as a "toy station". They liked the other stations that we used, which were running a cool Kilowatt. Pick a frequency, camp out and you be the man! Since this was what they had at the other stations, mine seemed to be too much for them.

Another member became control operator for a while, and worked fo a couple hours with his son. It was a joy to watch as he guided him through the ins and outs of working with lower power, showing him how to operate intelligently and how sometimes you wait a few seconds before transmitting in a pileup. All those little things that make it possible to work stations effectively. And learning a valuable skill.

The adults and kids who thought my station was so difficult to work were only showing their ignorance of the situation. The kilowatt stations working relatively locally skewed their perspective.

I would challenge the trolls to produce a DXCC award in let's say one month? Working with say 100 watts? After all, it is sooooo easy. Whattya say? Heck, I'll give them two months.

They bellied up big time. The wife of a friend worked in one; the manager
was called about 8 PM, the place closed and everyone was told to go home,
the door was locked and the bankruptcy receiver wrapped things up in a few
days.

I wonder how far sweetums would get in an interview for a radio
engineering position at Rockwell-Collins, Harris, General Dynamics
Fort Lauderdale, Motorola, Nokia, Yaesu, or Icom with his box of
PLCs?

Sweetums hasn't seen Microchip's product output or monetary
input and couldn't program an interrupt to service an A-to-D
strobe to display a signal strength if it bit him.

No problem. He is loud, proud, unbowed and still thinks WW2
jeeps have 28 V batteries. :-)

In article <20020802014335.09248.00000990@mb-mf.aol.com>, Gargle-Elmo Macaroni (FamousExMilitaryPerson@aol.com) writes:

>>Incorrect. Paul Mantz was NOT "in retirement." The "reconstructed aircraft" >>was NOT designed by any model airplane designer...but rather as a one-of-a->>kind experimental aircraft built by Tallmantz Aviation then based at Orange >>County Airport, CA (now renamed "John Wayne Airport").
>
> Do you REALLY enjoy embarrassing yourself in public, Oh Putzy One?
>
> The "reconstructed aircraft" WAS "The Phoenix", Lennie.

"Reconstructed" only in the sense that a real, flying aircraft was designed to approximate that of the original novelist's idea. There were at least two transport aircraft that resembled the novel's crashed aircraft, but the rebuilt (from crash parts) aircraft never existed before the movie company started.

Novelist and mystery writer Elleston Trevor wrote the novel (published 1964) which was adapted for the motion picture released in 1965. HarperCollins was the publisher and a shorter form was in Reader's Digest Condensed Books.

> MAYBE if you had watched the movie, you'd know what we were talking >about.

I was privileged to watch it first-run, met at least one cast member and several of the location production crew, plus two members of Tallmantz Aviation that built the movie aircraft.

> And IN the movie, one of the characters, a German fellow whose name >escapes me, develops a plan to rebuild part of the crashed twin engine plane >into a single engine plane.

If Gargle-Elmo had seen the movie he would have recognized an excellent German actor, Hardy Kruger, in the role of Heinrich Dorfmann, one of the fictional passengers stranded in the Libyan desert.

> During the course of the story, it's found out that he's not a "real" >aircraft engineer...He designs model aircraft.

Aeronautical physics are scaleable up and down from "real." That's why wind tunnels use scale, miniature aircraft to test aerodynamics before a full-scale aircraft is made. Aerodynamic principles hold for all aircraft, small or large.

The story hinges on the ignorant non-aeronautical readers and audience keying to the depreciating "toy" or "model" aircraft. That is absolutely necessary to introduce conflict between characters in the story, to build suspense. The character of Dorfmann tries to explain that aeronautical principles apply to big aircraft the same as little aircraft...which pilot Frank (James Stewart) doesn't believe at all until the end of the movie (see final scenes of survivors Frank and Heinrich walking together towards the wadi).

The entire novel, movie, and even the mythical bird, the phoenix, are all fiction. The mythical bird didn't exist, there was no parallel of a real crashed aircraft being rebuilt to a flyable version and flown to safety. It is very entertaining fiction, but it is still fiction.

There is a parallel with the fiction of "CW is necessary in a test because a simple radio could be constructed in the event of a disaster." It is myth, fiction, an often-told tale which has no basis in reality. There is no evidence that it has ever been done under such conditions but the myth has an emotional comfort to it, most satisfying to those vehemently arguing in favor of the code test. It is brain candy for the ignorant.

> Just ONE MORE glaring bit of evidence of what a stupid, demaning and
>arrogant PUTZ you reallya re.
>
> Sheeeeeesh.......

Gargle-Elmo is in usual form, unable to recall proper facts on a subject, freely substituting fiction for truth, emotion for logic..

No, I'm not going to Somalia. You must have misunderstood my
qualifications. I ran communications centers. I don't care if they use
CW, RTTY, satellite terminals, SSB or leased lines.

> > > > > My DX operation from Somalia is unique. That's why a 12.63 second

> >
> As if you'd been there.

No, As if I'd worked in a State Department Comm Center, read the papers
and newsmagazines, listened to radio and watched TV. Was it supposed to
be a secret? I'm aware that you were in Somalia. I asked if your
operation was accepted for DXCC. You say that you, the DXer, don't
know.

> > > If there had been a Ministry of Communications, like the places you

MARS QSOs don't count for DXCC credit.

No secret there. It's the same reason all his passed tests have done him
little good. He's all mouth and no action.

Why do so many totally miss the point? When a ham knows how to use CW the opportunities to communicate are numerous far beyond those who cannot. Bob merely notes an extreme example. There are many others.

>say? Heck, I'll give them two months.

I'm game! How's this...We'll set September first as the start date and
October 31st as the cut-off for a DXCC award, September 1st to September 30th
for a WAS award.

No contest periods allowed? Shall we make it a 10 meter only event to
make it fair for the Tech-plussers?

For the NCT'ers, set a VUCC award level..???

Under 100 watts and a dipole only?

We'll even set an SWL level for Lennie the Licenseless and his Band Of
Reknown?

Excuse me? How does knowing cw increase the opportunities to
communicate in numerous ways far beyond those who do not know cw.
I give them one more way to communicate, that being via Morse
code, what are the numerous other ways?

Used to eat there occasionally, good place for breakfast. IIRC it
was sometime in the 70's they had to fold because of the name. Now
if there was a restaurant run by blacks called "Whiteies" do you
think they would make them close it?

Been there . . first they discovered that there were mysterious
voltages between columns on which the the Hoffman PLC enclosures were
mounted. OK, so they drove rods and grounded the columns . . then
there were voltage differences between ground rods . . rooms fulla
high-power AC variable frequency drives . . nightmares.

Been there too. I was working for DuPont when the Central Engineering
PLC geniuses ("Section 8") declared it "illegal" for the plants to
specify anybody but A-B for PLCs in new systems. Bloody disaster. The
plants had heaps of GE and TI I/O machinery in place and were expected
to retrain all their shop floor sparkies to handle A-B too. Then came
the cost issues. The flap went all the way to the DuPont BoD. Within
the following three years the BoD declared Central Engineering to be
surplus baggage, dumped thousands of Dupeys on the street and sold the
site to a credit card operation. Last I heard several years ago the
plants were still buying GE and TI.

The fly in the ointment which will make itself apparent in the next
few years is the current descent of the sunspot counts which will
drive the MUF down below 25 Mhz. There will be several years when all
these goobers with their "high power" ten meter reddios won't be able
to raise anybody beyond the town limits with the things except during
rare band openings. That'll pee on their parade plenty. The coded
Techs who have been enjoying the dxing of late on 10m are about to get
the same "education".

As the President is the Chief Law Enforcement Officer of the land, he is
also the Chief Issuer of Amateur Radio Lincenses in the land. As the
Commander in Chief of the US Armed Forces, he was my boss in Somalia as
well. He appointed officers to be in charge of me. He delegated much of
his authority to those officers. They made decisions for him in his
absence.

Although he did come to Somalia, he was too busy to deal with my licensing
issue.

> he do that?

In Korea, I applied for a Korean license via the Army MARS site in Yongsan. They had streamlined the application process so I didn't have to take my boots off at the front door of the Ministry of Communications. It might have been some agreement in the SOFA.

I did have to report all communist contacts to the AF Office of Special Investigations even though my license had nothing to do with America or the Air Force.

On Guam, a USA Posession, I merely had to sign Stroke KH2 per FCC regulation. Same procedure for AFOSI.

Somalia was different than either. I didn't have a manual on what to do from a country with no government. So when all else fails, you ask your commander.

Apparently, neither do my amateur contacts. Feel better?

Why is it that all twits are Democrats? I mean look at it will you folks.
We have Roger, we have this original poster, and in comes W5TWIT.

Hey leftist twits....what happened to your big deal about 'GUN CONTROL' ??
9/11 wake you up, did it?

Oh and how about all the 'Green Peace' junk? You know the leftest wierdo's
that took the feds and the local government to court to STOP MAKING
FIREBREAKS.

Again I ask....how come TWITS are democrats?

Thanks Kim, the 100' remark (actually 200,000') comes from a logic
lesson I was giving one time in which I challenged anyone to prove
that I am not a 200,000 ft tall alien. (There's an entirely different
dimension to me that I do not normally reveal in public :-)

You should consider yourself lucky, you might get the insurance money back from that dump you call home if it burned down.

> Again I ask....how come TWITS are democrats?

Poor Dumbass Dan, he was too stupid for the Democrats and went to the only parety that would take the crippled gimp, the Republicans.

I am not knocking knowledge of Morse code, I would really hate to
see the requirement go away, but I am amazed at how some seem to
think that knowing the Morse code somehow makes one far superior
to others.

It's pretty clear that is the result of feelings of inferiority -
grasping at straws to feel superior at something/anything. Morse
code skill is simply one more tool in the ham's toolbox.

Of course, other things can happen - sporadic e, for instance.

73 from Rochester, NY
Jim

ps - I see high power cordless phones are being imported and sold - and interfere with aircraft. VHF amps are being sold by sites catering to truckers. The FCC admits that most of the 'business radios' being sold aren't being licensed. Oh, then there is the marine radio question. For some reason, I get the feelings that these idiots would get peeved if someone decided to take over their favorite radio or TV station ... Ah, nothing like tropo.

Some of us may be liberal twits Dan, but we do
know how to enjoy life, eat right, hold
an open mind, accept alternate lifestyle
individuals as equals, and reduce our risk of a
stroke or heart disease worrying and/or being
led about the nose by right-wing yahoos on
shortwave broadcast radio who say there's plans
afoot to put "microchips in our buttocks".

Take it easy. Live life and enjoy it Dan.

Sweetums is a god of radio. He has no problems with other gods, only mere mortals.

I'm still waiting for all those gods of radio to explain how industrial plant control electronics is used in radio or communications.

I'm still waiting for all those gods of radio to explain how knowledge of PLC programming is related to radio or communications.

I'm still waiting for a god of radio to publish a break-through and make a 4 to 20 mA transmitter in a tuna can so they can work enough DX for a DXCC while QRP.

I'm waiting for a QST tutorial in how to read Piping and Instrumentation Diagrams as a necessity for all hams needing more technical knowledge. They could then become Masters of the P&ID.

Maybe QEX will have an automatic antenna tuner article based on some Toshiba PLCs doing all the programmed tuning?

They are able to transcend the ways of ordinary mortals and talk directly
to the gods or with god-like power to "get through when all earthly
means fail." In being god-like, those ways are uncountable.

In other words, they are able to work random noise and report things
that aren't really there...then write down what they heard and post it in
here. No problem. They are gods of radio since they can work CW.

:-)

That won't stop the truckers from using 10 meters, they are not
interested in long distance communications, they are only
interested in communicating with their trucking buddy on the
interstate a few feet ahead.

Here are my "so-called snarly" comments -- in view of your continued
jeremiads on this matter, they bear repeating.

With all kind wishes,

de Hans, K0HB

Leonard H. Anderson (presumed to be r.r.a.p.'s beloved "NoCWTest"), in
rambling comments to the FCC on January 13th, has proposed a new restriction
on entrance to amateur radio. He proposes that license applications from
otherwise qualified persons should not be accepted if the applicant has not
attained their 14th birthday.

This arbitrary restriction, in a service which has historically gained most
new members from youth, seems calculated to choke off new entrants and
ultimately reduce the number of licensees below the 'critical mass' needed
to
justify our frequency allocations. He would deprive young people such as
Scouts and school-based radio clubs of this educational resource, and
accelerate the "technical dumbing down" of America.

GLENDALE, WV: The FCC wrote General licensee Roger L. Wiseman, AB8MQ on March 29, 2000, advising that it had been made aware of "an ongoing personal dispute" that included interference or jamming on 20 meters. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth cautioned Wiseman to review ?97.1 of the Amateur Radio rules and "to make certain that whatever disputes that may exist are not carried over to Amateur Radio frequencies." Hollingsworth invited AB8MQ to contact him to discuss the matter. Last November 9, the FCC sent Wiseman a Warning Notice in response to allegations of deliberate and malicious interference on 20 meters.

alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave,alt.cocksucker.roger-wiseman

GLENDALE, WV: The FCC requested that Roger L. Wiseman, AB8MQ,
retake the General examination elements under the supervision of an ARRL-VEC
volunteer examiner team. Wiseman must appear for retesting by September 11,
2002, or his license will be canceled. Applicants appearing for
re-examination
are granted an Amateur Radio license consistent with the elements passed.
The
FCC had written Wiseman on March 29, 2002, advising that it had been made
aware
of "an ongoing personal dispute" between Wiseman and another licensee that
included allegations of interference or jamming on 20 meters. FCC Special
Counsel for Amateur Radio Enforcement Riley Hollingsworth invited the two
licensees to contact him to discuss the matter. Additionally, the FCC had
sent
Wiseman a Warning Notice last November in response to allegations of
deliberate
and malicious interference on 20 meters.

I agree, JJ. The CB market is now saturated with "10 meter radios".
Truckers use them as "private channels", skip or no skip. They will
not go back to using legal freqs, especially when they've shelled out
$200 or more for their super duper "10 meter radio". Of course with
the spots down, hams who are not near an intersate will hear nothing
and think the problem went away, and more of these "full channel"
radios will be sold in the intervening years. The real surprise will
come during the next sunspot cycle, and by then it'll be too late.

Hans, while I disagree with that arbitrary age restriction, I also disagree
with other arbitrary licenseeing requirements of the FCC.

And I would propose that most of the newcomers come from the ranks of the
retired, including persons with disability retirements.

Hello Dan.

Jim, ask Larry, Dick or Moe and they'll say otherwise. Amateur radio IS
just one thing.

Careful. You might get the "other" Dan on here ranting about making fun of people with disabilities.

And besides, compassionate conservatism includes helping people with disabilities help themselves. Nothing wrong with that.

2896. CW crashes US dollar and US industry

Newsgroup: rec.radio.amateur.policy
Date: 2002-08-05 00:15:00 UTC
From: Chewie <cw@forbid.net>
Message-ID: <200285-1150-372488@foorum.com>
Source record: 50658

In the sixties, USA appeared as a modern country with their space program to conquer the moon. The US dollar was strong and the US economy too.
40 years later, the fact to still glorify CW makes that the world does not trust anymore that USA is a model of progress, but a country of old farts that look forward to the 19th century. So the US dollar falls and the US economy too.
Consequently, about 80% of US hams are CBers and do not even know how to pronounce ENGLISH correctly on the bands. More, they use a "custom" alphabet such as "sugar" (for the "S" letter, which international spell is "SIERRA") that once pronounced is closed to "shogun" (some kind of japanese lord) or even "chougar" that is closed to "OSCAR" in the QSB.
Result : It's impossible to answer to 50% of US hams calling CQ (even they are 59+) because of their bad spelling. That is the consequenses of CW, US hams do not know how to speak (listen to the G guys and you will see the difference).

My 1957 ARRL Handbook says it should be "Susan". My call letter phonetics
at the time were David X-Ray Peter, phonetics that probably sent ham radio
one step closer to extinction.

Yeah Brian I have a big mouth. And I probably did threaten a lot of folks.
And since your curious here is the list.

George Ashley W4FQF Alias Polly Parrot

Billy Jack Moore W4LLI Alias Claymore, Gravel 2. and others. Well known
side kick of Parrot. They would sit on top of our group ALL NIGHT jamming
for years.

Most if not all of the idiots from 3898.

Most if not all of the idiots from 3894.5

Dave Castle WA9KJI. The clown of 3950 fame that would drop down un
ininvited to jam.

Plus all others that just made life miserable for all those years.

And if I did make such utterances...I am not one damn bit sorry? Why is
that you ask? Look at the list and ask again.

But a certain brown liquid and I have parted company. So I seriously doubt
I'll be fool enough to give that scum such a good target any longer.

Bet many of them are really pissed that they can't find me. Bet they thing
I'm gone. Boy they should see my log. Thats right...I keep a log. It's
good in a Federal court, you know that.... right?

Well Brian you take care and don't let these little scum sucking turds
bother you.

Finally, hams have developed something so new that other
radio services or even the rest of the electronics world
don't have it - the CONTINOUS WAVE! :-)

Oh, boy, I know what big Dann was going after...the old, trite
strawman accusation of "don't you know what CW really
means?" Gosh, yes, big Dann, I know..."CW" has become a
synonym for on-off keyed CONTINUOUS Wave using morse
code.

The PCTA seem to be using CONTENTIOUS WAVE when
they try to salute using their index fingers (can't spell well
enough to use the proper middle finger).

Oh, yes, three and a half years ago I was "depriving young people"
from becoming SIX YEAR OLD HAMS after kindly old VEs had
"passed" them in testing.

You "conveniently" left off the reason I gave to the FCC on WHY
I made that, didn't you? You were so eager to make your attack
that selective editing was your weapon of choice.

Okay, since then, US amateur radio has gotten a NINE YEAR
OLD AMATEUR EXTRA. Aren't you thrilled?

How does it feel to be compared to a NINE YEAR OLD?

After your ranting and shouting in here on that "terrible" suggestion,
I simply dropped the age thing. Everyone was all set to do lynching
under the emotional heat of sub-teeners so I dropped it, but some
latter-day sub-teeners want to make like outraged little league
parents now and then. I'll put you down as one of those little kids.

I'll just read in Newsline that US ham total population has stagnated
for two years...even while this "educational resource" went not far
with NO age limit.

>"passed" them in testing.

Now Lennie H makes the insinuation that the VE's are violating federal law
by suggesting they just "passed" the applicants, rather than made a bonafide
passing score on the exam.

More accusations without proof.

>You "conveniently" left off the reason I gave to the FCC on WHY
>I made that, didn't you? You were so eager to make your attack
>that selective editing was your weapon of choice.

YOUR weapon of choice is to repeat lie after lie, over and over, in hopes
it will become fact.

Hans' way was more effective. Ethical, too.

>How does it feel to be compared to a NINE YEAR OLD?

Do you mean how does it feel to be compared to a nine year old as opposed
to being compared to YOU...?!?!

Feels GREAT!

>I'll just read in Newsline that US ham total population has stagnated
>for two years...even while this "educational resource" went not far
>with NO age limit.

Then your age limit wasn't necessary, now was it?

Thanks, Hans. Your words did indeed bear repeating. The fact that they were labeled a "snarly little comment" indicates that you are right on target.

Note also that the Mr. Anderson does not give any examples of problems in the amateur radio service caused by the lack of an age requirement. He has refused to answer the question posed by the subject line of this thread.

The USA has never had an age requirement for any class of amateur license. There is no good reason to add one now.

Back in 1948, in the days of 13 wpm for all classes of license, essay and draw-a-diagram exams, a local nine-year-old earned a Class B license. Still an

active ham more than a half-century later.

More recently, (about 1996) an eight-year-old earned the Extra class license.
Good CW op - we had a nice 20 meter CW QSO in 1998.

The above are just two examples - there are many more.

>standard there.

In other words, because others have called Lenover21 "Lennie" (derived from the
characters 'Lenny and Squiggy' on the TV show "Laverne and Shirley"), he thinks
it gives him the right to call me "Jimmie" and other names.

It's the same 'logic' that's behind prejudice and bigotry.

What Lenover21 tries to do with his name-calling is to provoke angry responses
from those called names. Then he plays innocent, with a lame excuse of "humor"
or that it was 'meant to be friendly'. And thus diverting the discussion that
wasn't going his way.

Try to get an honest answer out of Lenover21 as to why there he thinks there is a need for an age requirement of 14 years for a US ham license. All he has done so far is to refer to the licensing of a few six-year-olds - but no reference to problems this has caused. He BELIEVES that the licensing of young people is a problem, therefore we must all bow to his belief system. As if.

>The problem of the SW BC interference to amateurs in the
>40 meter band has been around since WARC-79 and, so
>far, very little has been done despite all the claims of "the
>ARRL is working in Washington, Geneva, and elsewhere."

It's been around a lot longer than that. It goes back more than 50 years.

>By WRC-03 the 40m problem will have been around for 24
>years with no signs of easing.

More like 60 years.

>The IARU has been more
>aggressive in that matter...see their strong, colorful
>presentation on their own website. What has the ARRL
>done as effectively as the IARU or other amateur
>organizations in the past 23 years? Make excuses?
>Make promises? Make claims?

They have tried to rectify the problem. It's not easy because the other services don't want to move.

What should they have done? The basic problem is that the various services all want spectrum around 7 MHz because of the propagation. SWBC is the predominant user there besides hams, and since many SWBC stations are government-run, getting them to move consists of getting various governments to consider hams' needs as higher than their own. Not an easy selling point, particularly when you consider the relatively small amateur radio population outside Japan and Region 2.

If the SWBC folks say they don't want to move, how can they be forced? What would YOU do?

>There were skeptics who observed the activity of Worldcom

Possible, but highly unlikely.

>What if the FCC (or your country's equalivalent, if you're not in the USA)
>decides *not* to "sunset" the code testing requirement along with the
>ITU RR requirement?

Possible in some countries, very unlikely in the USA. FCC's pronouncements on the subject and their acceptance of the minority opinion of comments on 98-143 make it quite clear that the only reason FCC didn't dump all code testing as a part of restructuring was S25.5.

That's true.
>
>The story hinges on the ignorant non-aeronautical readers and
>audience keying to the depreciating "toy" or "model" aircraft.

Partly true. Would YOU go along on the first flight of an aircraft designed by someone who had only designed model aircraft?

The story also hinges on the fact that the designer did not mention the fact that he designed model aircraft until the project was well under way.

>That is absolutely necessary to introduce conflict between
>characters in the story, to build suspense.

Not really - it just adds to it. Even if Dorfmann were an experienced designer of full-size aircraft, the Phoenix design would be extremely risky.

>The character of
>Dorfmann tries to explain that aeronautical principles apply to
>big aircraft the same as little aircraft...which pilot Frank (James
>Stewart) doesn't believe at all until the end of the movie (see

Incorrect. Frank Towns knows the THEORY is the same. It's the PRACTICE that he is concerned with.
>
>The entire novel, movie, and even the mythical bird, the

That's true in a literal sense. There's a lot more to "The Flight Of The Phoenix" than the literal story. Try to look beyond Extreme Literalism, if you can ;-)
>
>There is a parallel with the fiction of "CW is necessary in a
>test because a simple radio could be constructed in the

>event of a disaster." It is myth, fiction, an often-told tale
>which has no basis in reality.

The idea that the TEST is necessary for all hams because that situation might arise is possible, but it strains the imagination because it is so unlikely.

But there have been cases where a simple CW/Morse transmitter was built by a ham under disaster conditions and used for emergency communications, saving lives. These examples are not legends or myths but documented events. Here's a hint: W9MWC

Trouble is, they are documented events of 60-plus years ago.

>There is no evidence that it
>has ever been done under such conditions but the myth has
>an emotional comfort to it, most satisfying to those vehemently
>arguing in favor of the code test.

Except that it's not a myth at all - it has happened that a CW/Morse transmitter constructed under disaster conditions was used for emergency communications that saved lives. A long time ago. But it DID happen.

The key (pun intended) question is this:

Is the probability that Morse skill will be needed in an emergency situation so high that code tests for all hams must be retained for that reason alone?

It's an opinion question, and opinions differ. My opinion is that the probability is so low as to be negligible. But I could be wrong.

>It is brain candy for the ignorant.

Like the ignorant folks who claim that construction of an emergency CW/Morse transmitter has never happened? ;-)

>output transformer would be disassembled, unwound to get a
>thin-wire antenna, too short for AM BC frequency range but long
>enough for FM BC range.

No imagination. No need for all that.

Use the old audio stage as an oscillator, tuned by the old tuning cap and a new coil made from house wire. Unless you're on a desert island, there's wire around. House wire is good for antennas, too.
>
>This new "PA" stage might have an MF or VHF output anywhere

Don;t forget to make the IF stae in the receiver oscillate for a BFO.

Better yet, remove turns from the coils and move the whole mess up to the 80 meter band.

>The problem now would be in finding someone outside
>the disaster area that could decipher morse code sufficiently to
>determine the disaster location (assuming it could be identified),
>number and condition of survivors and what specialized help would
>be needed (medical? first-aid needs? food? shelter?).

Easy. Just find some hams who know the code.

The lack of imagination on the part of Lenover21 is obvious.

With a little ingenuity, the audio stages of the first receiver can be used as a modulator for the converted second receiver, putting it on AM. The second receiver's dynamic speaker and output transformer can be used as a microphone.

No need for CW/Morse at all, in that case.

During WW2, it was common practice to convert an old BC receiver to WERS 2-1/2 meter transceivers. The audio stages and power supply were left basically intact, while a single tube was used as both a superregenerative detector and modulated oscillator. The BC tuning cap had plates pulled and a new coil made from heavy wire. Most difficult part was the switching. The sets were good for local AM communication up to a few miles with a decent antenna. Better techniques existed, but under wartime rationing many parts were hard to obtain.

Then there were the adventures of KG6GJX, the "Ghost of Guam"

Shall I send you unsolicited emails with attachments, then?

>Now that you have it, do you want to argue little
>picayune details of it, make Himilayas out of anthills?

No - you're much better at that than I. Like your idea that the licensing of
under-14-year-olds is a problem for the ARS. You haven't cited a single problem
caused by the lack of an age limit. Your motivation is probably something like
'I didn't get a license before age 14, so nobody else should, either'. ;-)
>
>>I don't want it. I'll take your word that you once had an FCC commercial
>>license.
>
>Now you have near-tangible PROOF.

Not at all. Scans and JPGs are easily faked. Of course you'd never do such a
thing - we should all just trust you implicitly. ;-)

Where is the evidence that YOU are 'honest'? ;-)

> If you want to make an
>*ISSUE* out of it, go to the FCC.

Why? they don't care.

>Okay, you got my first Form 758A.

No, I didn't even bother to download it.

>What are you going to do about it?

Nothing - it's irrelevant.

Apparently you missed the soldering irony.

>There's no reason that soldering an 8-pin
>microphone connector or a db-9 connector, and a pl-259 shouldn't be part of
>the exam.

It is interesting that all of the examples you give are connector soldering
examples.

Most hams would simply learn what was needed and pass the test.

But then some would complain that since soldering was not absolutely necessary to the operation of an amateur license, it shouldn't be on the test. Demands for medical waivers would appear. Hams who had to pass the connector-soldering tests ('rosinists') would be snotty to those who hadn't, and vice-versa. Some would point out that hand-soldering was almost obsolete, replaced by automated techniques ('wavists') and no-solder connectors ('crimpers'). Eventually a group would arise (NSI) demanding an end to all soldering tests.

>How about using a VOM to measure several different parameters of a circuit?

Digital or analog?

>75-meter SSB, or running it at 5 W on CW?

Actually, the best utilization is to use rigs which draw far less power than an
IC-706 (on receive as well as transmit). My Elecraft K2 needs less than 300 mA
at 12 V on receive with all the accessories turned on. A K1 draws as little as
40 mA.

Ask W5DXP. Better yet, try to sell him some Amazon stock, based on the
'profits'.
>
>>No. You're not the boss.
>
>...and YOU insist you are the "boss" in here... :-)

"The Boss" is Bruce Springsteen. I don't claim to be him.

I did grow up two blocks away from Todd Rundgren, though. Never met him.

In fact, my home town produced Mr. Rundgren, Jim Croce, Cheri Oteri and Tina
Fey, to name just a few. Also Barker&Williamson.
>
>>How? Do you not want to be addressed as Lenover21? That's your screenname,

Ah - so you WANT others to call you the names he calls you? OK, can do...

>>>>>Is Amazon still in business after many years? If so, it must be making
>>>>>a profit. Businesses do not continue in business without profit.

By that definition, Amtrak is making a profit, because it's still in business
after 30 years.

>>>Why are you so angry at Amazon?
>>
>>I'm not angry at them.
>
>You must be to make such an issue over them.

Nope. I'm simply pointing out yet another of your mistakes. Despite your
claims, Amazon is not making a profit. They are deeply in debt and losing money
like mad on an annual basis. Fortunately, their rate of losing money is
decreasing. Hopefully they will become profitable soon - for more than one
quarter, too.

>You have stock in
>them and they aren't paying you dividends? :-)

I don't have any stock in Amazon directly. Do you?

Amazon has not paid a dividend since 1999.
>

>>code
>>testing, they wanted at least two code tests (5 and 12-13 wpm). The MINORITY
>>OPINION won out over the MAJORITY in that case.
>
> <insert about 45 minutes of "BWAHAHAHA" guffawing here>

You're laughing at the results of an analysis of the comments done by an NCI
person. He did a very thorough job. Do you think he was biased in favor of code
testing? I don't. In fact, I am impressed that NCI folks had the honesty to
report the results here, even though they clearly showed the nocodetest opinion
to be in the minority.
>
>>Do you believe in minority rule? If you agree with the FCC's dropping of the

>
>Wow,

(N2EY)

>you're so FIXATED on the "need for code testing"
>and ARRL propaganda brainwashing that you can't see what it's
>all about.

Sure I can. It's all about the FCC not being convinced that code testing serves a regulatory purpose anymore, except for S25.5. I had my say, others had theirs, FCC made their decision. That's what it's all about. I'm not fixated - you are.
>
>The FCC establishes the licensing criteria,

Based on a number of factors. Comments are one factor.

>NOT the licensees who
>have already been licensed
>nor the demands of the ARRL (which
>has formerly dominated lobbying as a MINORITY organization).

Most of those who commented were already-licensed hams. Everyone had the opportunity to comment - no license required.
>
>There was no "official poll" of all the 2600+ documents on public
>view for the 98-143 NPRM. The FCC did list all the names of the
>commenters but there were fewer actual individuals due to so many
>making more than one comment.
>
>Did you read ALL 2600+ DOCUMENTS?!?!?

Many of them were duplicates. NCI did the survey - argue with them ;-)

> If you
>did you would find that the majority of the PCTAs commenting were
>doing so on the basis of each one of them having to go through all
>the steps in upgrading and testing at higher and higher code rates.

Did YOU read ALL 2600+ DOCUMENTS?!?!?

I don't think so.

But an NCI member did, and categorized them. Published his results here. The majority of commenters wanted at least two code test speeds. The FCC did not find the procodetest arguments compelling enough to retain code tests above 5 wpm, so the minority opinion took the day. End of story. FCC is not required to accept the majority opinion, so we got minority rule. Simple fact. Live with it.

>Nearly all of them cited their "tenure" in amateur radio as one of
>the prime basis for "knowing what was best for the future."

How is any of that "wrong"? They have experience, and have formed an opinion based on that experience. Other hams, with similar experience, argued that code testing was no longer necessary.
>
>Somehow, nearly everyone of those long-tenured knowledgeable-at-
>what-is-best-for-the-future-based-on-their-personal-past had failed

Nope. They just disagreed with it. Do you think FCC is infallible?
>
>>>No Code International is an international organization that seeks
>>>the elimination of the morse code testing for an amateur radio
>>>license anywhere.
>>
>>They claim to represent all radio amateurs everywhere, then.
>
>No, they represent ALL interested parties in the code test issue.

Nonsense. They do not represent any interested party in the code test issue who is FOR code testing. Just those against.

Ask K2UNK or WK3C if NCI "represent(s) ALL interested parties in the code test issue." I really do think they will say "no" or "no, just those who oppose continued code testing".

>No one need be an amateur licensee.

So? The same is true of commentin to the FCC or joining ARRL.

>>> No Code International does not restrict
>>>membership only to licensed radio amateurs.
>>
>>Neither does ARRL.
>
>VOTING membership. I can get a subscription to QST and have
>all the "voting" of a public library on ham issues...:-)
>
>That is just "membership" in a changed-definition sense.

All it takes to get VOTING membership is a Tech license - attained by six-year-olds. No code test needed for a Tech - been that way over a decade. Get with the program!
>
>>>The ARRL claims to represent "all" of US amateur radio yet its
>>>membership is less than a quarter of all licensed US radio amateurs.

Where do they claim to represent ALL? You used quotation marks - where's the original statement you are quoting?

You have claimed of NCI:

"they represent ALL interested parties in the code test issue."

(that's a direct quote - your own words)

It's obviously untrue.
>
>>NCI claims to represent what's best for all amateurs everywhere.
>
>NCI and its membership are only interested in ending the International
>Morse Code testing requirement for any amateur radio license exam.

They claim that's what's best for all amateurs everywhere. Maybe they're right.
I don't think so, and they don;t think I'm right, but you don't see K2UNK and I
calling each other "Billie" and "Jimmie" because of that little disagreement.

>>>The ARRL keeps wanting more money.
>>
>>Costs money to do what they do.
>
> H O W M U C H ?

Lots and lots. Why don't you give them some? I have. That reminds me, I better
send the check for the W1AW endowment fund.
>
>Give the exact dollar amounts, say from the 2001 tax returns.

Why? You can't even understand that Amazon isn't making a profit.
>
>Is the ARRL BoD paid a salary?

Nope.

>Don't they do their thing and
>travel to various meetings (supposedly paying their way, etc.)
>out of the "goodness of their hearts?"

Their expenses are reimbursed, within limits. Their time is not. Paid staffers
like W1RFI and KE3Z do not make policy.

>>NCI membership requires a loyalty oath. ARRL does not.
>
> <insert about 30 minutes of "BWAHAHAHA" guffawing here>
>
>Of course, each and every 4300+ members of NCI had to be in

>blood oath under muerta or something. Yes, and we all wear
>black suits with black shades, carry alien firearms, make movies
>under surnames of "Smith" and "Jones." Of course.

You're being Extremely Literal again.

Could I be accepted as an NCI member even though I want code testing to remain?
Nope. But NCI members could join ARRL, whether or not they agree with ARRL
policies.

A COMMERCIAL radio license does not allow the holder to operate an amateur radio station.

>Explain why a valid amateur radio license is "necessary" to post on
>any subject regarding GETTING INTO amateur radio.

It's not necessary at all.

However, it is interesting that someone who claims to be interested in "getting into" amateur radio, and who has posted voluminuously here for years, has not

acquired ANY class of amateur radio license. It's even more interesting that a person who claims to KNOW others' motivations never reveals his own motivations.
>
>Note: This is an UNmoderated newsgroup.

>> and retuning for the one or two VHF ham-band channels it would be
>> limited to

A real killer. Xtals that will work are expensive and hard to find unless you
are really, really lucky.

>> you can buy a fully synthesized 2-m transceiver weighing
>> a lot less, a lot smaller, wuth loads of features that the old stuff
>> doesn;t have, and using a lot less primary power.

Yup. Lots of good used 2 m ham gear that will do the job for less than the
price of a full set of xtals.
>>
>> Use them for land-fill.

Better yet, tear them down for the parts and tubes. Some nice connectors and
other goodies are easily salvaged.

Keep the lead (solder) out of the landfills.

The most common ham use of those old sets was for repeaters. Just retune,
recrystal, get a duplexer and build an AC power supply and a control system.

>>written decades ago for a now-defunct magazine.
>
>Magazines. Plural.

Amateur radio magazines? I think not.

> Microcomputing bit the dust, I think.

Defunct.

>BYTE
>is still in Peterborough and selling ads like there's no tomorrow.

Amateur Radio magazine? I think not.

>I don't know what happened to Call-A.P.P.L.E. other than that
>Washington organization dissolved.

Defunct.

>Well, you can count RCA Corporation as "defunct" I suppose. :-)
>They got sold to General Electric and GE sold out parts of it to
>other companies. There went a bunch of technical reports and six
>programs of mine in the Central Engineering Software Library.

That's nice. What's it got to do with amateur radio or amateur radio policy?

>I doubt you will accept publication in the SAS in-flight magazine
>under a pseudonym.

How do we know it was you if it's under a psuedonym?

> Those are non-radio humor pieces and you
>don't seem to understand much humor in here. :-)

When you actually write something funny, I'll let you know.
>
>>>>So you claim. But you have very little experience in amateur radio. You
>>>>have
>>>>no experience whatsoever as an amateur radio operator.
>
>Yes, Mr. Einstein, no unlicensed-in-amateur-radio person will have
>much experience legally operating a radio in the amateur radio
>service!

Well, there you have it.

Yet you want to lecture all of us on amateur radio policy. How odd.

>I can truthfully say that I have NEVER operated on the amateur radio
>bands without a fully-licensed, vetted, a-number-one, ichi-ban amateur
>radio licensee!

Which means you have almost no experience.

>It should also be pointed out while you are busy pointing fingers that
>EVERYONE before they were licensed in the amateur radio service
>did not have any amateur radio operating experience.

Nope. Only those who lecture endlessly about amateur radio policy with no
experience in the ARS at all.

>The unfortunate (for you) situation is that I HAVE had a fair amount
>of radio experience in operating as well as maintaining, tuning,
>measuring, designing, testing them since 1953.

But not as a radio amateur. Your claimed experience has no relevance to amateur
radio policy.
>
>>Nope. The FCC makes the rules, and to them, "operating an amateur radio
>>station" has a very precise definition. Your activites do not meet that
>>definition. The simple fact is that you have no experience whatsoever as an
>>amateur radio operator.
>
>De jure, not de facto, Sherlock.

It's a simple fact. You keep telling us all about your professional experience,
as if that is somehow applicable to amateur radio policy. It isn't.

> Nearly all of my radio experience has
>been as a PROFESSIONAL.

So?

>I wasn't talking about operating as an amateur, Sherlock.

I was.
>
>I've been trying to talk about GETTING INTO amateur radio via the
>TEST REGULATIONS.

Really? Your posts wander all over the map, and are full of name-calling, long diatribes about your professional and military history, lots of abuse of retired State Department employees and ARRL staff, and general mayhem.

Meanwhile, you have not obtained an amateur radio license of any kind. A person who was really interested would have done so long ago.

When somebody does try to talk to you about the test regs, you bite their head off at the first disagreement. Or you ignore the subject - such as what problems the licensing of young people has allegedly caused in the ARS.

>The morse code test. The TEST.

Have you ever tried to take that test? Ever tried to learn the code?
>
>ITU-R S25.5...eliminate or re-write to delete the international
>recommendation of morse code testing for an AMATEUR radio
>license.

I'm not in charge of that. Neither are you.

You're obviously not interested in getting a ham license at all. You'd have gotten a license and set up a station over a decade ago if you were. Or is it really all about DX on HF to you? Sure seems to be.

>>>occupied the entirety of a small airfield. It took a Battalion to staff
>>>everything. I'd say it was the "big leagues." :-)
>>
>>Of course you would. You did it, therefore it must be Important ;-)
>
>"I" didn't say it was "important," the Chief of Staff of the United States
>Army said the work of the 8235th was important enough to give the
>unit TWO Presidential Unit Citations...for the work we did after the
>formalized truce in Korea in July 1953.

That's nice. Congratulations.
>
>From what experience can YOU judge the US military, Jimmie?

From history. Is it forbidden for me to speak of such things? Is free speech somehow applicable to you but not to me?

>Old 1960s anti-war Vietnam propaganda?

Did you ever go to Vietnam? Ever fight there?

Ever go to the Vietnam Memorial in Washington, DC? Lot of names on that granite.

Many veterans who served in Vietnam think the war was a terrible mistake. Think about what former Secretary of Defense Robert McNamara had to say some time

back about Vietnam. Were they driven to think and speak that way by "anti-war Vietnam propaganda"? I don't think so.

>Why do you want to spit on US military veterans?

I don't spit on anyone. Show us where I've done anything like that. Convince veterans like K4YZ and K8MN that I'm anti-military in any way. I don;t think you can.

Why do you want to spit on US radio amateurs who disagree with you?

>>>I was using "standard phonetics" in 1955...when the US military
>>>converted to the NATO Phonetic Alphabet, which was quickly
>>>adopted by the ICAO the same year. Not a problem. Minor
>>>memorizing and being careful not to use the old set. :-)
>>>
>>>>Are you against amateurs having standards?
>
>I'm against some amateurs spitting on US veterans.

Show us where that is happening - if you can.
>
>>How do you mean? What "standards and practices" of 1932 are you referring
>to?
>
>Of the ENTIRE 1930s.

You weren't even around for the entire 1930s ;-)

> Such as "CW gets through when nothing else will."

Where have you ever seen me write that?

> A phrase fine for the 30s.

There are times when "CW gets through when nothing else available will". Simple fact.

>[expletive deleted] jingoism in this new
>millennium.

Do you have a better idea? Let's see it.

>The NTS is another, like it is a "needed by the nation"
>sort of "emergency communication system?" Pfui.

Do you have a better idea? Let's see it.

NTS is not primarily an emergency network.

>>>>>I have no idea what that is supposed to mean.
>
>It is time you started understanding.

Then explain, instead of editing out the original phrase. And you are not the boss in here. You don't set the standards of the ARS and you don't give orders.

>You don't boss the US ARS because
>you have 32 yarns as an extra or a swelled head (or whatever is swelled)
>because you want to be a real old one-by-two "expert."

I don't claim to "boss" anything.

You don't boss the ARS around, either. Nor do you have any authority over US radio amateurs. Live with it.

>Get with the program.

What program? All you do in here is tear things down. You don't tell us of a new vision for the future, or new ideas, just endless diatribes about the past.

>It's a new world with new people with new ideas and willing to try
>something new.

Like what? What are YOUR new ideas for the future of the ARS? An age requirement of 14 years for all classes of license is the only one I've seen. It's a really, really terrible idea - unless someone wants to damage the ARS.

S25.5 will very probably disappear at WRC 2003. FCC will very probably dump Element 1 shortly thereafter. There will be some moaning and groaning but the FCC will say, in effect, 'that's that, get on with it'.

What are YOUR new ideas for after that happens? Revoke the licenses of every ham under 14? I think you'd like that.

I recall a regular poster here who used to regularly lecture us with how 'backward' ham radio was technically, and how the code test was holding ham radio back, yada, yada, yada. Focus on the future, etc. Wasn't ever going to change his call, either.

Then Restructuring happened and he went from Tech Plus to Extra. Soon after, he was working DX on HF SSB. Then he traded in his 2x3 call for a 2X1. Nothing wrong with any of it but it sure was a bit surreal. After all the preaching about "new modes and new modulations" and 'technical progress' he's working on DXCC using SSB and a manufactured transceiver. Doing pretty good, too.

>I could care less if you are a fortysomething trying
>vainly to be an eightysomething revered amateur guru.

Yeah, right. Show us where I have "posed" as anything other than what I am.

How does knowledge of amateur radio's past make me 'eightysomething'? Perhaps the fact that I have much, much more amateur radio experience than you causes you to see me as an elder.....;-). The possibility that I may have more knowledge of amateur radio history than you obviously makes you very, very angry. Too bad - grow up and learn to live with it ;-)

You're the one who has changed screen names several times in an apparent attempt to hide your identity. Nocwtest, Lenof21, Lenover21, AveryFine, AveryFineman, and probably some others - all with AOL. Interesting.

Now please explain to us how the licensing of young people has caused problems for the ARS which are so serious that an age requirement of 14 is needed.

>
>Actually, I don't give a gas-pass in a hurricane about what you do..

Yes, you do. You're obsessed by it. You keep demanding to know my employment,
even though it's irrelevant to amateur radio policy.

>you are
>AFRAID to reveal your employer's name and work assignments because
>someone might poke fun at it. :-)

Not afraid at all. I know you will ridicule it, and me. That's what you do.
It's what you've done to several others.

Besides, you have not demonstrated an adequate 'need to know'.
>
>>>To you they are a BIG THING.
>>
>>To many people they are "a big thing".
>
>Absolutely. However, they don't have much to do with radio or
>communications, do they?

They have lots to do with "radio and electronics", which is the subject under
discussion. See the thread title.
>
>>Judging by your behavior on this newsgroup, it must really bother you that I
>>have some knowledge, skill and experience in the field of "radio and
>>electronics" that you do not have. Poor baby - live with it.
>
>Have you any job references to all that "skill and experience"
>to share with the group?

There you go - demanding to know my employment, even though it's not relevant
to amateur radio policy. Yes, I have job references. No, I'm not going to share
them with the group, or you. Live with it.
>
>So far you've failed to identify your employer and failed to identify
>a general field of work...other than "knowledge and skill" on PLCs.

As I have said before, I'm an EE (BSEE and MSEE degrees, from Penn and Drexel,
respectively) working in electrical engineering. That's all you need to know.
Even that is not really relevant to a discussion of amateur radio policy.

>>Been there, done that, freshman year EE stuff.
>
>No doubt you can do 1972-level programming, a la "freshman
>year" stuff.

That and a lot more.

> This is 30 years later and I doubt you can handle
>any version of C (now the industry standard high-level
>language), but you can read old student texts, quote them and
>astound your friends and neighbors who've never programmed.

Nah. That's old stuff.

Of course it's almost funny to read this sort of stuff from somebody who had to expressmail his comments to the FCC instead of filing electronically, because he couldn't figure out the ECFS system. And who just recently unintentionally spammed this NG with posts containing no new content due to software troubles. And who sent a document scan that took up almost 2 meg - zipped!
>
>Have you ever had any program of any kind in large corporate
>use?

Oh yes. ;-) Most of them are in use 24/7.

>>What does any of this have to do with the fact that you cannot program a
>>PLC?

>PLCs aren't used in radio or communications.

The subject is "radio and electronics". PLCs do have radio and communication applications. Use your imagination and figure some out.

Here's a hint: It's often less expensive to use a COTS PLC that's easily programmed and has rugged hardware rather than develop a custom control system around a PIC, PC, or other technology that requires lots of development.

Yeah, unfortunately in the regards of the lack of USB ports, it blows major chunks. As far as everything else it seems to work just fine. Allows me to do a variety of different things with it in my free time and also when I take it to work every night. That is how I read these newsgroup messages..... just download 'em and read them offline. I am also working on scanning about 7000 pictures here over the summer and have about 3800 done so far, since I started in June. Gotta love the super slow summers at my place of employment.

I guess the solution would be if "coders" hate "no-coders" so bad, then
don't talk to them on the air....

Hmmm.... then all you would have is "coders" communicating with "coders"
only. Only problem with that is that after a certain point, "coders" will
have QSO'ed with all the other "coders" and will have run out of new
contacts. As well as them dropping from the ranks due to old age, heart
attacks etc., those numbers would continue to drop from year to year.

I guess that is what is pissing "coders" more than anything. They want new
QSO's for "the log" and with some of these "no-coders" not automatically
becoming "coders" then they will not have anyone new to QSO with. Maybe
that is what has crawled up their proverbial "butt."

Purely speculation at this point....

Hmmm... first off, if a tornado, for instance as stated earlier in the thread, hits where I live, I do have feet and can walk anywhere I want in our county or most others that I would be traveling in Michigan and reach a civilized area where there should be others that may be able to assist me within 1-3 hours. If I am in a physical condition that prevents me from do that, then I believe that tending to my injuries would be paramount to "McGuyer'ing" up a transciever (not just a transmitter but a reciever too none-the-less) after the whole residence that I was staying in was possibly destroyed. This is assuming that every possible part necessary to build a functional transciever (cw or not) are still intact after being spread out by a tornado.

What other examples, as you state "There are many others.?"

Yes... and that is probably true, but from the analogy presented earlier,
what are ya gonna do if that junk box is spread out in a fashion typical of
what most tornado's do as well as the rest of your house, as stated earlier?

Just a thought...

>
>Oh, yes, three and a half years ago I was "depriving young people"
>from becoming SIX YEAR OLD HAMS after kindly old VEs had
>"passed" them in testing.

You were, and are, still trying to do that. Your demand to the FCC for an age
limit of 14 would stop more than just a few six year olds from getting
licenses.

Do you have any evidence that the six year olds did not meet all of the FCC
requirements? Remember, comprehension of the material is not required.

>You "conveniently" left off the reason I gave to the FCC on WHY
>I made that, didn't you?

Why don't you refresh our memory? The only "reason" I've ever seen is the simple fact that two six year olds earned licenses. How that equates to a need for an age requirement of 14 has not been explained.

>You were so eager to make your attack
>that selective editing was your weapon of choice.

Wonder where he learned that?

What IS your reason? You've been asked many times, but nothing is forthcoming. Perhaps you are so angry because Hans hit on the real reason: You want to cut off a supply of new hams, so that the number of hams drops and the average age rises.
>
>Okay, since then, US amateur radio has gotten a NINE YEAR
>OLD AMATEUR EXTRA. Aren't you thrilled?

Actually, there was an eight year old Extra, back before restructuring. That meant passing 20 wpm code and 5, count 'em, 5 written exams. I've worked that young ham - on 20 CW. Good operator, interesting conversation.

What's the problem? Are you jealous?
>
>How does it feel to be compared to a NINE YEAR OLD?

Why does it matter? If I run a marathon, and a nine-year-old runs a marathon, my accomplishment is not diminished.

Ah - maybe that's what this is all about. You told us back on January 19, 2000, that you were going for Extra "right out of the box", but it hasn't happened yet.
More than two and a half years ago. But if you actually went and did what you said you were goin to do, anyone could point out "yeah, so what, an 8 year old did it before restructuring".

Why do you hate young people so much?

>After your ranting and shouting in here on that "terrible" suggestion,
>I simply dropped the age thing.

Where did you "drop it"? Did you write the FCC and retract your reply comments? (FCC classified them as reply comments, by the way).

Or did you simply wish them away, because you have no solid reasons to back up your demands?

Do you hereby disavow your earlier demands for an age requirement and admit to being mistaken, in error, incorrect, and just plain wrong about the idea?

> Everyone was all set to do lynching
>under the emotional heat of sub-teeners so I dropped it, but some
>latter-day sub-teeners want to make like outraged little league
>parents now and then.

Poor baby. Can't you take any negative criticism? Must everyone tiptoe around your sensitive feelings, while you savage theirs? Sure seems like it.

A "lynching"? Was there a torchlit mob coming down Lanark Street with a rope?
I don't think so.

>I'll put you down as one of those little kids.
>
Can't you take a little tweak?

>I'll just read in Newsline that US ham total population has stagnated
>for two years...even while this "educational resource" went not far
>with NO age limit.

The US amateur radio population grew about 8000 in the past 2 years. The Newsline figures you read are for all amateur licenses, not just those held by individuals. The number of individuals with US amateur license has grown by at least 8000.

Quite clear what your goals are.

It doesn't upset me in the least that a nine-year-old holds the Amateur Extra. From your comments, it would appear that it bothers you. Do you have yours "out of the box" yet?

Your "I simply dropped the age thing" is amusing. It appeared in your comments. I didn't noticed any amended comments. I don't recall you making any earlier "I simply dropped the age thing" comments here. Oh--you mean you simply dropped it right now?

I don't recall signing a contract and certainly don't recall any portion
of my oath dealing with my off-duty time, amateur radio or DXCC.
Say--what did you sign up for anyway? It sounds an awful lot like a
religeous cult.

> Did you join the AF to
> avoid the draft?

Are you nuts? I served for double the time and still went to Vietnam.
I know draftees who never went to 'nam. What does that have to do with
whether your Somalia QSOs counted for DXCC credit?

> > > > Have you asked anyone at the DXCC desk?

deployed area.

We weren't discussing airmen. We were discussing whether your
commander's authority extended to issuing amateur radio licenses and
whether your Somali QSOs were accepted for DXCC credit.

Certain of what--that it was supposed to be a secret or that you
contacts were accepted for DXCC credit? You've been telling us that you

don't know about the latter.

> > > > > If there had been a Ministry of Communications, like the places you

Oh, there was a host country. There just wasn't any civil government.
Drop the DXCC desk a note and ask.

> Oh Omniscient DXer Supreme, how do the others do it?

Drop the DXCC desk a note and ask them.

> > > They have no authority over

I dunno, Brian. Why not drop the DXCC desk a note and see what they
consider acceptable?

> And how does the next guy do it? Is the DXCC desk arbitrary?

I think the DXCC program attempts to be as fair and equitable as
possible. Why not drop the desk a note and ask about it?

> > > > > Thus, no amateur operation from Somalia can be legal?

...and probably was. Such an agreement is between the two countries for
legitimate amateur radio operation.

> I did have to report all communist contacts to the AF Office of Special
> Investigations even though my license had nothing to do with America or the
> Air Force.

You're kidding! I think you read some additional requirements into the
regs. While state had a "contact reporting" requirement and had a
travel restriction in those days which stated that I could not travel to
"bloc countrries" unless accompanied by another cleared American, the
reporting policy did not apply to amateur radio contacts. I know this
because I queried Diplomatic Security. If it had not been the case, DS
might have had to hire more help just to handle my CQ Worldwide Contest

bloc QSOs. I can see them trying to analyze, "599 16" from a Ukrainian
and my "599 15" reply.

> On Guam, a USA Posession, I merely had to sign Stroke KH2 per FCC
> regulation. Same procedure for AFOSI.
>
> Somalia was different than either. I didn't have a manual on what to do
> from a country with no government. So when all else fails, you ask
> your commander.

...and if he doesn't know anything at all about amateur radio, he might
say, "Well hell yes, Brian--go ahead". Under those circumstances, the
DXCC desk may or may not accept your operation for DXCC credit.

What is really a hoot here is that Brian took the "high moral ground" wrt your operating legally in band to work French stations on 6 meters. At the time, we didn't realize that Brian was advocating that you just set up shop in another country without the benefit of any approval from anyone in authority in that country (a polite way of saying "bootlegger") and work all comers on a frequency that you didn't have any right to use.

No wonder he keeps obessing about double standards.

The other side of the coin is that there are 18 wheeler road warriors
who are licensed hams running in trucker's nets on 20 & 75 ssb and
they're quite active. A buddy of mine is one of 'em, he oscillates
between north Jersey and Jacksonville and runs a 706 into a
screwdriver on HF. He has *eleven* antennas on the truck. At the
bottom of the list of permits & registrations lettered on the side of
the cab (USDOT 345678, etc.) is "FCC N3MEP". Overall they're not quite
right people.

BWHAHAHAHAHAHAHAHAHAHAHAHA!!!!

July 11, 2000

CERTIFIED MAIL--RETURN RECEIPT REQUESTED

Mr. Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

SUBJECT: Amateur Radio license KC8JBO

Dear Mr. Wiseman:

Pursuant to Section 97.519(d)(2) of the Commission's Rules, 47 C.F.R. Section 97.519(d)(2), the Commission has the authority to re-administer any examination element previously administered by Volunteer Examiners (VE's). The Commission may either administer the examination itself, or under the supervision of a Volunteer Examiner Coordinator (VEC) or VE designated by the Commission.

Accordingly, we are requiring you to re-take the General Class Amateur Examination, (Elements 2, 3(A) and 3(B)) under the supervision of an American Radio Relay League Volunteer Examiner Coordinator. This examination must be completed on or before September 11, 2000. The required code speed that you must demonstrate is 5 words per minute.

Please be prepared to verify your current address and to present a photo identification. Pursuant to Commission rules, your license will be cancelled if you do not appear for re-examination. You will be granted an Amateur Radio license consistent with the elements you pass upon re-examination.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio

Enforcement Bureau

Looks like you can't even cut and paste without fucking it up.

2975. ARRL Members -- protest this action to your director

Below is an excerpt from the minutes of the July BoD meeting. As threatened earlier, and by unanimous vote, the Directors have decided to remove the minutes of the ARRL BoD from QST.

Maybe even more telling, they have quietly removed the words "Official Journal" from the cover of QST. Isn't that interesting?

&#65533;&#65533;&#65533; 73, de Hans, K0HB
SOC # 291 http://www.qsl.net/soc/

51. On motion of Mr. Johnston, seconded by Mr. Bellows, it was unanimously VOTED that in By-Law 33 the words "publish them in QST" be replaced with "make them available to members." The first two sentences of By-Law 33 now read, "The Secretary shall record the proceedings of all meetings of the Board and of the Executive Committee. He shall promptly furnish copies of the minutes of these meetings to all Officers and members of the Board and make them available to members."

I think you are the ONLY person I know of that actually reads those minutes.
As long as they are available, I see no problem.

As to removing the phrase "official journal of the ARRL"....why did they do
that? Is it no longer the 'official journal' or are they finally admiting
that all it really is is a platform for advertisers and some idiotic
articles. Boy the old QST had a bunch of decent articles. Not any more,
and not for a long long time.

Guess the board, in its infinite wisdom, decided to stop the sham.
Especially since they have removed the only 'official' thing in the rag.

Don't get me wrong. I still think the ARRL has a place in ham radio.
Heck...I'm a lifer. But that don't give them the rite to ruin what used to
be a decent magazine.

Perhaps that is why I subscribe to CQ and CQVHF...what you think?

There is a lesson there, Jim. Just the same as no job is too hard for
the person who does not have to do the work, and people without children
can give much sage advice on raising kids to parents, it is often much
easier to criticize ham radio (or pick the field) from a position of ignorance.

Well, it appears I owe the editor/publisher an apology. My June copy did
not say "Official Journal of", but on further examination, those words have
returned on my August copy.

At the risk of cranking up the "California Crank", I've already expressed my displeasure over the removal of "Section News" and the contest line scores from QST to President Haynie, Director Bodson, the Roanoke Division Vice Director with an info copy to WV SM KC8FS. Our SM polled WV amateurs and got an overwhelming response for keeping "Section News" in QST. Even he was taken by surprise by the news of the contest line score removal.

I'd addressed the subject of "Section News" with Director Bodson immediately after it was initially brought up. He told me to relax and that the issue was tabled for further study. According to recent material issued by the League, the six months was to give members "time to adjust" to the change.

Great Lakes Director Geo. Race and at least one SM have already resigned over the issue. As for me, I'm no longer going to participate in any ARRL contest and I will no longer donate any funds to the ARRL. I also plan to either run against Bodson or support a candidate who runs against him in the next Roanoke Division election.

I pointed out to Haynie that the internet can be a two-edged sword and that I hadn't, at that time, brought the issue up here. His reply was condescending and dismissive. At one point, he wrote: "Yes, and I do read some of the post. I think that QRZ has the best forum and I do read it on a daily basis and have even posted there on several occasions.

r.r.a.p. has degenerated to the point that (I went there today) there is nothing useful there that I can see that even has the remotest relation to amateur radio." I can tell that he is a busy man because he added, "Last, it has taken over an hour just to write this, four phone calls two of which were from Washington having to do with amateur radio. So, I need to get back to work.

Removing the board minutes is just another reason to get involved.

I'll continue to play in our League radiosport events, and I'll continue to provide financial support.

I will also continue to voice my opinion on issues that concern me. First and foremost, we are a radio club, and the club journal ought to first report on issues related to the club, the activities of it's membership, and the actions of our elected leadership.

> I also plan to either run against Bodson or support a candidate who runs

Been there, done that, and maybe it's time to do it again.

I agree with you on a lot of what you wrote.

But I also agree with Mr Haynie on his quote. Like it or not, rrap is becoming irrelevant to ham radio policy (this thread being a notable and lonely exception)

Most of the messages are one person insulting another, even if the message is somewhat relevent. But unfortunately most of the messages are not relevent to the ARS and policy. Just clashing personalities.

But even this thread will likely take the road to perdition after a few more posts.

I would encourage posters here to decide if they want this group to be their little playground where thay can fight with each other and call each other names, or if they want to have the group actually mean something.

So are you, Dave. Ever vowed to extract revenge on someone and felt differently the next morning? Do you carry through on your revenge just because you vowed to do so in a moment of irrational emotional weakness?

Well, someone earlier suggested an automotive battery with a file connected
to the negative terminal and a long-wire antenna connected to the positive
terminal. Raking the end of the antenna wire along the file will allow one
to transmit a Morse code SOS on virtually all frequencies at once. :-)

Source record: 50961

In article <20020805040728.27667.00000229@mb-mw.aol.com>, Judge Jimmy,
attempting to hide in justice robes, went on Court TV and performed:

>That's nice. What's it got to do with amateur radio or amateur radio policy?

What did the 1965 motion picture "Flight of the Phoenix" have to
do with radio or communications? You HAD to comment on it
but were incorrect in your statements. You were corrected.

What does PLC programming have to do with radio or
communications (including amateur radio)? Oh, yes,
you claim to do that and you are a licensed radio amateur
so therefore it is "applicable." Of course. :-)

What does the business condition of Amazon.com have
to do with amateur radio or amateur radio policy? You
have dwelled on that extensively.

You have, in the past, made many mentions of an
unverified "MV Oak" sinking on a New Year's Eve of
more years ago and being "rescued via CW."

>How do we know it was you if it's under a psuedonym?

I will scan the honorarium letter and send it e-file. :-)

>When you actually write something funny, I'll let you know.

Here's laughing at you, kid... :-)

>Yet you want to lecture all of us on amateur radio policy. How odd.

Oh? Ah...strong advocacy of no morse code test in US amateur
radio is "lecturing all of you on amateur radio policy!" :-)

Yes...objecting to some opinions of long-time hams exhibiting
Class A personality traits is "lecturing all of you on amateur
radio policy!" :-)

Not odd. So many of you have imagined all of amateur radio
in Your Image therefore any negativism against any one of
you is a "slap at all of amateur radio!" :-)

>But not as a radio amateur. Your claimed experience has no relevance to
>amateur radio policy.

Then the FCC has "no relevance" in SETTING radio regulations
because none of the commissioners or staff have to be licensed
in amateur radio or have experience in it.

You can't have it both ways.

>It's a simple fact. You keep telling us all about your professional
experience,
>as if that is somehow applicable to amateur radio policy. It isn't.

Not under Judge Jimmy, true. :-)

I just mention some of what I've done. Not claims, verifiable
fact. Radio physics are the same in any radio service,
regardless of man-made legislation to make them "different."

You keep telling everyone that PLC programming is essential
radio and electronics knowledge yet you have NOT given any
evidence of bona fide applications which are verifiable by
anyone else.

>>I've been trying to talk about GETTING INTO amateur radio via the
>>TEST REGULATIONS.
>
>Really? Your posts wander all over the map, and are full of name-calling, long
>diatribes about your professional and military history, lots of abuse of
>retired State Department employees and ARRL staff, and general mayhem.

I said I've been TRYING to talk about getting into amateur radio.
Under the obstinacy of the injured-pride long-timers furious at
invaders of their sacred domain, I seem to be spending 95+%
of posting defending all the received name-calling, long diatribes
of glory and honor in hamdom, abuse from a retired State person,
and general mayhem of their origin.

Problem is, all those severely-pride-wounded long-timer hotshots
didn't realize that they aren't bullet-proof. They are all virtual
Burger King addicts wanting things Their way. Not my problem.

>Meanwhile, you have not obtained an amateur radio license of any kind. A
>person who was really interested would have done so long ago.

Oh? :-) It wouldn't have made any difference, would it? :-)

Judge Jimmy just can't accept opposite opinions without
commenting on the person of the commenter. A license for
the purpose of discussing things is really irrelevant...except
for use as a pseudo permit to write.

>When somebody does try to talk to you about the test regs, you bite their head
>off at the first disagreement. Or you ignore the subject - such as what
>problems the licensing of young people has allegedly caused in the ARS.

Now, now, you are resurrecting a dead horse once again,
futily beating it to prove you are "right" all along. You created
several strawmen. I explained my statements on the comment
to the FCC in the statements to the FCC some 3 1/2 years ago.
You did not comment on those then but only chose to bring
them up as a way to win message points to somehow prove

you are "right."

All you do is demonstrate necro-equine flagellation all over again.

>Have you ever tried to take that test? Ever tried to learn the code?

Irrelevant except for you to use answers in a ridiculing manner.

Prove to the FCC that a morse code test is essential to being
licensed as a radio amateur. They grant licenses, not you.

>>ITU-R S25.5...eliminate or re-write to delete the international
>>recommendation of morse code testing for an AMATEUR radio
>>license.
>
>I'm not in charge of that. Neither are you.

Why does someone have to be "in charge?" ANY citizen can
COMMENT on that. The US adminstration has already established
its position (including textual changes) on all matters concerning
the up-coming WRC-03.

Only the US adminstration has any vote on those matters. ARRL
can't vote. N2EY can't vote. The "US administration" to WRC-03
consists of Department of State, NTIA, and FCC.

>You're obviously not interested in getting a ham license at all. You'd have
>gotten a license and set up a station over a decade ago if you were. Or is it
>really all about DX on HF to you? Sure seems to be.

Why is it necessary to "demonstrate motivation?" Why is it
necessary to demonstrate it to you? Who are you?

The FCC doesn't require a "demonstration of motivation." They
only specify the test regulations...which may be changed...and
they are the only ones granting licenses.

Does ARRL grant licenses? Does a Pennsylvania ham club
grant licenses?

>>From what experience can YOU judge the US military, Jimmie?
>
>From history. Is it forbidden for me to speak of such things? Is free speech
>somehow applicable to you but not to me?

Oh, I see. You "know" all about history from historical references
without having first-hand experience...yet you insist on "practical
experience" in amateur radio in order to discuss amateur policy.

Very clear. In other venues it would be called hypocrisy...or, more
familiarly, a "double standard."

>Did you ever go to Vietnam? Ever fight there?

Did you?

My Honorable Discharge was issued April, 1960 after 8 years of
military service.

>Ever go to the Vietnam Memorial in Washington, DC? Lot of names on that
>granite.

Nasty little remark there, non-veteran Jimmy.

I can show you two names of former classmates who died in
Korea...but those are on private headstones.

I can show you markers at the Fort Monmouth entrance road
(Monmouth is near your beloved "boss" home town) of those
signalmen who died in WW2 and Korea.

What is your point here except to arouse some emotional
whatever irrelevant to the subject? You were never in any
military service, never took that oath to defend the Constitution
of the United States as part of that military service.

>Many veterans who served in Vietnam think the war was a terrible mistake.

Well, then, you just go argue Vietnam policy in another policy
newsgroup. This one is about amateur radio policy, isn't it?

>Why do you want to spit on US radio amateurs who disagree with you?

I am not shy about speaking to individuals who claim to be
superior to me. If they also have amateur radio licenses,
that doesn't make them superior.

Superior types do not speak kindly to inferiors. They become
highly disturbed when their balloons of superiority are popped.

No problem to me. Balloon popping is a form of entertainment.
If your TS card needs punching, no problem, I'll punch that.
Been there, done that, have the reversible collar. :-)

>You weren't even around for the entire 1930s ;-)

I was born in 1932.

>Then explain, instead of editing out the original phrase. And you are not the
>boss in here. You don't set the standards of the ARS and you don't give
>orders.

Neither do you, Bruce. :-)

>You don't boss the ARS around, either. Nor do you have any authority over US
>radio amateurs. Live with it.

ARS can't take orders? Not even from the FCC?!? :-)

>Like what? What are YOUR new ideas for the future of the ARS?

...I'll write "my section manager" on that. :-) :-) :-)

>An age
>requirement of 14 years for all classes of license is the only one I've seen.

Get with the program, Bruce. Three and a half years ago there was
more. Why don't you beat that dead horse, too? :-)

>It's a really, really terrible idea - unless someone wants to damage the ARS.

You tellum, Bruce!

>What are YOUR new ideas for after that happens? Revoke the licenses of every
>ham under 14? I think you'd like that.

I think your arm is getting tired beating that very dead horse.

>Yeah, right. Show us where I have "posed" as anything other than what I am.

Heh...an eightysomething old-timer in a fortysomething body... :-)

>How does knowledge of amateur radio's past make me 'eightysomething'?

ATTITUDE. Air of superiority. Actually, you were much worse
on the AOL newsgroup, sounding more like a cross between
ninetysomething and old issues of QST circa 1920. :-)

>Perhaps
>the fact that I have much, much more amateur radio experience than you causes
>you to see me as an elder...

Others see you as an elder in the Church of Hiram. :-)

>You're the one who has changed screen names several times in an apparent
>attempt to hide your identity. Nocwtest, Lenof21, Lenover21, AveryFine,
>AveryFineman, and probably some others - all with AOL. Interesting.

"Apparent attempt to hide identity!"

Good grief, you create the flimsiest of strawmen to attempt an
attack on another!

Four years ago AOL accepted screen names with only 8 characters.
They did not accept duplicates of existing names or even the first
five characters which had a similarity to others already picked.
AOL permitted at least two other screen names (handles) for an
existing account. You were there, should know that...why do you
say it was all an "attempt to hide identity?"

Judge Jimmy hides his AOL bio. For a real name after his AOL
screen name he uses his amateur radio callsign...which is the
same as the screen name. :-)

My identity and mailing address has appeared inside thousands
of magazines for years, the same as what it is now. How is that
AN ATTEMPT TO HIDE IDENTITY?!?

Judge Jimmy is weird, maybe even wired...

2994. Re: Freebanders all over 10m like roaches

Newsgroup: rec.radio.amateur.policy
Date: 2002-08-05 23:06:00 UTC

Message-ID: <20020805190600.12758.00000249@mb-fz.aol.com>
Source record: 50958

In article <20020805040719.27667.00000220@mb-mw.aol.com>, Rocky, the
PLC-augmented morseman stumbled around the ring with his face looking
like an old Philly cheesesteak, tried to raise Adrian but only scribbled:

>>>One. Second Class Radiotelephone. I let it lapse.
>>
>>ONLY a SECOND?!? Oh, my, with all your smarts you
>>couldn't handle a FIRST?!?!?
>
>Sure I could. I had no need for it - that's why I let it lapse. I used the
>Second exactly once, then it sat idle.

Oh my, the great double-degreed Drexel grad couldn't sit around
another half hour to get the whole First? Tsk, tsk.

>"The Boss" is Bruce Springsteen. I don't claim to be him.

The Artists and Repertoiry newsgroup is down the hall, also the
Red Bank and Asbury Park better business bureaus.

I think you are trying to be a sly Stallone type for the old guard
in US hammy radio. :-)

>Nope. I'm simply pointing out yet another of your mistakes. Despite your
>claims, Amazon is not making a profit. They are deeply in debt and losing
>money like mad on an annual basis. Fortunately, their rate of losing money is
>decreasing. Hopefully they will become profitable soon - for more than one
>quarter, too.

Amazon hasn't yet filed for bankruptcy. If they make "no profit" then
they would have failed to pay their debts long ago.

Your critique of things rather outside radio or communications
seems based on incorrect "corrections" of others in areas
where those others know more about the subject than you do.

One example is motion pictures and novels of 35 years ago
where you made several incorrect statements.

Another example is that industrial electricity components are
"common" in radio or communications, yet have failed to
show any specifics of their applications (which no one else
has done).

>Sure I can. It's all about the FCC not being convinced that code testing
serves
>a regulatory purpose anymore, except for S25.5. I had my say, others had
>theirs, FCC made their decision. That's what it's all about. I'm not fixated

You are fixated on being "correct" in here. You reject corrections
of your own mistakes. Your self-pride is at stake here and you
wrongly believe some are setting fire to those stakes. You get
disturbed when others bring marshmallows.

>>Did you read ALL 2600+ DOCUMENTS?!?!?
>
>Many of them were duplicates. NCI did the survey - argue with them ;-)

An INDIVIDUAL did a "survey." It was put into the FCC database
as two comments. Read it for yourself.

>>No one need be an amateur licensee.
>
>So? The same is true of commentin to the FCC or joining ARRL.

ARRL does not accept VOTING membership from unlicensed
(as an amateur) individuals.

>>>>The ARRL claims to represent "all" of US amateur radio yet its
>>>>membership is less than a quarter of all licensed US radio amateurs.
>
>Where do they claim to represent ALL? You used quotation marks - where's the
>original statement you are quoting?

>>>NCI membership requires a loyalty oath. ARRL does not.
>>
>> <insert about 30 minutes of "BWAHAHAHA" guffawing here>
>>
>>Of course, each and every 4300+ members of NCI had to be in
>>front of a judge, raised their right hands, and swore to defend the
>>constitution of NCI or something. The secret is out. That was a

>
>You're being Extremely Literal again.

Poor baby. Got you upset again? :-)

Hello? I was being SATIRIC. Satire. Foolishness in prose to
show the idiocy of your "NCI takes LOYALTY OATHS" statement.

>Could I be accepted as an NCI member even though I want code testing to
>remain?

You can lie and play the secret agent, wear shades and a black
suit, have your picture taken in front of an FCC entrance.

>Nope. But NCI members could join ARRL, whether or not they agree with ARRL
>policies.

Three out of four US amateur radio licensees have chosen NOT
to join ARRL.

2995. Re: The Need for CW

Newsgroup: rec.radio.amateur.policy
Date: 2002-08-05 23:06:02 UTC
From: lenover21@aol.com
Message-ID: <20020805190602.12758.00000250@mb-fz.aol.com>
Source record: 50957

In article <20020805040710.27667.00000210@mb-mw.aol.com>, Rocky, thinking everyone who can't do morse and therefore everyone else is Bullwinkle, chanted the following in falsetto:

>In article <20020801201535.19202.00000132@mb-mt.aol.com>, lenover21@aol.com
>(Len Over 21) writes:
>
>>We could assume two vacuum tube broadcast band receivers
>>survived the disaster, that 115 VAC power was available, a work
>>area and hand tools were available, a soldering means was
>>possible and at least a battery-powered VOM also survived.
>
>Why does the VOM have to be battery powered if AC is available?

Why do you ask irrelevant questions about a hypothetical emergency? Almost every VOM has an internal battery for the "O" function from the venerable Simpson 260 to a digital John Fluke model.

>No imagination. Use the last audio stage as an oscillator tuning the same
>range as the receiver.

You do not get to specify who does what under any conditions in a disaster or emergency.

How does removing the audio stage of a receiver permit it to be used as a receiver after the radio is converted to a transmitter? Hint: Headphones are unavailable in this scenario.

How are you able to determine frequency of the transmitter without any external indication? Are you serious in thinking that an old, common BC receiver has an accurately-marked dial?

>Use the old audio stage as an oscillator, tuned by the old tuning cap and a
>new coil made from house wire. Unless you're on a desert island, there's wire
>around. House wire is good for antennas, too.

You do not get to specify disaster or emergency environments.

>A 50L6GT will do a couple of watts if properly handled. Voltage-double in the
>power supply if you don't like 120 volts.

There is no other diode. The 35 Volt filament rectifier common in "All-American Fives" is a single diode. Voltage doubling is not possible with a single diode.

You don't get to specify a tube line-up or even a general type of receiver. This was a hypothetical scenario and, as such, quite

unlikely in this new millennium.

Citing "it's possible" even when never being studied is an
incredulous statement. You are in a disaster situation of
unspecified environment and you want the time and freedom
to "study something" because you heard it was once "possible?"

>Don;t forget to make the IF stae in the receiver oscillate for a BFO.

Why? What possibility in the year 2002 or after remains that
anyone will hear your signal, send back in morse on your
mythical receiver to save your butt? A responding station
(if there was one) would be more likely to transmit back to you
on AM.

If you are such a good morseman, you don't need any BFO.
You should be able to hear the difference in carrier/no-carrier
from changes in receiver noise.

>Better yet, remove turns from the coils and move the whole mess up to the 80
>meter band.

So, in your modified scenario, an inductance testing device
survived through some miracle? In disregarding normal human
survival duties of securing food, water, shelter, you spent
months developing adequate test equipment from first principles?

>Easy. Just find some hams who know the code.

Sorry, all those died off in the disaster. You have to bank on
commercial maritime radio ops who survived on the Great
Lakes...hoping that they will hear you

>The lack of imagination on the part of Lenover21 is obvious.

The obstinacy of N2EY trying to win message points was
amply demonstrated. Zero points.

>With a little ingenuity, the audio stages of the first receiver can be used as

>
>No need for CW/Morse at all, in that case.

With no paper or writing instruments, (in addition to no other test
equipment) you can do all that in a few hours or even a few days
in a disaster or emergency environment?

Study this matter and write it up for some radio publication, show
how "experts" can do it in an unspecified-environment emergency
or disaster situation. For a true test, do it solely during Field Day
to demonstrate How It Can Be Done.

>That's true.
>>
>>The story hinges on the ignorant non-aeronautical readers and
>>audience keying to the depreciating "toy" or "model" aircraft.
>
>Partly true. Would YOU go along on the first flight of an aircraft designed
>by someone who had only designed model aircraft?

Given the only alternate of death from being stranded in a Libyan (or other)
desert, no problem, absolutely yes.

Why is there some question on the basic human need of survival?

>The story also hinges on the fact that the designer did not mention the fact
>that he designed model aircraft until the project was well under way.

That's what the novelist (Elleston Trevor) wrote. It is a work of FICTION.

There are other venues for discussing literary works or motion
pictures.

>>That is absolutely necessary to introduce conflict between
>>characters in the story, to build suspense.
>
>Not really - it just adds to it. Even if Dorfmann were an experienced designer
>of full-size aircraft, the Phoenix design would be extremely risky.

Oh, you are now an aeronautical expert, too?!?

In the fictional setting, the characters have a simple choice: Die or
try to get away by rebuilding the aircraft.

There is no "risk" element in survival. One either survives or one dies.

Tallmantz Aviation designed and built an experimental aircraft that came
close to the word picture of the fictional aircraft in Trevor's novel. It flew
well enough for photographic purposes. The crash was due to PILOT

ERROR.

Pilot Paul Mantz was NOT "retired" at the time. He was a business
partner with fellow movie pilot Frank Tallman at the time and their
museum at (then) Orange County Airport was a going concern,
recently opened.

>>The character of
>>Dorfmann tries to explain that aeronautical principles apply to
>>big aircraft the same as little aircraft...which pilot Frank (James
>>Stewart) doesn't believe at all until the end of the movie (see
>>final scenes of survivors Frank and Heinrich walking together

>
>Incorrect. Frank Towns knows the THEORY is the same. It's the PRACTICE that
>he is concerned with.

You are welcome to rent or buy the VHS videotape, skip to the end
scenes, and find out my paragraph is correct.

I never met any "Frank Towns" or even author Elleston Trevor, did
not discuss "motivation" or "theory" with either. Did you? :-)

>>There is a parallel with the fiction of "CW is necessary in a
>>test because a simple radio could be constructed in the
>>event of a disaster." It is myth, fiction, an often-told tale
>>which has no basis in reality.
>
>The idea that the TEST is necessary for all hams because that situation might
>arise is possible, but it strains the imagination because it is so unlikely.

The morse code test is a holdover in government regulations, put there
in the beginning of radio regulation because manual telegraphy was the
only practical means of communication in early radio. Government
regulations are not, should not, be based on imaginative pipe-dreams
of rescue by means of morse code.

>But there have been cases where a simple CW/Morse transmitter was built by a
>ham under disaster conditions and used for emergency communications, saving
>lives. These examples are not legends or myths but documented events. Here's
>a hint: W9MWC
>
>Trouble is, they are documented events of 60-plus years ago.

Where is this "documented?"

"60-plus years ago" would make it earlier than 1942. At that time all of
radio was only 46 years old. This is the year 2002 and all of radio is
108 years old. Radio is much changed in technology over six decades.
Myths and legends are seemingly immortal in the imaginations of
those who have to live in a world of myths and legends.

>Except that it's not a myth at all - it has happened that a CW/Morse
>transmitter constructed under disaster conditions was used for emergency
>communications that saved lives. A long time ago. But it DID happen.

If that situation is "documented" in an ARRL publication, are there
sufficient footnotes to ascertain this fact? Or are we all to Believe it
because the ARRL said it did, without question?

>It's an opinion question, and opinions differ. My opinion is that the
>probability is so low as to be negligible. But I could be wrong.

You have opinions on many things, including PLCs as being directly
applicable to radio and communications. Please provide a list of
actual applications of PLCs to radio or communications and their
advantages versus conventional methods.

In article <20020805040729.27667.00000230@mb-mw.aol.com>, Rocky the PLC-enabled

flying morseman sprints up the museum steps and, with a studio orchestra
off-camera,
exhultantly scribbles:

>>>>You probably work with PLCs and/or process control equipment, right?
>>>
>>>You are obsessed with finding out what I do for a living, even though that
>>>is irrelevant to a discussion of amateur radio policy.
>>
>>Actually, I don't give a gas-pass in a hurricane about what you do..
>
>Yes, you do. You're obsessed by it. You keep demanding to know my employment,
>even though it's irrelevant to amateur radio policy.

Anyone who is proud of their job and company will not hesitate to
mention their employer. Since you do not choose to mention it,
I'll have to conclude you are not proud...despite obvious pride in
claims of amateur radio hobby experience.

>Not afraid at all. I know you will ridicule it, and me. That's what you do.
>It's what you've done to several others.

Fear is fear. You do not hesitate to ridicule anyone with opposite
views, yet you fear a Revelation. <shrug>

>Besides, you have not demonstrated an adequate 'need to know'.

Have you demonstrated a need to crow?

[PLCs]

>>Absolutely. However, they don't have much to do with radio or
>>communications, do they?
>
>They have lots to do with "radio and electronics", which is the subject under
>discussion. See the thread title.

Only for electrical systems in industrial installations. You have not
demonstrated any applications of PLCs in radio or electronics.

>There you go - demanding to know my employment, even though it's not relevant
>to amateur radio policy. Yes, I have job references. No, I'm not going to
>share them with the group, or you. Live with it.

Fear is fear. You seem to live with it. Not my problem.

>As I have said before, I'm an EE (BSEE and MSEE degrees, from Penn and Drexel,
>respectively) working in electrical engineering. That's all you need to know.
>Even that is not really relevant to a discussion of amateur radio policy.

Why have you brought up your degrees so much if it was "not
really relevant?"

>That and a lot more.

Non-specific claims only.

>Nah. That's old stuff.

Non-specific claims only.

>Of course it's almost funny to read this sort of stuff from somebody who had
to
>expressmail his comments to the FCC instead of filing electronically, because
>he couldn't figure out the ECFS system. And who just recently unintentionally
>spammed this NG with posts containing no new content due to software troubles.
>And who sent a document scan that took up almost 2 meg - zipped!

That was 3 1/2 years ago and I followed the FCC instructions and options.

Are you now grandiously assuming "authority" on which citizen of the USA
can comment to his/her government and in what format, size, or contents?

You are being as childish in your ego-wounding as a nine-year-old.

>>Have you ever had any program of any kind in large corporate use?
>
>Oh yes. ;-) Most of them are in use 24/7.

Unspecific claims. No language, no application, no nothing.

>The subject is "radio and electronics". PLCs do have radio and communication
>applications. Use your imagination and figure some out.

The subject thread is NOT "applications of PLCs to radio (or communication)."

You've brought the sub-thread into some kind of arena where you want
to damn all those who do not honor and revere you for being a guru on
industrial electric applications.

Now you demand others perform tasks which have no relevance to
anything but your own claims...because your personal pride was felt
injured.

>Here's a hint: It's often less expensive to use a COTS PLC that's easily
>programmed and has rugged hardware rather than develop a custom control
>system around a PIC, PC, or other technology that requires lots of
development.

Please list a few typical prices of "COTS PLCs" which are commercial,
off-the-shelf" and how much programming is required to fit a radio or
communications application.

"COTS" is a military contracting term, applied to components which are commercial, off-the-shelf instead of special versions made to extra government standards or to specialized components developed solely for government use. PLCs are commercial items and may be obtained from distributors who carry industrial electrical system items.

A typical Microchip PIC microcontroller can cost only $5 in single quantities and the development software is free for download. Various application programs can be found on the web, beginning with links at the Microchip site. Such programs applied to amateur radio are available from the ARRL website or from individual radio amateurs who have developed them.

Please list the PLC applications to amateur radio that have been published by any amateur radio oriented publisher or organization.

Nahhh. 2x2 callsigns are for "advanced" class. Extras get 2x1
callsigns. And apparently anyone can get a "vanity" callsign of any
sort.

In article <3D4EDBA2.551605CD@psu.edu>, mike coslo <mjc5@psu.edu> writes:

> I would encourage posters here to decide if they want this group to be
>their little playground where thay can fight with each other and call
>each other names, or if they want to have the group actually mean something.

In any objective analysis and on a basis of the past four years of
messaging, this newsgroup should be changed to a moderated
one with strict access requirements.

This would do several things: Remove the cross-postings, of
duplicates from other newsgroups; remove the riff-raff of terrible
unlicensed individuals who have not shown sufficient motivation
to the group; ensure an elite enclave of regulars who all think
pretty much alike.

Works for me...

1. Many usenet users don't speak English as thier first langauge.
2. Many people with disabilities like dyslexia can not always spot that type of mistake.
3. All of us who are not perfect make typos, especially here where it supposedly does not matter.

I still won't work French Ops 200khz out of band, no matter what unkind
things you say about me.

At the time, we
> didn't realize that Brian was advocating that you just set up shop in

Ed, name one other country that you know of without a government!

IF there were anyone from the host country in "authority" then I would have
worked the licensing issue through them. But IF that were the case, we
probably wouldn't have been over there, the American Embassy would have been
in operation, and people probably wouldn't have been starving to death.

You and Bill Clinton obviously didn't understand the situation.

> No wonder he keeps obessing about double standards.

Ed, I don't "obese" about double standards. I merely point them out where
they exist.

Dave, please perform this simple task: Check with the ARRL about licensing
in Somalia. See what is now available almost a decade after we were there.

Apparently. I've got a butane soldering iron, and a cheapie RS 12DC soldering iron. As well as the usual 120V pencils and the big Weller.

> >There's no reason that soldering an 8-pin
> >microphone connector or a db-9 connector, and a pl-259 shouldn't be part of

Thats mostly what we do. This microphone to that radio, That tnc to this computer...

And RF connectors.

> Most hams would simply learn what was needed and pass the test.

Even if completely arbitrary and unnecessary.

Mike,

In this particular case and at this particular time, this forum has been
used to address an amateur radio policy matter. I'd hope that League
members would take time to make their views known to their directors and
to the League's president and executive vice-president.

In my case, Director Bodson issued a calming note speaking of the matter
being tabled for further study. If one reads the board minutes, it was
Mr. Bodson who brought the matter up for a vote. He had his mind made
up about the issue(s) and was not forthcoming.

Vowing revenge and storming out of a newsgroup in a snit can hardly be
considered comparable. Brian will have to learn to address his
emotional weaknesses.

Ryan, I got a stack of them at work for our field people. Personal opinion:
for field use, the connectors for the outboard floppy drive are flimsey and
easily broken and battery life is low. The "eraser" joystick is fast, and
the display is very nice.

If you aren't concerned enough to find whether your operation counts for
DXCC credit, why should I check with the ARRL about licensing in
Somalia? I'm not planning a trip to Somalia. Why? Does the League's
info suggest contacting your former commander?

Have you noticed any unprovoked instances of Brian Kelley calling names?

Richard,

Especially when they ran out of 2x1's and 1x2's a long while back in some
call areas like 4 land.

Without looking it up....what is a 1x3 W class of license?

> I would challenge the trolls to produce a DXCC award in let's say one
>month? Working with say 100 watts? After all, it is sooooo easy. Whattya
>say? Heck, I'll give them two months.

I will concede to not being able to do DXCC. (Try not to celebrate).. I do not have the equipment. Also, my kindred does not like me setting up antennas.

Like anything it involves practice, reading, and/or help from someone who has done it. The attitude of Hams seems to be that you must do it yourself. I have asked and very few have been willing to share their knowledge. I have had a few opportunities to set up antennas for Hams, but not much.

How about giving some examples of the skill involved, obstacles overcome, steps involved, etc.?

I do not enjoy the typical "Ham" type activities. Therefore, I do not consider myself to be a Ham. I observed HF contesting and for me it is boring. Seems to me just tuning the dial, calling CQ, then logging it in. Seems like the end result would be rather limiting. Amateur radio could be so much more.

Brian:

Apparently not. I did some research on it on the Internet, and discovered that the parent company reduced the individual Sambo's Restaurant manager's participation in the profit-sharing, thus causing an implosion of the whole chain. There seems to be a few Sambo's restaurant's still operating in California, from what I've seen.

Hmmm -- so the failure to follow the ICAO standard phonetic alphabet is a fault
which
can be ascribed wholly to US radio amateurs and to our "glorification" of CW.
Just out
of curiosity, "Chewie," how often have you heard US hams (or hams from any
other
country) spelling out letters phonetically? And what is it about CW that would
cause
US hams to incorporate non-standard phonetics into their phone operation?
Please
provide fully documented, authenticated, and readily verifiable proof. If you
cannot,
or choose not to, you're just another anonymous coward and liar, aren't you?
Not to mention the fact that you're full of Sugar Honolulu Istanbul Tangiers,
in addition to being a second-rate troll.

>They barbecue lobsters out in Arizona?

Not that I know of. Cecil was quite prepared to take me out for lobster, but, alas, my time was spoken for with various functions each evening. Cecil and I decided that under the circumstances, honor on the lobster-dinner wager would be well satisfied if Cecil bought my ticket for the BBQ and joined me for dinner. We sat across from Tuck Miller, the new SW Division Vice Director. A good time was had by all.

>IF there were anyone from the host country in "authority" then I would have
>worked the licensing issue through them.

Did you also do other things that would be against the law in "civilized"
countries while you were there because there was no one "in authority" to stop
you?

You were there under UN authority, were you not? The UN would have had the
authority to issue you the necessary operating permits. Had you secured them,
you would not have been bootlegging.

>and people probably wouldn't have been starving to death.

How many people did your bootlegging prevent from starving to death?

>Ed, I don't "obese" about double standards. I merely point them out where
>they exist.

Okay. Are you saying that working overseas hams on a frequency where one is
authorized to operate is not okay but operating without authority to do so is
okay? Is that the double standard you are pointing out?

I love these quizzes. During the period of a little more than a decade,
we've had quite a number. Bosnia, Kosovo, Sierra Leone, Liberia. If
you're speaking of DXCC entities, the list becomes even greater. Some
not only have no government, they don't have a population.

> IF there were anyone from the host country in "authority" then I would have

> probably wouldn't have been over there, the American Embassy would have been
> in operation, and people probably wouldn't have been starving to death.

People starve to death all the time in countries WITH a government.
The American embassies in Sierra Leone and Guinea-Bissau are closed
despite the fact that these countries have governments. Our embassy in
Bagdad isn't open. What do embassies and starvation have to do with
obtaining an amateur radio license?

> You and Bill Clinton obviously didn't understand the situation.

Bill isn't President and isn't a ham. If for no other reasons, we can
rejoice in these two.

> > No wonder he keeps obessing about double standards.

writes:

>It is evident that CW is an obsolet mode for NORMAL hams.

Except, of course, for the fact that hundreds of thousands of "normal"
hams are still using it, with no end in sight!

>Digital modes like
>PSK31 are far better because they are automatic and allow to transmit files
>(i.e binary, pictures, etc ...) that is impossible with CW.

Right. That's why I, as a person who loves CW and uses it regularly,
also uses PSK-31 and other digital modes. That's what makes me a
"normal" ham, as opposed to an NCTA whiner.

BTW -- since when can one send binary files via PSK31? Even if it were
possible, wouldn't 31-baud be kinda slow?

>If you need to
>transmit 2000 names of victims with symptoms, they will be dead before the CW
>transmit was done (after 30 names, the CW old-fart operator is thursty, not
>the computer. Hi hi hi).

Which makes it a shame that most amateur radio emergency operations
are still done on FM and HF/SSB voice modes! Talk about getting
"thursty!" After the first 100 names/symptoms, I'd definitely need a
Rolling Rock to whet my whistle!

>Most CW-coders are gay drunkards and not reliable operators. They are rapidly
>
>out of service with a little headache. Poor old-farts ... order your coffin
>now it's time for you.

Now, THERE'S a convincing argument against code testing if I *ever*
heard one! ROFLMAO!!!!

>Some liers said that PSK31 requires more electrical power than CW, it's
>false. Sun power costs nothing and it's possible to send PSK31 with a small
>computer system without Windows and a Sound-Blaster card.

As opposed to CW, which requires no computer at all! Bzzzzzzt!
You lose, anonymous troll!

>But that kind of
>low-power equipment (less than 15W DC required) is not for lazybones who want
>to operate Winpsk or Digipan on their expensive 2 GHz Pentium with 2 GB
>of RAM running Windows, just to show that they have money. For that equipment

>you had do it yourself. That's ham radio.

Please reference some articles on this non-Windows PSK operating environment. If you're aware of it, and it indeed exists, you should be eager to disseminate information about it.

>You can also continue to use CW, but considering what you got "on the nose"
>on the last 11th september, it's evident that the defense's plans of USA are
>obsolet ...

Now code testing requirements are being blamed for Sept. 11? Well, I guess I knew it was only a matter of time before that happened!

>will live to see the day.

I think SOME form of "safety net" is an integral part of American compassion, but as I said above, there should be limits..Strict ones. >>

Steve:

The "Social Safety Net" should exist solely in the form of private charities. If we did not have multiple generations of welfare recipients already populating our inner cities, the few people who genuinely could not take care of themselves through no fault of their own could be easily handled by private charitable organizations. The liberal Democrats back in the '60's saw a way to create their own voting bloc -- and proceeded, with horrific cynicism and callousness, to create a growing dependency class. In order to keep their miserable existence flowing, the mostly-black underclass is forced to vote Democrat -- and the Democrats come off as being "compassionate," "inclusive," and all other touchy-feelies due to the fact that they act as surrogate parents for half our nation's population.

From a standpoint of morality, I think the liberal socialist Democrats have a lot to answer for. They have kept themselves in political power at the expense of an enormous waste of human potential. When those of us who are picking up the tab someday decide that we no longer care to do so, what will happen? There will be a civil war between the producers and the underclass -- a shooting war with millions of dead bodies rotting on city streets. The American Holocaust created by liberal socialist Democrats will exact a huge cost in human life someday -- but, as usual, the Democrats don't see it.

>she heard "Blacks on Welfare" because she was predisposed to think that only
>Blacks were on welfare. Then Rush pointed out that far more whites are on
>welfare than any other race.

Brian:

Numerically, blacks and whites are about even as far as their representation on the Welfare rolls. However, within their respective ethnic group, black welfare recipients are horrendously over-represented, since they consume over 50% of social welfare but represent approximately 12% of the total US population. That black woman's reaction was merely based on what she already knew about people of her own race.

>I thought that welfare now lasted only two years, so there would be no more
>generations of welfare mothers from cradle to grave?

I thought so as well, but apparently there are plenty of welfare programs like AFDC and Section 8 housing that weren't affected by Clinton's Welfare Reform Act. I'll admit to not being up on the details, so if I'm all wet, caveat emptor.

All of Delaware is North and East of the Mason-Dixon Line. But don't
tell that to those who live in Sussex county, who fancy themselves as
residing just a few miles south of Biloxi, MS.

>buy food stamps.
>

JJ:

Who's to blame? The recipients of the taxpayer's tolerance and
genorosity, who are merely taking advantage of something that is being
handed over to them free of obligation (other than to vote Democrat),
or the taxpayers themselves, who voluntarily support situations such
as you describe? If the Welfare State had never been created, we
would not be providing permanent, cradle-to-grave support for generations
of indigent people (white and black). They simply wouldn't exist. The
first time a 15 year old single mother got an AFDC check, we should
have snatched it back, torn it up, and said, "Sorry, our mistake. Get
the kid's father to marry you and take care of you both."

Wouldn't it be wonderful if we still lived in a world where if an unmarried
young woman got pregnant, she had to leave town and live with her
maiden aunt in Baltimore until she gave the child up for adoption?
Instead of giving her Welfare Checks until the little bastard is old enough
to peddle crack on his own streetcorner?

>
> Completely irrelevant, Your Cowardice...The "picture" was NOT what you
>promised to send. had yous ent the picture as a "fwd" or clearly as a joke,
>then it would have been different.

Now, now, don't get all hissy. I sent the wrong file by mistake and stated that in public in this newsgroup. The correction and apology was made as soon as I saw the much-smaller file size originally sent as an attachment to e-mail.

> The fact is, you lied again. Clearly violated AOL's TOS yourself, but used
>the system to cover yor own misdeeds.

I explained what happened in public. Tsk, tsk, you'd think you were some kind of royalty to hear you talk!

I sent no less than FOUR correct copies as e-mail attachments, each at different times. AOL can see that themselves if they wish to examine for evidence of such transmission. AOL has complete control of their own operations. As just another subscriber I must obey the Terms of Service of my ISP and have consistently done so.

Is the "charge" now becoming one of conspiracy? "Covering up my own misdeeds?" How? I have no control of AOL operations of any kind. How can I "cover up" something that does not exist?

>
>> It is humorous to most normal humans,
>> using elements of incongruity in setting to elicit humor.
>
> Under other circumstances, I would agree.
>
> But then again, you sent it under a veil of misrepresentation.

"Misrepresentation?!?" I originally stated that I would scan my First Class Radiotelephone (commercial) and send the file to anyone requesting it...to prove it did exist. One poster requested that file in public after I volunteered the action in public.

I made a mistake in attaching the proper file to a private e-mail
(actually two of them, one each to different people, both the
same). As soon as I learned of the mistake, I corrected it in
private e-mail then made a public message explaining that a
mistake had been made.

Not only that, I sent no less than three subsequent copies of
the same scan to the original requester. The requester claimed
not opening them and trashing them because I could not be
trusted. That is hypocritical...or oxymoronic. If the requester
knew it was untrustable to begin with, why request it in the
first place? Was that to simply flame another to indulge in some
emotional fantasy? That's a perverse mental state.

>> "Libel is permanent as long as the letter, magazine article,
>> or book in which the words appear continues to exist, and

>> speaking, defamatory statements made over radio and
>> television are now considered libelous rather than slanderous."
>
> Then I guess we have ten years of LIBEL from your numerous accounts to
>show, don't we?

Libel is a serious charge. That has to be proved first. Proof is
not found in ramblings of fantasy from the uninformed or
ignorant or emotionally disturbed.

I have not had Internet access for "ten years." I have been on AOL
for about six years. The Internet was made public-access in 1991.
I have done computer-modem communications from my personal
computer(s) since 1984.

I have only ONE AOL account and have not used another ISP for
over a year. AOL allows up to seven "screen names" ('handles')
for each account. You should know AOL as a subscriber yourself.

>> The AOL user, identified only as "nevertrustlennie," in cooperation
>> with AOL, published an HTML format document which directly and
>> falsely accused another AOL subscriber of falsity, plus many more
>> traits of a generally undesireable nature. In short, that user
>> committed LIBEL deliberately and with the intent to harm another's
>> character and reputation.
>
> No, Lennie..it ACCURATELY described the breach of netiquette that you
>perpetrated by sending the .jpg rather than your "license".

Oh, my, another fantasy. Tsk, tsk. I explained the situation in public
as soon as I learned of the mistake, then sent the correct files in
private e-mail as attachments. In fact, I sent two copies of each
resolution twice, two at 300 dots per inch and two at 150 dots per
inch later. All the files I sent, incorrect or correct were in JPG
format, compressed in PKWare's common ZIP format for minimum
file size.

I am "guilty" only of making a mistake. Is making a mistake in private e-mail now a Capital Offense?!? :-)

> Sorry. The only liar here seems to be you.

Just what are these "lies?" Prove them.

I quoted from a lay person's guide to US law, written/edited by a (then) Associate Dean at Harvard Law School.

I made a mistake, made the mistake public, and sent the correct files (multiple copies, each at successive, separate times).

> And any harm sustained by you has been at your own hand.

How have I been "harmed?" Not I. I did not take on any AOL screen name of "nevertrustlennie" nor did I construct any "Homepage" (AOL term for personal web page) under that user name. I did not learn of this "homepage" until some AOL subscriber with the screen name of "nevertrustlennie" posted a message in this newsgroup.

That this homepage of user name "nevertrustlennie" disappeared from AOL is not, was not under my control.

>You provide the material by which you are routinely made a fool over.

An English teacher would no doubt chuckle at that sentence structure and quote "That is something up with which I will not put!" :-)

Those who overly indulge in fantasies are the fools. The fantasy this time is that "I made up a web page to harm myself," filled with a number of lies and truly great distortions carried over the edge of sanity. Foolish. Ridiculous. Pure fantasy.

The fantasy is also believing that someone can indulge in libel against anyone else yet be immune from castigation over such libelous charges. "Nevertrustlennie" tried that, got dumped. I had no control over that dumping.

The fantasy is also believing that strong personal feelings against any other person are somehow "justification" for committing libel. They are not. US law is quite clear on that, has been for years, is still clear on it.

The fantasy is also that the emotionally disturbed can do anything, say anything, write anything personally attacking another in public and be free from any restrictions on such behavior. That is incorrect in the real world. Restrictions are reality.

Radios and electronics have never worked with fantasy rules.

Get used to reality. It is all around you.

Uh huh...suuuuuuuuure you did....

"Honest Officer! She TOLD me she was 18 ! ! ! !"

>I explained what happened in public. Tsk, tsk, you'd think you were
> some kind of royalty to hear you talk!

Uh huh...Nice cover. Only YOU believe you, but that's OK.

>Is the "charge" now becoming one of conspiracy? "Covering up
> my own misdeeds?" How? I have no control of AOL operations
> of any kind. How can I "cover up" something that does not
> exist?

The calculated "ooops, wrong file"...

From an alleged PROFESSIONAL in electronics, Lennie?

So we "buy" your excuse..??? What does that say about your competence in
the technologies you claim expertise?

> I made a mistake in attaching the proper file to a private e-mail
> (actually two of them, one each to different people, both the
> same). As soon as I learned of the mistake, I corrected it in
> private e-mail then made a public message explaining that a
> mistake had been made.

Considering the nature of your "relationship" with all concerned, only the
most naive of readers "believe" your "wrong file" story.

YOU offer to send a "specific" file in response to sepcific requests, then
send the "wrong" file...??? Especially one with the connotation of the one you
sent?

As I said before..."Fool me once..."

>That's a perverse mental state.

The perverse mental state was to send offensive photography under the guise of another subject.

>Libel is a serious charge. That has to be proved first. Proof is
> not found in ramblings of fantasy from the uninformed or
> ignorant or emotionally disturbed.

Then we have nothing to fear from anything YOU author, do we?

>> No, Lennie..it ACCURATELY described the breach of netiquette that you

Still being silly? I've already told you that I've not been there and
have no intentions of going.

> But you know that some how, some way other military members were LEGAL and
> were accepted at the DXCC des, but you don't know how or why.

I don't even know if the other ops were military, Brian. Some were
accepted for DXCC credit and some were not. Have you contacted the desk
or any of the ops whose calls I provided yet?

> But you're sure MY operation was illegal.

I've raised questions regarding the legality of your operation.

> But you don't know how or why.

I have a very good idea of why. How does the written document of
permission you were given read?

> And Ed is just chiming in as per usual double standard.

Is he "just" doing that or does he have the same questions regarding
your operation based on the verbal okay of a U.S. military type?

> > > But you don't know who had the authority to authorize them to operate or
> how
> > > it happened.
> >

It's taken: Jari Kulki, a Nokia type from Helsinki has it. You could always change your call to T5/N0IMD. I suspect that it would be just as valid from Ohio as from Somalia.

You're operating from Somalia NOW? How does that written permission you
obtained read again?

Dave has consistently used his vast knowledge to direct you to 1) the folks who can tell you if your operation counts for DXCC since you don't know and 2) the folks who can tell you from whom they obtained permission to operate.

You were apparently unable to come up with this information on your own because you've continued to ask me--even after I told you numerous times that I did not have the information. You've been the most obtuse DX-101 student I've ever encountered.

And Brian has consistently said that he obtained permission from his commander, which just happens to be consistant with what is found on the ARRL web site.

You said that my commander HAD NO AUTHORITY TO DO SO!

hi hi

Dave, you know Nothing about operating from a military deployed location!

You've been given just enough rope to hang yourself, but instead, Ed jumps in as your surrogate.

Too bad for the both of you. Take a moment and cut him down.

Dave, you've repeatedly made the assertion that my commander had no authority to bless my DX operations from Somalia.

You're a silly, silly man masquerading as a world class DXer.

Since when is accuracy an undesirable priority? The CB channel chart
you distributed in a CB newsgroup lists frequencies from 28.000 to
28.755 as "expanded CB channels". If this is a sample of the kind of
"information" your company offers, you are doing your customers a
grave disservice.

Did I write that? I don't believe so. I questioned the authority of a
military commander to tell you, "Sure, Brian. Go ahead and operate your
amateur radio gear". I still question it. I also asked if your
operation was accepted for DXCC credit. Your reply: "I don't know".
How does your written permission to operate read again?

You didn't have any rope to spare for a lynching, Brian. You still
haven't found if your operation is accepted and you surely haven't
answered the question about written permission. I'm certainly enjoying
our little game of amateur radio morals and ethics.

Ed is a foolish man. Ed labels me a bootlegger for operating from Operation
Restore Hope/Somalia with my commanders permission.

Ed's employers says:
Somalia (T5)
At this time to operate in Somolia you would need permission from the United
Nations or your military commander.

There is no IARU-member society.

> authority to bless my DX operations from Somalia.

Ah Ah, Brian. I've questioned whether your commander had the authority to do so. I've also asked if you obtained "written permission". So far, you've just played dodge ball with the question. I've repeatedly asked if your operation was accepted for DXCC credit.

> You're a silly, silly man masquerading as a world class DXer.

You wouldn't be in a position to know.

All my operations over 15 years were accepted for DXCC credit. I have written permission from host governments for all of them.

I knew that American Embassies don't issue amateur radio licenses.

I provided information on other operations from Somalia.

I suggested that you contact the DXCC desk for info on accepted operations.

Despite being provided the info in the last two items above, you've done ziltch.

Dave K8MN

Demonstrate your vast knowledge of operating from military deployed
locations. Say again why military commanders cannot authorize me to operate
from Somalia.

You can start by commenting on the ARRL site that:
Somalia (T5)

At this time to operate in Somolia you would need permission from the United Nations or your military commander.

There is no IARU-member society.

Somalia (T5)
At this time to operate in Somolia you would need permission from the United
Nations or your military commander.

There is no IARU-member society.

Dave, do you see "written" in the ARRL information on operating from
Somalia?

> > You're a silly, silly man masquerading as a world class DXer.

No.

> Say again why military commanders cannot authorize me to operate
> from Somalia.

I don't believe I've said that it isn't possible. I questioned the
authority of your "commander" to do so and I've asked about written vs.
verbal permission. You haven't responded.

> You can start by commenting on the ARRL site that:
> Somalia (T5)
> At this time to operate in Somolia you would need permission from the United
> Nations or your military commander.

"At this time" you aren't in Somalia requesting permission.

> There is no IARU-member society.

No kidding? And if there was a society, it might not even have any
local nationals involved at all.

> > > You've been given just enough rope to hang yourself, but instead, Ed

There doesn't have to be one. There was none in Guinea-Bissau. What
has that to do with obtaining a legitimate license to operate an amateur
station?

> Dave, do you see "written" in the ARRL information on operating from
> Somalia?

No, I don't see written. I don't see you in Somalia either. Do you
believe that DXCC will accept a statement from you that "my commander
said it was okay" as proof that you had permission to operate from any
place on the planet?

> > > You're a silly, silly man masquerading as a world class DXer.
> >
> > You wouldn't be in a position to know.

I believe I wrote "You wouldn't be in a position to know". Ask yourself if you think you really believe yourself to have demonstrated any solid evidence that you are a DXer. Through this whole lengthy excercise, you've looked like a boob.

Over what, Brian? Over the fact that you've been less than forthcoming? Over your ignoring the question about written permission? Over your obtuse behavior in repeatedly asking for information toward which I'd steered you on numerous occasions? You persist in being a square head in a round world.

I think I can conclude from this that there's a whole bunch more enforcement going on out there than we hear about here or in QST per another of your posts. And they're both Powells. Fancy that.

That's no surprise at all based on what I've heard on the air. Most of
it is in Spanish and obviously comes from Central and South America.
We can't use SSB between 28.000 and 28.300 but in many countries phone
is legal all the way down to 28.000. If ya can't speak the language ya
can't make any judgements.
>
>
Like I said, life is bigger than chasing pirates on 10m. I have an
allergic reaction to getting into it anyway because I really spanked
myself the only time I ever played frequency cop. It was a slow nite
so I idly twisted the 75A4 knob up the band above 7.300. There were
bloody huge ssb signals around 7.400. Buncha guys horsing around maybe
2AM, no callsigns, sounded just like 27mHz nonsense except they had
roger beeps. All of 'em were 20-30 over nine. I leaped on the phone
and dialed Laurel and got a radio op. Turned out I'd "snitched" on
some U.S. Navy network.

Dave, that's the quote from the ARRL web site. Go argue with them.

You're amazing. When you were in the service did you demand everything in
writing?

I'll bet Bob Kerry wished he had.

Its part of the ARRL speil.

> > Dave, do you see "written" in the ARRL information on operating from
> > Somalia?
>
> No, I don't see written.

Neither do I, but you're still hung up on it.

> I don't see you in Somalia either.

Only because you weren't there. Had you been, then Ed could call you a
bootlegger as well.

> Do you believe that DXCC will accept a statement from you that "my
commander
> said it was okay" as proof that you had permission to operate from any
> place on the planet?

Don't know. I haven't given them a deposition.

> > > > You're a silly, silly man masquerading as a world class DXer.

> if you think you really believe yourself to have demonstrated any solid
> evidence that you are a DXer. Through this whole lengthy excercise,
> you've looked like a boob.

I'm reminded of the day that that the web site for the French authorizations
was posted here and it clearly showed that the French hams you communicated
with were almost 200khz out of band. This backed up what the French ham on
RRAP had told you almost two years earlier but chose to ignore.

Now I've posted from the ARRL web site the requirements for US military
personnel to operate amateur radio in Somalia, and you just pick, pick, pick
away at it.

You're in denial. Whatever Master DXer Dave says is gospel. He can never
say he was wrong about anything, even when its served up cold.

> > > All my operations over 15 years were accepted for DXCC credit. I have
> > > written permission from host governments for all of them.

We're not talking about whether YOU had permission. We're talking about MY
authorization to operate radio from Somalia. Again, what is the address of

anyone in the Somali government.

> > > I knew that American Embassies don't issue amateur radio licenses.

Who doesn't know that?

> > > I provided information on other operations from Somalia.

So? I used one of those individuals ham radio to operate with.

> > > I suggested that you contact the DXCC desk for info on accepted
> > > operations.

I'm not worried about it 10 years after the fact.

> > > Despite being provided the info in the last two items above, you've
done
> > > ziltch.

Despite serving up the ARRL information on the two methods of gaining permission to operate from Somalia, you STILL question it.

You're just thick.

>So you say that my operation was bootlegging and other military members in
>the same situation were legal?

Is English your second language? Based on your description of the
circumstances you describe, I believe you bootlegged the call.

I was pretty clear that I don't know whether the other operations were legal.
Which of the words "I, don't or no" do you have trouble understanding? Or are
you deliberately misinterpreting my words to bolster your untenable position?

>FWIW, the dxcc desk gets a copy of this.

Wonderful. I will send copies of your posts to your employer, too -- all of
them.

Not to find out if his operation is legal, Dave -- he want to see if he can "win" this one by trying to drag my boss into it. Apparently the social conventions of "netiquette" have absolutely no value to him.

No, I don't, Brian. It is my personal opinion. I thought you understood that, but I have been surprised often at what you claim to misunderstand to bolster your untentable postions.

Can I infer from this that you will no longer make any statements on this NG that you don't have the authority to make, or is this another "do as Brian says, not as Brian does" sort of things?

Kellie, if we were the primary users of the band then legal limit would probably be OK. But since we're not, the 30M band is closer to the typed of shared authorization we are facing, than are the Novice subbands.

So lets use 30M as the model for the new 60M band, not the Novice subbands. Even if the power limit also happens to be 200w.

I've you weren't so hell bent on saying shitty things to me, you could have seen that. But no...

>Ed, you've gone too far.

So I am responsible for only some of your actions.

Can you explain how my actions cause your actions, or have I "gone too far"
again?

Or do you mean something different than what you say?

Ed, you called me a bootlegger.

Your employer's website information agrees with my statements.

Why do you disagree with your employer and call me a bootlegger?

Is this how you respond to a legitimate question?

Based on your description of the
> circumstances you describe, I believe you bootlegged the call.

Ed, you said, "You took advantage of another country while you were there
and bootlegged a
call."

There was no, "I believe..." or "Its my opinion that..."

You stated as FACT that I am a bootlegger.

> I was pretty clear that I don't know whether the other operations were
legal.
> Which of the words "I, don't or no" do you have trouble understanding? Or
are
> you deliberately misinterpreting my words to bolster your untenable
position?

My position is fine and legal according to your employers web site.

> >FWIW, the dxcc desk gets a copy of this.
>
> Wonderful. I will send copies of your posts to your employer, too -- all
of
> them.

And in there you will find admissions of being wrong, and apologies where
warranted.

> 73, Ed Hare, W1RFI

You know Ed, military members place themselves at risk every day for our
nation's safety and security. For you to state that we, or I, had taken
advantage of a country like Somalia is beyond offensive.

You're just plain wrong.

Don't ever call me a bootlegger again. I would like an apology posted to this newsgroup.

73, Brian

No. No.

Is it now your "opinion" that I took advantage of another country and
bootlegged a call?

Ed, you alone are responsible for your actions.

I stated that I had asked for permission from my commander to operate while
in Somalia, and permission was granted.

And your statement, "You took advantage of another country while you were
there and bootlegged a
call."

Your employer's web site states, "At this time to operate in Somolia you
would need permission from the United Nations or your military commander."

Is there anything here you want to dispute?

Ed, you went too far. Call me Burkie, Gadfly, or a$$hole, but don't characterize my military service in Somalia as, "You took advantage of another country while you were there and bootlegged a call."

and, "The military has authority only over military communications. They do not have authority over Amateur Radio communications. Brian bootlegged the call."

You couldn't have been more wrong.

Brian/last

Wrong, you misrepresented the fact that only Techs/Generals in US possessions and two states can have a 2x2 call. That says something about your character right there.

You said in <17249.472$r7.43872464@newssvr16.news.prodigy.com>:
"I've known plenty of Tech's and Generals with 2x2's."

>

> Til you need some more book lernin'

Looks like dullard Burke didn't get the reference, much like he didn't get that he misrepresented the call sign assignments.

> So how do you and Dave Heil know each other?

Changing the subject from the call sign misrepresentations?:
You said in <17249.472$r7.43872464@newssvr16.news.prodigy.com>:
"I've known plenty of Tech's and Generals with 2x2's."

Why, are you interested in the cheap cologne wearing, balding fatboy kook-stalker?
He already has one suckboy.

3106. Interesting Trip (So that's what NO code=NO ham means.)

Hi gang,

I've just returned from a <desperately needed> two country vacation in Central and South America. Costa Rica is a gorgeous little country with a pleasant and peaceful disposition. Pity we only got a one day look at her. Two weeks in Ecuador made up for that brevity though and was actually insufficient to enjoy all the pleaures that even one of its cities offered...but we did our best. :-)

Back to AR. Upon driving around Guayaquil, one thing was very apparant...this is one radio-active town! I saw tri-banders and mono-banders all over the place. And yes, when we went to Quito...we saw a quad. How appropriate. Every morning, I'd take the kids for a walk. I made sure that when we came back, our route took us by that grand antenna farm I'd spotted earlier...just around the corner from my father-in-law's!

Well, in the weeks of preparation that we'd gone through for this trip, I'd not given any thought to actually operating in HC land until the last minute. ("Next time," I told myself.) I regretted that. So I figured I'd look about picking up a HC call (Along with the Mrs.) We went down to the local radio club, then the ministerio to find out what we needed to do for my HF ticket and perhaps a no-code ticket for my wife. "What no-code ticket seï¿½or? We have only Novato or General" Well, that's Novice or General folks...and both require the same code test with another written (or two?) for the General. I say "two?" because they were nice enough to waive all tests based upon my holding a US Extra ticket. It was explained to me that this has nothing to do with the reciprical agreement, it was just a courtesy extended by someone authorized to "sign off" on the deal. (I was already free to operate as WA2SI/HC♯.) How did my wife do? Well, we're both waiting for HC2 calls now. One General...and one Novato for the XYL who managed to remember enough to send a few characters in CW. Yes, I said SEND...funny how accomodating folks can be if they know that you're legitimately making the effort. It was further explained to me that they can be a bit more accomodating wrt issuing an AR license, but as per ITU/IARU protocol, some form of code test is required for both their "ham" tickets. Oh, so that's what Dick (N0BK) meant when he said "Not according to the ITU." In the words of Arte Johnson..."verrrrrrry interestingk!"

So next time, (Next year or 2004 perhaps.) I'll give you guys a "head-up" and a QSL card from the Galapagos Isles. (HC2xx/8) or "Mitad del Mundo," (HC2xx/4)which is the "Middle of the World" or both 0 latitude and longitude. Hope all was well with you folks and it's good to be back. :-)

Amateur Radio Newsline™ Report 1304 August 9th, 2002

Amateur Radio Newsline report number 1304 with a release date of Friday, August 9th 2002 to follow in 5-4-3-2-1.

The following is a QST. U.K. hams take to 5 MHz in a big experiment. Find out the details on Amateur Radio Newsline report number 1304 coming your way right now.

(Billboard Cart Here)

**

ON THE AIR: BIG UK 5MHZ EXPERIMENT

If you tune around 5 MHz and hear what sounds like ham radio QSO’s, your ears are not playing tricks. A major study of 5 MHz propagation has begun in Great Britain and some hams are already on the air. Jeramy Boot, G4NJH, reports from Nottingham in the U.K.:

--

The 5 Mhz experiment has begun. The Radio Society of Great Britain has announced that permission has been granted by the Ministry of Defence and the Radiocommunications Agency for the allocation of five spot frequencies in the range of 5250 to 5450kHz. The frequencies will be made avbailable in the form of a 3 kilohertz bandwidth channel by way of a Notice of Variation to the UK Amateur License. Because it is a controlled experiment applicants are required to report their findings and results to the RSGB.

The purpose of the experiment is to carry out propagation and antenna investigations aimed at improving the understanding of Near Zenithal Radiation or NVIS - Near Vertical-Incidence Skywave - communications via the ionosphere. The frequencies assigned are 5260, 5280, 5290, 5400 and 5405kHz. It’s expected that this experiment will run for about 4 years.

Jeramy Boot, G4NJH.

--

Here in the United States, Charles Harpole, K4VUD, one of the permitted operators of the American WA2XSY 5 MHz-band test stations invites U-K hams to contact him to set up a sked. The 5 point 260 MHz channel would be the best frequency for him. He is available for all times and days until the 20th of August and his e-mail is k4vud@hotmail.com (GB2RS)

**

ENFORCEMENT: FIVE LICENSES CANCELED BY FCC

Five hams who participated in a September 2001 testing session in Yucaipa California and who declined to be retested have lost their ham radio licenses. The FCC's Riley Hollingsworth says that in this case it was the VEC who brought the matter to his agency:

--
Hollingsworth: "Now the W5YI-VEC really did its homework on this one. They picked up some comments and complaints on an Internet News Group about the examination session; did a little homework and further research and found some very good reasons to refer the matter to us."
--

On April 30, the FCC wrote all five requiring them to re-take their Amateur Examinations before June 30th. All five failed to appear. Again the FCC's Riley Hollingsworth:

--
Hollingsworth: "Those licensees were Eddie Bartolome - Extra Class N6YAG of Los Angeles; Camito Lopez KG6GJC a Technician of Los Angeles; Marcial Rivas - General Class KG6HCP of Salem Oregon; Manuel M. Vega, KG6GSP - General class of Anaheim California and Marcelino Llanes, KG6HBR of Oxnard California."
--

Hollingsworth adds that the FCC is continuing its investigation of other examinations given by the Volunteer Examination team involved in the September 1st 2001 session in Yucaipa. Also that his office really appreciates the vigilance of the W5YI-VEC. (FCC, RAIN)

**

ENFORCEMENT: FCC MAY RETURN FORMER KV4FZ TO THE AIRWAVES

An ex-ham from the US Virgin Islands who was forced off the air a year and a half ago by the FCC may soon be back on, courtesy of the FCC. This as the agency indicates that it may act to reinstate the amateur license of Herbert L. Schoenbohm, the former KV4FZ. Amateur Radio Newsline's David Black, KB4KCH, has been following this story and has the latest:

--
Herbert L. Schoenbohm's name shows up a lot in FCC records. He's the former ham who used to hold the callsign KV4FZ. That was before he lost his license.

In December, 1992, Schoenbohm was convicted of fraudulently using a counterfeit access device to obtain long distance telephone service. He was sentenced to two months of house arrest, two years probation and fined $5000. That left the FCC feeling that a felony conviction disqualified Schoenbohm from continuing as a Commission Licensee.

Two years later, Schoenbohm filed with the Commission to renew his amateur radio license. The Commission answered -- but not with what he wanted to hear; instead, the FCC designated his application for a hearing. Two encounters took place--one in 1995, the other in '97. At that point, the Commission told Schoenbohm he should no longer be allowed to have an FCC license.

He was allowed to operate until he exhausted all avenues of appeal. That happened in October of 2000. In January, 2001, Schoenbohm ceased on-air operations.

Before leaving the airwaves, 'though, Schoenbohm vowed that he would one day return to the airwaves as a licensed radio amateur. That day may be soon--based on findings presented at an FCC Administrative Law hearing earlier this year.

The hearing was held to determine if Schoenbohm now meets the requirements to once again become a Commission license holder in the Amateur Radio Service. The finding is complex and covers nearly two dozen pages. But it appears that the government may be ready to give Schoenbohm a second chance as a licensed ham.

The Commission says in part there is sufficient evidence in the record to support a finding that Schoenbohm has rehabilitated himself. The Commission notes that -- based on the evidence --it appears unlikely he would engage in any future misconduct. The Commission's Enforcement Bureau Investigations and Hearings Division endorses Schoenbohm's return to the amateur radio airwaves.

Schoenbohm took and passed a new exam in March, 2001. But the Commission again threw in a delay, designating his application for a hearing on the basis of character issues. This is the application that an Administrative Law Judge has been reviewing. Now that the recommendations are in, the Administrative law judge could issue a final opinion and recommendation within the next few months. That means Herbert Schoenbohm could possible be on the air again sometime this year.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

In the end, it is going to be up to the Commission to make a final resolution as to whether or not the former KV4FZ returns to ham radio. Nobody can predict what that decision will be. And if he is permitted to return, will it be with his old KV4FZ call sign? (ARNewsline™ from FCC Publiic Files)

RESCUE RADIO: COMMUNICATIONS TECHNOLOGY HELPS SAVE KIDNAPPED GIRLS

Two kidnapped California teenagers are alive thanks in part to a newly developed law enforcement communications technology. Mert Garlick, N6AWE, has the details:

--
It happened on Thursday August 1st when two teenage girls from the Quartz Hill

area of Southern California were abducted at gunpoint. Using the newly established AMBER child abduction alert system, the names of the teens and a description of the car they were in was immediately distributed to law enforcement agencies and broadcast outlets statewide. Shortly thereafter the California Transportation Authority was displaying information on it’s 316 electronic signs on freeways.

Sheriff's deputies in Kern County soon received several calls from people who saw the white Ford S-U-V. A sheriff's helicopter crew used the information to direct a ground unit that made the felony arrest stop. When he resisted and brandished a weapon, deputies shot and killed Roy Dean Ratliff and freed the girls.

The rescue took place only six days after Governor Gray Davis directed the installation of the AMBER system. AMBER uses a combination of two-way radio, fax, e-mail and other communications technology to quickly spread word when a child is abducted. It is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.

In this latest case it took less than 4 hours to get the AMBER alert on the two missing girls circulated to the road signs. California’s Governor Davis says that his states AMBER system will now be refined to make it react more swiftly.

For the Amateur Radio Newsline, Mert Garlick, N6AWE.
--

Today, there are forty-one AMBER Alert programs across the country. The system is credited with safely recovering at least seventeen children since 1997. (Published news reports)

**

ENFORCEMENT: PLEASE FIX THE INTERFERENCE

A pair of utility companies have received letters from the FCC regarding unresolved interference complaints from area amateurs. According to the W5YI Report Lakeland Electric Company in Florida and Commonwealth Edison in Illinois both were sent notes reminding them of their responsibilities to prevent interference to radio stations including radio amateurs. The letters gave the electric companies 90 days to either resolve the problems or contact the FCC with a specific timetable for making the fix. (FCC from W5YI Report)

**

HAM RADIO POLITICS: NEW DIRECTORS FOR THE NFCC

Turning to the ham radio political arena, word that Ken Chilton, KA1TIH; Alex Harvilchuck, N3NMN and Vincent Bardsley, KB3OM have been elected to the Board of Directors of the National Frequency Coordination Council. They replace outgoing Directors Dick Isely, W9GIG, Owen Wormser, K6LEW, and Dave Baughn, KX4I, who helped form the NFCC at a meeting in St. Charles Missouri back in 1995.

Chilton, Havilchuck and Bardsley also join Nels Harvey, WA9JOB and Clay Freinwald, K7CR as the duly constituted National Frequency Coordinators' Board. This for the twelve month period starting on September 1st. (ARNewsline™)

**

HAM RADIO POLITICS: NEW SACRAMENTO SM IS OLD SACRAMENTO SM

California’s former Sacramento Valley ARRL Section Manager has become the new Sacramento Valley Section Manager following the resignation of the current Sacramento Valley Section Manager. Confused? Well, here’s what happened.

According to an ARRL Bulletin, Jettie Hill, W6RFF, of Roseville, California, has been appointed to succeed Jerry Boyd, K6BZ, as the Sacramento Valley Section Manager. This is because Boyd is moving out of the section.

Boyd was appointed in 2000 to replace Hill. Hill continued to serve the section as the regions Affiliated Club Coordinator and as an Official Relay Station. W6RFF previously served as Santa Clara Valley Section Communications Manager from 1978 until 1982 and as ARRL Pacific Division Vice Director in 1982 and 1983. The appointment of Hill, who had previously served for more than 10 years as Sacramento Valley S-M became effective on August 1st. Got that? (ARRL)

**

FUTURE TECHNOLOGY: HIGH TECH WORKERS NEEDED

Still in California, word that lack of qualified workers is costing Silicon Valley billions of dollars annually. The management consulting firm A.T. Kearney says that this is threatening the regions position as a global high technology center. The region's shortage of high-tech workers means that one in three jobs requires special recruitment efforts, or goes unfilled, leading to a loss of over $3 billion a year. (ProPeople.com)

**

RADIO REGULATIONS: PERMANENT CELL NUMBERS ON HOLD

Mobile phone users who want to keep their numbers after switching wireless companies will have to wait until late next year for that option. This after the Federal Communications Commission gives cellular phone companies until November of 2003 to offer customers the choice.

The new date, one year later than the previous deadline to implement the service. It is the third extension granted by the FCC. Most wireless companies oppose the idea, arguing it would cost billions of dollars and drain resources needed to improve and lower the cost of wireless services. (FCC)

**

WITH THE HANDI-HAMS: EXTRA CLASS MANUAL IN AUDIO

The Handi-Hams have announced that the latest ARRL Extra Class License Manual is now available to it’s blind members in adapted audio format. At the present time Handi Hams only digital media available but the audio is being

re-mastered onto tape. When the cassette version is available Handi Hams will let us know so that we can let you know. Meantime keep an eye at Book and Tape Catalog area at www.handiham.org for updates. (Handi Hams)

**

THE SUPPORT FUND REPORT WITH ANDY JAREMA, N6TCQ

Its time for a report from the Amateur Radio Newsline Support Fund. Here's our Administrator -- Andy Jarema, N6TCQ:

--
There are two items to cover this week. I'll start with our poll regarding credit cards. Three weeks ago we asked those interested in supporting Amateur radio Newsline using a credit card to write the single word YES in the subject line of an e-mail and send it to us. We have tallied the results and there were only 17 who said yes. And of the 17, all but one said that only a Pay Pal account was acceptable to them.

Well, statistically speaking, you don't have to know how to do linear regression to know that 17 people out of the 10's of thousands who listen in each week is not a very good response. What it says is that 17 people have Pay Pal access and would use it to help support Amateur Radio Newsline. Even so, we looked into creating a Pay Pal service for those who wanted to use it. Without wasting a lot of time, suffice it to say that the costs involved versus the return would not warrant the expenditure. So at present the credit card issue is dead. For now at least, the Support Fund will remain as it always has. Just the P.O. Box where donations can be sent. Get a pencil and paper ready. I'll give it in a few moments.

The other item I want to touch on briefly is the current state of the checking account. Thanks to your generosity, we made it through June and July. What that means is the bills from May were paid in early June and those from June went out on schedule in July. Now it's early August. The July bills have come due, unfortunately at the same time that our folks are off to Huntsville, Alabama to present the 2002 Young Ham of the Year Award. So that you get a better understanding of the costs involved, I've done a rough breakdown.

First of all, our corporate underwriters Vertex Standard and C-Q Magazine cover almost all the costs of the young person selected for the award. They pay their airfare. They pay their lodging. Vertex-Standard provides an additional gift of Yaesu brand ham radio gear. C-Q treats the winner to a week at Spacecamp. When you add that up, it's probably a gift package with a retail price tag of close to $5000.

Obviously, they do their part and we have to do ours. It costs about $300 a year for a round trip ticket to get one of our people from Los Angeles to Huntsville. Actually, we have our people fly to Birmingham and drive up to Huntsville because this saves quite a bit of money. Yes, it takes them out of their way and adds a few hours of travel time. But the savings in airfare make this added time worthwhile.

The wonderful folks at the Huntsville Hamfest provide us with a free room. We do have to pay our people's expenses like food, hotel, telephone service and a rental car when necessary. We also pay for the plaque presented to the winner and for the mini-banquet we hold for him or her on the Friday night prior to the actual Saturday presentation. The total this year will be somewhere between $1000 to $1100. So we need to raise that in addition to our normal $800 to $1000 it costs monthly to keep the Amateur Radio Newsline newscasts coming your way. And that's where you come in.

Amateur Radio Newsline is a federal 501 (C) (3) not for profit corporation. Donations to it are tax deductible. The address – you've heard it before - is Post Office Box 660937, Arcadia California. Our Zipcode is 91066.

OK. 'Nuf said. But I'll be back next week with the latest thank-you list. For now, from Arcadia, in sunny Southern California's San Gabriel Valley, I'm Andy Jarema, N6TCQ.
--

If you missed the address given by Andy it will repeated at the end of this weeks newscast. (Newsline Support Fund)

**

HAM RADIO IN SPACE: KD5MDT REPLACES KC5FVF ON ISS EXPEDITION 6 CREW

Astronaut Don Pettit, KD5MDT, has been named to replace Don Thomas, KC5FVF, as a member of the Expedition 6 International Space Station crew. According to the ARRL Letter, Pettit had been training as backup flight engineer for the increment six team and was ready to step in.

NASA said the reassignment resulted from a medical issue that affects Thomas' long-duration space flight qualifications. According to Astronaut Office Chief Charlie Precourt, KB5YSQ, the demanding nature of long-term space flight requires a conservative approach to crew health issues, especially this early in the program. Pettit will join Expedition 6 Commander Kenneth Bowersox, KD5JBP, and Russian cosmonaut Nikolai Budarin, RV3DB. (ARRL Letter)

**

HAM RADIO IN SPACE: THE METEORS ARE COMING

Weak Signal operators -- listen up. The Perseid meteors are on their way.

Lee Wical, KH6BZF, says over the QCWA remailer that from midnight to dawn, on Monday August 12th and Tuesday August 13th about 60 to 70 meteors per hour will enter Earth's atmosphere. This particular meteor shower is created by the Earth passing through the debris field left from the Swift-Tuttle comet. The grain-like particles enter Earth's atmosphere, burn up and create what most

people call shooting stars.

The Perseid Meteor shower is not expected to be as spectacular as the Leonid Meteor shower that occurs each November. But, if viewing is good, people will not be disappointed. And if the ionized tails are good, ham radio meteor scatter D-Xers and WSJT users will be happy as well. (KH6BZF)

**

INTERNATIONAL - UK: LONG WAVE GOODBYE

As predicted by Media Network, the loss-making sports station TEAMtalk 252, which broadcast to the UK on 252 kHz Long Wave from a transmitter in Ireland, has closed down. This, after less than 6 months on the air. The station ceased broadcasting at 1300 UTC on July 31st. (Media Network)

**

INTERNATIONAL-CANADA: NEW RAC QUEBEC SM

Claude Paquet, VE2OCP has been elected as Radio Amateurs of Canada Section Manager for Quebec. This, for a two year term that will begin on November 1st. Paquet ran unopposed, eliminating the need for a balloted election. He has also agreed to complete the term of Richard Desaulniers, VE2DX who resigned for personal and professional reasons on August 1st. (RAC)

**

DX

In D-X, G0TQJ he has now gone QRT from Afghanistan where he operate slash YA. During his say in Kabul Chris made 1950 QSOs on SSB and another 850 on RTTY. He is getting his QSL cards printed. He has also sent his documentation to the ARRL DXCC desk for approval. (GB2RS)

And the FISTS newsletter reports on the apparent pirating of callsign ZD7CW. The pirate is using CW and not very active. In fact, he was last heard in November of 2001. But the real ZD7CW has been inactive for several years. (Q-News)

**

THAT FINAL ITEM: A TRUE CAPTIVE AUDIENCE!

And finally this week the story of an interesting call sign operating from a rather unusual place in Ireland. Here’s Q-News Graham Kemp, VK4BB;

--
From our files, the story of a captive audience. A permanent amateur Radio Station with the call sign EI0CRM -- you heard right -- C-R-M -- “crim” -- EI0CRM is being set up in of all places the radio museum of the Cork City jail.

Cork City jail opened for business in 1824 and was used as a prison until 1923. When Radio Erin was expanding in the mid 1920’s, it was located in this jail. Its call sign was 6CK.

The broadcasting studio is now fully restored and a fine display of radio artifacts are on permanent display. Have a listen out for EI0CRM
--

Talk about a QSL card that you may want to keep under lock and key. (Q-News)

**

Roger,

For months we have read the various sick, obscene, and demented posts which you have written and posted in these NGs. I am particularly addressing the sick and vulgar comments you post about the underage children of amateur radio operators whom you have differences of opinion with. Your descriptions of various sexual acts that you claim these children engage in with adults is sickening, disgusting, and illegal. Yes Roger, such acts, contrary to your belief of free speech, are not and have never been First Amendment protected speech.

My question. You apparently function in society Roger, so I will venture that you know right from wrong. Child pornography is wrong! Dead wrong, and you know it Roger! So why do you post it?

I challenge you to respond to this post, without resorting to profanity and obscene speech. You claim you are an educated man. We would like to see you respond in a rational, mature manner. Your turn.

Yes, it still belongs to us, even if they are squatting on it now. When
time comes to establish relations again we should ask for it back.

Whatever Herb actually did, or didn't do. And I heard most of it over the years. I just don't think he is STUPID enough to jump back on 313. Perhaps I am wrong.

I am not a 'Herby supporter' whatever that means, nor am I a 'Porkbut' supporter, whatever that means. I just hope that those with the capability of transmitting on 313....don't. Why? Because its idiotic for one and two it is not helping ham radio one bit.

Of course I KNOW some of you must do your thing. Thats fine too.....I just wonder if you ever heard of the phrase...."Its just like shootin fish ina barrel".

You figure it out.

Yup. The point I'm making is simply that PLCs are everywhere, not just
in 'motor control'.

> The biggest job I ever ran was a $22 million unit

The only work experience that is relevant to amateur radio policy is
kind of work K2ASP has done - and does.

> But ham radio is far from being exclusively about
> the technologies involved with the hobby is it?

Of course not! Part of the game is technology, sure. Then there's
public service of many types, the competitive/sporting aspect, the
ragchew aspect, the educational part of things, etcetera, etcetera,
etcetera.

> > >Never mind that if there weren't any factory process controls there

Yup. That's how the Major Leagues do it.

> I watched my brother dial up a welding robot control PLC at a SAAB
> plant in Sweden with his Windoze box and peer at the welding process
> via the robot's vision system. From Delaware.

Ya know what comms makes that possible? Fiber optics. No "RF" involved
- just not enough bandwidth. Ask K2UNK.

> This is real
> engineering. This is why we can afford to own cars. And radios.

'zactly. I'm sure GM could make Saturns as good as mine without PLCs -
but they would cost a heck of a lot more.

> Speaking of Putzboxes . . Didja know that the eforts which led to the
> seminal 1908 patents for RTTY were spearheaded by an M.E.?

Nope. But I am not surprised. I've been inside various Model 19s and
such to know that they are 99% ME work and 1% EE work.

> I can't get real exited about the technologies involved in ham radio,

> programs like DX4WIN, Writelog and the spots processsors. A real PLC
> wonk could do some slck work in this area.

That's one way to do it, but I'm thinking of a different method.

There are lots of little PLCs out there for very little money. Many
models have communications capability. Imagine a little PLC at the 80
meter 4-square, another at the base of the Big Bertha, another at the
feedpoint of the beverages, etc. All networked to each other and the
shack computer thru a twisted-pair (literally), a fiber optic system,
or maybe a 900 MHz spread-spectrum Part 15 LAN setup. Shack computer
controls and indicates what's going on at each location, including
things like SWR, remotely sensed.

Of course the enterprising amateur could homebrew a control system to
do all that, but Commercial Off The Shelf (COTS) PLCs are becoming so
inexpensive that it's not cost-effective to do it yerself. Plus the
issues of ruggedizing the remote locations for the environment has
already been done by the PLC manufaturer(if they are decent ones).

Think of the possibilities - and ya could prolly pay for much of it
with the savings in coax.

> > - control/indication of power distribution and generators on Field Day

. . . ya took it too far with that one!

Not really. There's a bunch of dead-serious FD groups out there. One
bunch in Nashua, NH (N1FD, I think) runs something like 23A every
year. Separate dedicated rigs on every band/mode they can manage from
160 on up to 432 or even higher. And they DON'T run QRP rigs or simple
dipole/G5RV setups. Plus they use locations with no facilities, so you
can imagine what their power requirements are with lighting, cooking,
networked computer logs, etc..

How to power such a setup? One choice is a big diesel genset that can
power everything - at a price. Another is to run a bunch of smaller
gensets, dividing and shifting the load as required.

With the exception of those who originally met on 14.313 (various mobile
and maritime mobile support nets), common sense and maturity have been absent
from the denizens of this frequency.

I sure do hope that if trhe FCC does grant Schoenblom a new license that
he approaches it with new respect. If not, I bet he see's jail time.

Asking Roger to respond without using profanity and obscene speech
is like asking Rosemary to have another baby.

3127. Re: The Need for CW

>Ed is a foolish man. Ed labels me a bootlegger for operating from Operation
>Restore Hope/Somalia with my commanders permission.

Well, we have to assume that Ed is interpreting the UCAJ (Uniform
Code of Amateur Justice) by virtue of his being an ARRL "officer."

Sort of like AmJAG...and with commercials for ARRL, too.

>Ed's employers says:
>Somalia (T5)
>At this time to operate in Somolia you would need permission from the United
>Nations or your military commander.
>
>There is no IARU-member society.

Apparently the ARRL "officer" doesn't read the battalion bulletin
board or Daily Directives or Orders of the Day.

There you have it.

>You are correct. It is silly to operate amateur radio under circumstances for
>which the person giving you "authorization" does not have authority to do so.

It is even sillier when an ARRL "officer" tries to blackball another radio amateur with untrue charges.

It is even sillier when an ARRL "officer" decides he or she can override military authority over military personnel on active duty.

It is much more sillier when an ARRL "officer" disregards the Directives of his own "command."

Are you trying to be a Barracks Lawyer and re-interpreting the Uniform Code of Amateur Justice (UCAJ) here?

>So his sergeant said okay. That should work...

Casey, try understanding who has rank, not in being rank.

Commanding Officers are commissioned officers.

Sergeants are non-commissioned officers.

Brian was a sergeant. His Commanding Officer was a commissioned
officer.

All military personnel are accountable to military orders and directives.
At no time are they accountable to Department of State unless the
military directs them to be. At no time are active duty personnel
accountable to ARRL or ARRL "officers."

We once had a SHARES exercise (SHARES is the FEMA equivalent of
RACES) on a US Government HF frequency interrupted by what we thought
was a Spanish-speaking pirate net. A quick call alerted the DF net,
and it turned out to be the daily roll call of the Mexican "Federales"
installations in Baja California !!

Smuggling has ALWAYS been the Customns Service playground. And
this is smuggling, pure and simple.

I was involved in training the Customs Inspectors and Import
Specialists in what to look for on entry documents to "flag"
shipments for detailed inspection.

Failure to "re-deliver" is grounds for a Customs raid, and believe
me, a raid by Customs Agents makes the US Marshal and FCC operations
look like a church social.....they have direct seizure and arrest
authority, for starters.

I said, "I've known plenty of Tech's and Generals with 2x2's."

I didn't say that they had to be in the contiguous 48 states.

You and Dave have a lot in common. You can't be wrong.

Brian, think about it. Its a web poll. Anyone responding to it has a
computer. Those responding with a negative answer via the web just might be
cranks.

Perhaps. I know both terms as Korean. A Yobo is a girlfriend, and kimchi
is a fermented cabbage side dish.

What is kimchi in the UK?

I've been saying that for years, Jim. CW is my favorite mode.
There are times when CW is the only choice available given
all the boundary conditions. (Not everyone has PACTOR II :-)
In fact, I haven't even taken time to hook up my SCS PCT2e
to my relatively new IC-756pro.

A fermented cabbage side dish, usually imported from Korea. You can find it on the International Foods aisle at Tesco's.

>> she already knew about people of her own race.
>
>Larry, I didn't say she was black.

Brian:

It really doesn't matter what color she was; the minute she heard the
term "Welfare," she thought about blacks. Why is that? The trailer
parks of 4-land, and even those of my own state of Delaware, are full
of single-mother white-trash Welfare recipients and their fatherless
chillin'. However most people associate being on Welfare with being
black, and vice-versa, due to the fact that blacks are grossly over-
represented. Why? Is it because being black predisposes a person
to be intellectually immature, and economically depressed? If so, how
do you account for the exceptions, like Walter Williams, Economist,
Secretary of State Powell, Supreme Court Justice Thomas, etc? These
are black men who are not only economically successful, but are
also conservative Republicans as well!

I think the original comment was a joke. A joke, OM! Ya see... anyone who responds to a web poll obviously has access to a computer. Elaborating further, a person who has no access to a computer will not likely hear of the poll. This means that they won't be counted in the poll. This means a poll like this is useless. It's a joke!

Source record: 50859

Q. What do you call a basement full of anti-coders?
A. A whine cellar.

Q. Why did the anti-coder scale the chain-link fence?
A. To see what was on the other side.

Q. What are the worst six years in an anti-coder's life?
A. Third Grade.

Q. Why did the anti-coder smear Preparation H all over his VHF antenna?

A. He said he had to get ready for the skip DX during the hemmorhoid shower.

Q. A one-armed anti-coder is hanging from a cliff with his one arm. How do you make him fall?
A. Wave.

Q. Why did the anti-coder get fired from the M&M factory?
A. He was throwing out all the W's.

Q. What do you call a skeleton of an anti-coder in the closet?
A. Last year's hide and go seek winner.

Q. Why do anti-coders need to work seven days a week?
A. So you don't have to retrain them on Monday.

Q. Why did the anti-coder keep a coat hanger in the back seat?
A. In case he locks the keys in his car.

Q. Why did the anti-coder get so excited after he finished a jigsaw puzzle in only 6 months?
A. Because on the box it said "From 2-4 years."

An anti-coder walks into a radio store and tells the salesman that he would like to buy that new HF rig over in the corner. The salesman says, "Sorry, we don't sell to anti-coders". He leaves, goes home, puts on a brown wig and sunglasses and goes back to the store and tells the salesman he wants to buy that new rig over in the corner. He says, "Sorry, we don't sell to anti-coders." So again, he goes home, puts on a black wig, sunglasses and a hat and tries to buy the rig again. Again the salesman tells him they don't sell to anti-coders. Finally he asks, "How do you know I'm a anti-coder?" and the salesman replies, "Because that's not a rig, it's a microwave oven."

Q. What is it called when a anti-coder blows in another anti-coder's ear?
A. Data transfer.

Q. An anti-coder ordered a pizza and the clerk asked if he should cut it in six or twelve pieces.
A. "Six, please. I could never eat twelve pieces."

Q. What's the difference between an anti-coder and garbage?
A. Garbage gets taken out at least once a week.

Q. How does an anti-coder spell "farm"?
A. E-I-E-I-O

Q. Why don't anti-coders eat pickles?
A. They can't get their head in the jar.

Q. How do you amuse a anti-coder for hours?
A. Write 'Please turn over' on both sides of a piece of paper.

Did you hear about the anti-coders that were found frozen to death in their car at a drive-in movie theater?
They went to see "Closed for the Winter."

Q. Why did the anti-coder stare at the can of frozen orange juice for two hours?
A. Because the can said "concentrate" on it.

Q. What is the anti-coder doing when he holds his hands tightly over him ears?
A. Trying to hold on to a thought.

Q. How does an anti-coder commit suicide?
A. He gathers his welfare checks into a pile and jumps off.

Q. How do you plant dope?
A. Bury an anti-coder.

Q. How do you make a anti-coder's eyes light up?
A. Shine a flashlight in his ear.

Q. Why do anti-coders hate M&Ms?
A. They're too hard to peel.

Q. How do you keep an anti-coder busy?
A. Give him a bag of M&Ms and tell him to alphabetize them.
Q. Why does it work?
A. Because he'll say, "Does 3 come before E or does it go between M and W?"

Q. What job function does an anti-coder have in an M&M factory?
A. Proofreading.

Q. Why can't an anti-coder make KOOL-AID?
A. Because he can't fit 8 cups of water in the little packet.

Q. What do you call 10 anti-coders at the bottom of the pool?
A. Air bubbles.

Q. What does Star Trek's "Bones" McCoy say before he performs brain surgery on an anti-coder?
A. "Space. The final frontier......".

Q. Why did the anti-coder put ice cubes in the freezer?
A. So he could keep the freezer cold.

Q. How many anti-coders does it take to play Hide and Seek?
A. One.

Q. Why couldn't the anti-coder write the number ELEVEN ?
A. He didn't know which ONE came first.

Q. How did the anti-coder burn his nose?
A. Bobbing for french fries.

Q. How can you tell if an anti-coder's been using the computer?
A. There's saliva all over the keyboard.

Q. How can you tell when a FAX had been sent from an anti-coder?
A. There's a postage stamp on it.

Q. Why does an anti-coder only change a baby's diapers every month?
A. Because it says on it , "Good for up to 20 pounds."

Q. Why do anti-coders write "TGIF" on their shoes?
A. Toes go in first.

Q. Why don't anti-coders make good pharmacists?
A. They can't get the bottle into the typewriter.

Q. What is the difference between an anti-coder and "The Titanic"?
A. They know how many men went down on "The Titanic."

Q. What does an anti-coder say when you ask him if his turn signal is on?
A. "It's on. It's off. It's on. It's off. It's on. It's offï¿½."

Q. What do you call 4 anti-coders lying on the ground?
A. An air mattress.

Q. What do you call 10 anti-coders standing ear to ear?
A. A wind tunnel.

Q. What do you call 15 anti-coders in a circle?
A. A dope ring.

Q. What do you call a zit on a anti-coder's ass?
A. A brain tumor.

Q. How many anti-coders does it take to make chocolate-chip cookies?
A. Ten: One to mix the dough and nine to peel the Smarties.

Q. Why did the anti-coder tip-toe past the medicine cabinet?
A. So he wouldn't wake up the sleeping pills.

Q. Why did the anti-coder drive into the ditch?
A. So he could finally turn the blinker off.

Q. Why did the anti-coder try and steal a police car?
A. He saw "911" on the back and thought it was a Porsche.

Q. Did you hear about the anti-coder skydiver?
A. He missed the Earth.

Q. Where do anti-coders go to meet their relatives?
A. Palm Beach.

Q. How many anti-coders does it take to play tag?
A. One.

Q. What happened to the anti-coder tap dancer?
A. He slipped off and fell down the drain.

Q. What did the anti-coder say when he looked into a box of Cheerios?
A. "Oh look! Donut seeds!"

Q. What did the anti-coder name a zebra?
A. "Spot."

Q. Why can't anti-coders change dial lamps?
A. They keep breaking them with the hammers.

Q. What is the definition of "gross stupidity"?
A. 144 anti-coders.

There was an anti-coder driving down the road listening to the radio.
A ham was telling anti-coder joke after anti-coder joke until the
anti-coder
was mad enough that he turned the radio off. A mile down the road, he
saw
another anti-coder out in a corn field in a boat, rowing. The anti-coder
stopped
his car jumped out and yelled, "You dummy, it's anti-coders like you
that
give us all a bad name. If I could swim I'd come out there and give you

what's coming to you!"

Q. What is the difference between a dead anti-coder in the road, and a
dead skunk in the road?
A. There are skid marks in front of the skunk.

Q. What did the anti-coder say about anti-coder jokes?
A. He said they might offend some Puerto Ricans.

Q. Why can't anti-coders make ice cubes?
A. They always forget the recipe.

A ham was telling an anti-coder joke to someone who happened to be an
anti-coder. Halfway through, the anti-coder interrupts him and says,
"Don't you know I'm an anti-coder?"

"Oh, " the ham replied, "do you want me to start over and talk slower?"

Gad, sounds like cb radio...And I have to get a license for that???
Geez!!!! But really , isn't it ok for people to let off steam once in
a while instead of being old sticks in the mud? You have to admit. It
is great third rate entertainment, and all you have to do is roll over
and turn it on, and turn it off....Good day.

A few years ago I would have argued this point - but not today. Like Bill, I
don't personally know a single local ham who doesn;t at least have some
computer/'Net access.

--

The real problem that I see with not publishing the section news and BoD
minutes is historical. We can look at old QSTs and see what the Board and
sections were doing 10, 20, 50+ years ago. Will the ARRL website still contain
the July 2003 Section News in 2043?

Oh, so you've just had one up your rectum, then?
That's even sicker. And you still haven't addressed your screw up about the
callsigns.

>(SHARES is the FEMA equivalent of RACES)

Where in the world did you pull THAT one out, Phil?

SHARES is a federal joint-agency radio net for the purpose of
intercommunications in the advent of an emergency.

That RACES and SHARES share the word "emergency" in them does NOT mean
they are synonymous or "equivalent" for each other.

No military officer has the authority to "authorize" Amateur operation
where SOFA agreements between the United States and the host country do not
exist.

Your commander may have "authorized" you to operate, but that was in and of
itself illegal.

He didn't say RACES and SHARES are equivalent. He said something to the
effect that RACES is to Amateur Radio as SHARES is to FEMA, i.e. each
an emergency arm of the particular organization.

This coming from the guy that got told to stay off of 75 meters for
calling Wilkey's Wife a whore.

Steve, is the ARRL wrong when they publish the following information? 73,
Brian

Somalia (T5)
At this time to operate in Somolia you would need permission from the United
Nations or your military commander.

There is no IARU-member society.

No problem, Brian. I was very pleased to experience ham radio's amicable spirit abroad. I figured that with so many horror stories and angry threads on the newsgroup(s), this'd be a nice topic to share. I found the CW aspect pretty interesting too. I was unaware that the no-code ticket simply doesn't exist for some nations. Next time, I'll definitely bring along a small CW rig (Gotta build it first.) and a portable dipole.

Not as stupid perhaps if 14.313 once again becomes
the natural magnet for every screwball and fruitkake
that we seem to be so blessed with in this hobby called
ham radio. Let 14.313 become the RF toilettick magnet
that it once was so that all the kooks and crazies from all the
other places on the band can gravitate to. This way the rest of
ham radio is clear and all the nuts are in one place where
Hollingsworth can pick em off like fish in a barrel.

>means a poll like this is useless. It's a joke!

A joke which has a very long history, though.

I think it was the 1932 Hoover-vs.-Roosevelt presidential election, although I could be mistaken about that. Polls conducted by the Republicans indicated they would win, and they were confounded when the Democrats took the White House. Turns out their polling method was to call people on the telephone, never considering the fact that (at the time) the telephone-owning population was not an accurate representation of the voting population.

I think the decision to drop section news and BoD minutes from QST result from the same misguided mindset. But it's no joke.

Also consider this:

The ARRL is a national organization, and its focus is mainly on national and international issues. But many hams' focus is more local or regional - just ask Kim or Ryan, KC8PMX. These hams don't see ARRL membership as offering them very much of interest, because they are much more involved with what's going on in their county or state. Section News was one part of QST that would be of interest to those hams - and removing it from QST makes ARRL membership that much less attractive. Websites, emails and separately-mailed SN are not an adequate replacement.

Jim, you appear to have a certain following on here as well where rational, legitimate discussion is not possible.

To what do you attribute that?

And please describe your morse code/cw sending devices?

Do you use bare wires such as the manager at a very prominent radio laboratory in connecticut?

Or do you have a 17-jewel Rolex-like switch?

Do you have any kind of keyer devices?

Don't count on it. Mr. "Herbie's" return to the air is predicated on his
(as he put it) "learning the
hard way", and that "being off the air was the supreme punishment". When
he gets back on the
air, he'd better behave himself. The Amateur community begged for years for
strict enforcement and the weeding out of those who would make another
lawless "CB" band out of ham radio. Mr
Shoenbaum (sic?) was a a product of the days when FCC didn't really care
about ham and CB.
I would be willing to bet that, if those who were part of that "old" gang
are waiting with bated breath for the "old" days, they are going to be in
for a surprise. Not only Mr. Hollingsworth won't
tolerate such shenanagins again, but the Amateur community as a whole won't
have it either. Things
are changing, and clowns are going to be painting on sad faces in the coming
months.

What person or persons are you referring to, Brian?
>
>To what do you attribute that?

See above.
>
>And please describe your morse code/cw sending devices?

Let's see....

I have:

- Military surplus J-37 straight key. Had this since 1965 - first piece of 'amateur radio' gear I ever owned. Still use it on SKN and for QRS stuff.

- Vibroplex Original, Standard model (gray painted base). Vintage 1974. Got it brand new at the tail end of 1974.

- Vibroplex Champion, Standard model (gray painted base). Vintage 1965. Got it at a hamfest about 1998.

- Vibroplex Original, Standard model (black painted base). Vintage 1999. Got it via email reflector in 2000.

- Vibroplex Lightning Bug, Standard model (gray painted base). Vintage 1972. Got it via eBay in 2002.

I use all of them at various times, but the 1974 Original is my favorite.

>Do you use bare wires such as the manager at a very prominent radio
>laboratory in connecticut?

Not on a regular basis, but I could do so if necessary.
>
>Or do you have a 17-jewel Rolex-like switch?

No jewel bearings at all. No fancy chrome or other plating.

>Do you have any kind of keyer devices?

No keyboards or keyers, except what's built into the Elecraft K2. Most rigs today have a keyer built-in. Decent paddles are not expensive used. I prefer a bug or straight key, but that's just me. I'm considering getting a set of

paddles and learning to send keyer-style left-handed, for increased operating flexibility.

The purpose of RACES is to provide communcations where communications do
not exist. SHARES is a program to provide interoperabiltiy of services.

I don't seen them being "equivalent". Semantics, perhaps.....

Of course, it never occurred to any of the dimbulbs around here that Riley
may be doing just that. What if ol' Riley is giving the license back to
Herb (or whatever his name is) knowing that he will go back to his evil ways
and attract the same old trash. Then, when they are all in a lather on
14.313 or wherever they congregate, Riley can get them all with one grenade.

Equal time requirement......

Q. What do you call a basement full of pro-coders?
A. A whine cellar.

Q. Why did the pro-coder scale the chain-link fence?
A. To see what was on the other side.

Q. What are the worst six years in an pro-coder's life?
A. Third Grade.

Q. Why did the pro-coder smear Preparation H all over his VHF antenna?

A. He said he had to get ready for the skip DX during the hemorrhoid shower.

Q. A one-armed pro-coder is hanging from a cliff with his one arm. How do you make him fall?
A. Wave.

Q. Why did the pro-coder get fired from the M&M factory?
A. He was throwing out all the W's.

Q. What do you call a skeleton of an pro-coder in the closet?
A. Last year's hide and go seek winner.

Q. Why do pro-coders need to work seven days a week?
A. So you don't have to retrain them on Monday.

Q. Why did the pro-coder keep a coat hanger in the back seat?
A. In case he locks the keys in his car.

Q. Why did the pro-coder get so excited after he finished a jigsaw puzzle in only 6 months?
A. Because on the box it said "From 2-4 years."

An pro-coder walks into a radio store and tells the salesman that he would like to buy that new HF rig over in the corner. The salesman says, "Sorry, we don't sell to pro-coders". He leaves, goes home, puts on a brown wig and sunglasses and goes back to the store and tells the salesman he wants to buy that new rig over in the corner. He says, "Sorry, we don't sell to pro-coders." So again, he goes home, puts on a black wig, sunglasses and a hat and tries to buy the rig again. Again the salesman tells him they don't sell to pro-coders. Finally he asks, "How do you know I'm a pro-coder?" and the salesman replies, "Because that's not a rig, it's a microwave oven."

Q. What is it called when a pro-coder blows in another pro-coder's ear?
A. Data transfer.

Q. An pro-coder ordered a pizza and the clerk asked if he should cut it in six or twelve pieces.
A. "Six, please. I could never eat twelve pieces."

Q. What's the difference between an pro-coder and garbage?
A. Garbage gets taken out at least once a week.

Q. How does an pro-coder spell "farm"?
A. E-I-E-I-O

Q. Why don't pro-coders eat pickles?
A. They can't get their head in the jar.

Q. How do you amuse a pro-coder for hours?
A. Write 'Please turn over' on both sides of a piece of paper.

Did you hear about the pro-coders that were found frozen to death in their car at a drive-in movie theater?
They went to see "Closed for the Winter."

Q. Why did the pro-coder stare at the can of frozen orange juice for two hours?
A. Because the can said "concentrate" on it.

Q. What is the pro-coder doing when he holds his hands tightly over him ears?
A. Trying to hold on to a thought.

Q. How does an pro-coder commit suicide?
A. He gathers his welfare checks into a pile and jumps off.

Q. How do you plant dope?
A. Bury an pro-coder.

Q. How do you make a pro-coder's eyes light up?
A. Shine a flashlight in his ear.

Q. Why do pro-coders hate M&Ms?
A. They're too hard to peel.

Q. How do you keep an pro-coder busy?
A. Give him a bag of M&Ms and tell him to alphabetize them.
Q. Why does it work?
A. Because he'll say, "Does 3 come before E or does it go between M and W?"

Q. What job function does an pro-coder have in an M&M factory?
A. Proofreading.

Q. Why can't an pro-coder make KOOL-AID?
A. Because he can't fit 8 cups of water in the little packet.

Q. What do you call 10 pro-coders at the bottom of the pool?
A. Air bubbles.

Q. What does Star Trek's "Bones" McCoy say before he performs brain surgery on an pro-coder?
A. "Space. The final frontier......".

Q. Why did the pro-coder put ice cubes in the freezer?
A. So he could keep the freezer cold.

Q. How many pro-coders does it take to play Hide and Seek?
A. One.

Q. Why couldn't the pro-coder write the number ELEVEN ?
A. He didn't know which ONE came first.

Q. How did the pro-coder burn his nose?
A. Bobbing for french fries.

Q. How can you tell if an pro-coder's been using the computer?
A. There's saliva all over the keyboard.

Q. How can you tell when a FAX had been sent from an pro-coder?
A. There's a postage stamp on it.

Q. Why does an pro-coder only change a baby's diapers every month?
A. Because it says on it , "Good for up to 20 pounds."

Q. Why do pro-coders write "TGIF" on their shoes?
A. Toes go in first.

Q. Why don't pro-coders make good pharmacists?
A. They can't get the bottle into the typewriter.

Q. What is the difference between an pro-coder and "The Titanic"?
A. They know how many men went down on "The Titanic."

Q. What does an pro-coder say when you ask him if his turn signal is on?
A. "It's on. It's off. It's on. It's off. It's on. It's offï¿½."

Q. What do you call 4 pro-coders lying on the ground?
A. An air mattress.

Q. What do you call 10 pro-coders standing ear to ear?
A. A wind tunnel.

Q. What do you call 15 pro-coders in a circle?
A. A dope ring.

Q. What do you call a zit on a pro-coder's ass?
A. A brain tumor.

Q. How many pro-coders does it take to make chocolate-chip cookies?
A. Ten: One to mix the dough and nine to peel the Smarties.

Q. Why did the pro-coder tip-toe past the medicine cabinet?
A. So he wouldn't wake up the sleeping pills.

Q. Why did the pro-coder drive into the ditch?
A. So he could finally turn the blinker off.

Q. Why did the pro-coder try and steal a police car?
A. He saw "911" on the back and thought it was a Porsche.

Q. Did you hear about the pro-coder skydiver?
A. He missed the Earth.

Q. Where do pro-coders go to meet their relatives?
A. Palm Beach.

Q. How many pro-coders does it take to play tag?
A. One.

Q. What happened to the pro-coder tap dancer?
A. He slipped off and fell down the drain.

Q. What did the pro-coder say when he looked into a box of Cheerios?
A. "Oh look! Donut seeds!"

Q. What did the pro-coder name a zebra?
A. "Spot."

Q. Why can't pro-coders change dial lamps?
A. They keep breaking them with the hammers.

Q. What is the definition of "gross stupidity"?
A. 144 pro-coders.

There was an pro-coder driving down the road listening to the radio.
A ham was telling pro-coder joke after pro-coder joke until the
pro-coder
was mad enough that he turned the radio off. A mile down the road, he
saw
another pro-coder out in a corn field in a boat, rowing. The pro-coder
stopped
his car jumped out and yelled, "You dummy, it's pro-coders like you
that
give us all a bad name. If I could swim I'd come out there and give you

what's coming to you!"

Q. What is the difference between a dead pro-coder in the road, and a
dead skunk in the road?
A. There are skid marks in front of the skunk.

Q. What did the pro-coder say about pro-coder jokes?
A. He said they might offend some Puerto Ricans.

Q. Why can't pro-coders make ice cubes?
A. They always forget the recipe.

A ham was telling an pro-coder joke to someone who happened to be an pro-coder. Halfway through, the pro-coder interrupts him and says, "Don't you know I'm an pro-coder?"

"Oh, " the ham replied, "do you want me to start over and talk slower?"

a knuckle sandwich!" But by then the mothership came by and picked him
up. The aliens wanted to learn CW rather than waste time making
crop circles.

Why no crop circles in American farms? 12 gauge shotguns....

Ed..... Can't say that about me.... I may not respond as often as other weeks/months, but I still am lurking even if I don't post. No one here has THAT MUCH power over me to motivate me from ever leaving this or other newsgroups. Even with the few "choice" people we get from time to time, overall I get more from some of the better people here.

Hmmm.. food stamps??? Michigan has given welfare recipients a debit card
that operates like a credit card. I guess that helps them to gain some
dignity. It is called the Bridge Card (i.e. Mackinaw Bridge)

Christ, I work 60+ hours a week, plus on a part-paid fire department, pursue
classes and training and I still can't afford to eat every day.
Unfortunately I live in a very Republicrat community where they expect you
to pay considerable more for rent etc., and do not pay worth a darn. The
same jobs in most other cities that I have held command somewhere between
8-11 dollars, but I am busting my butt to survive at a little over 6 bucks
per hour before so-called benefits and taxes.

At this point welfare is starting to look better and better, fortunately I
have much more pride than that.

Bert, I have the RCI-5054, which I didn't see on that list, and from all of those people I have chatted with on 6 meters, they all have said I have an excellent signal. Even when someone used the CW portion of the rig and made a contact. Nice rich full sounding signal in all modes. 25w cw/ssb and 10w fm/am is all it does too, which the reports I get are surprising based on those figures.

Definitely as that is what I see from a day-to-day prospective. In the past 30 months, we have not had a visit etc. from anyone in the Michigan section or Great Lakes section at our club meetings. (One exception.... someone who did a presentation on something unrelated to the ARRL who happened to be a Section title holder, but did not act or deal with any issues related to that.) Great lakes director Mr. Race has never visited our club within 30 months. (Yes he was invited.)

As far as the ARRL at this point, it is a magazine subscription sold under the ploy of some Mafia like protectionist scheme. Since I must view it this way, any attempts at giving me less as a consumer is cheating me, be it section news or even Minutes etc. At any rate, I am spending more than the subscription rate since I buy it off the newstand.

> > place on the planet?
>
> Don't know. I haven't given them a deposition.
```

That indicates that you don't care about the status of your operation
for DXCC credit. You told us that you are a DXer. A DXer would not so
ambivalent.

> > I believe I wrote "You wouldn't be in a position to know". Ask yourself

> RRAP had told you almost two years earlier but chose to ignore.

I'm reminded that I never operated in band segments not authorized to
me. I don't enforce French amateur radio regulations. I've never
operated in France or in French territories.

> Now I've posted from the ARRL web site the requirements for US military
> personnel to operate amateur radio in Somalia, and you just pick, pick, pick
> away at it.
>
> You're in denial. Whatever Master DXer Dave says is gospel. He can never
> say he was wrong about anything, even when its served up cold.

You haven't served it up cold, hot or stir fried, Brian. What does the
documentation you obtained from your military higher-up say? Let's
see--you were a Tech Plus back in those days weren't you? On what bands
did you operate?

> > > > All my operations over 15 years were accepted for DXCC credit. I have
> > > > written permission from host governments for all of them.
>
> We're not talking about whether YOU had permission. We're talking about MY
> authorization to operate radio from Somalia. Again, what is the address of
> anyone in the Somali government.

You've questioned my DX morality and ethics. I'm comparing mine to
yours. I realize that we're talking about your authorization. How does
it read? As far as the address of anything in Somalia, I have no need
for it. I'm not planning to travel to Somalia.

> > > > I knew that American Embassies don't issue amateur radio licenses.
>
> Who doesn't know that?

You for starters since you brought up the fact that you could visit the
PTT and that the American Embassy was closed. What did the American
Embassy's closure have to do with amateur radio licensing in Somalia?

> > > > I provided information on other operations from Somalia.
>
> So? I used one of those individuals ham radio to operate with.

Great. That should make it even easier for you to contact him to ask
how he did it. Maybe his operation didn't count for DXCC either.

> > > > I suggested that you contact the DXCC desk for info on accepted
> > > > operations.
>
> I'm not worried about it 10 years after the fact.

...a non-DXer's ambivalence.

>
> Despite serving up the ARRL information on the two methods of gaining
> permission to operate from Somalia, you STILL question it.
>
> You're just thick.

Do you think the UN would provide written authorization or just
someone's verbal assurance that it is okay to operate on the amateur
bands?

If you'd really like to stick around to see the laughs, Len, it gets
even sillier when a non-radio amateur sticks his nib in. Your knowledge
of amateur licensing in foreign countries and of the DXCC program is
legend.

Steve,

Why are you surprised and/or dismayed?

Did you REALLY think you would get a scan of what you asked for, and nothing
else? I didn't ask for anything, yet he sent me the same junk. Not even worth
the download time.No big deal, that's what the DELETE function is for.

I don't doubt that certain people here have held various commerical radio
licenses. Do you?

I did ask, Jim, and I thought for once he was sincere. Of course I thought so a couple months ago when I put out that inquiry about a model aircraft I was looking for....remember? His first answer was very civil and helpful, but then in the very next breath he turned on me.

I read some of Lennie's early stuff from five to six years ago in RRAP and other forums and I see the same pattern. At first he was Mr. Encyclopedia, then he's a pit viper ready to strike.

Too bad...I am sure that at one time he could have made some valuable and insightful contributions to Amateur Radio.

>I don't doubt that certain people here have held various commerical radio
>licenses. Do you?

In his case...?!?! Yes, I would have my doubts. But again, it only mattered to me that Lennie offered to do it, then used the invitation as an opportunity to sent the obscene picture in it's stead with the lame "wrong file" story. I think we can all ((wink, wink, nod nod)) believe his story...Uh huh...suuuuuuuuure we do. I know that had it been ME, and with the "history" between us such that it is, I would have checked and then re-checked to make sure it was the right file.

I guess they didn't teach that to Lennie in his "night school" engineering program.

I especially like it when they try to use the card on the last day of the
month and the USDA hasn't plussed up their account yet. Then there is the
arguing, the paging over the grocery store intercom, the irritation...

So I get to wait an extra long time after already working an extra long day.

>Bryan cant you guys be a little original?

Those sound like Blonde jokes, with the word "anti-coder" replacing the word "Blonde".

How about the idea that there was a pro-coder, so obsessed with his code speed that he sacrificed learning other aspects of amateur radio? CWers then to resent the technical skills, rather than aspire to them.
A Ham was so obsessed with CW, he built up his CW skills and compromised his other skills in the process. A CWer, working on code speed that could not fix a simple solder connection so he gave it to his anti-coder buddy to fix. Just an observation.

To non-Ham rf people, CW means an un-modulated carrier (a sine wave at one frequency). To Hams, CW, means "continuous-wave", meaning Morse code, which has an infinite spectrum. I like the Ham definition better. Infinite spectrum = Continuous Wave. Of course other waveforms may also have an infinite spectrum also, such as white noise.

What is a CW filter? Everyone knows English, but not everyone knows code. By transmitting in CW, you act as a CW filter. A CW filter filters out the regular people and lets you find the strange coders.

Contesters that spend too much time at their stations contesting become "fat Hams". Direction finders hone in on a target and become "lean Hams".

That would require his wanting the ARS to survive and flourish. I think he wants exactly the opposite to happen.
>
>>I don't doubt that certain people here have held various commerical radio
>>licenses. Do you?
>

> In his case...?!?! Yes, I would have my doubts.

Why? The commercial license exams weren't very hard. I got the Second Class at the age of 18 with no study at all. IIRC, there was an age requirement back then, too.

Compared to freshman year EE school, the commercial licenses were duck soup. I never went for a First Class ('Phone or 'Telegraph) simply because I had no need of them - and the fees were considerable in the early 1970s.

> But again, it only
>mattered to me that Lennie offered to do it, then used the invitation as an
>opportunity to sent the obscene picture in it's stead with the lame "wrong

Of course it wasn't the "wrong file" - he told me, here, what was in the file he sent.

> I think we can all ((wink, wink, nod nod)) believe his
>story...Uh huh...suuuuuuuuure we do.

Can anyone PROVE otherwise? Of course not.

>I know that had it been ME, and with the "history"

That's YOU.

The whole point of that game was for him to get you upset and ranting here. Then he can cast himself as the good guy and complain to AOL about you.
>
> I guess they didn't teach that to Lennie in his "night school"
>engineering program.

Naw - it's an old kid's game. Kid #1 provokes Kid #2, then when Kid #2 blows his top, Kid #1 cries and complains to Mom that Kid #2 is being mean.

Think about what his REAL goals and motivations are. Getting rid of the code test is just a smokescreen.

Grease the skids as in "I drove to the PTT, filled out an application
and paid the license fee"? You really are beginning to grasp at straws,
Brian. You bring up the fact that the embassy was closed as if it had
some bearing on obtaining an amateur radio license in Somalia. Then you
act as if mentioning the American Embassy was something I did. Now
you've added a sinister comment which is without merit. All of my
operations were accepted for DXCC credit.
I have all of my licenses from various countries. What'd yours from
Somalia say?

Hi Ryan,

There's always been (and likely will always be) a contingent that will tell you that CBs are nothing more than junk, even the high-end ones. (Purely from an equipment perspective.) The HR-2510, Lincoln, RCI-2950, and I suppose the RCI-5054 have long been considered "glorified" CBs by some and hence, junk. I believe the real anger lies in the fact that many of these rigs are used to "freeband" and there apprears to be some animosity over some folks enjoying psuedo-ham hobby-type comms on HF without "earning" the privilege. How some folks can equate working DX in a 5949 Hz sliver of the HF spectrum (In the case of the "freeband.") or on the legal 40 CB channels to "imitating" amateur radio is beyond me...but that's another story for another time.

The truth is that many of these rigs, along with the higher-end CBs, (The Uniden Grant XL or LT, the older Cobra 148 or 2000GTL, and the newer Galaxy DX 2547 come to mind.) do a fine job on SSB. (I don't use AM.) There was once a time when new Novices were encouraged to convert a higher-end CB for 10-meter use. I personally know a chap that used an older Cobra 148GTL on 10-meters with no problems whatsoever. I personally like the Lincoln, which is an updated version of the HR-2510 and received a nice review in QST some years back. Some would like to blame the radio but the bottom line is this, modified or not...it's the individual's responsibility to use the radio coreectly, not misuse it. Take it easy.

> Must have been your charming personality.

So your response is suspicion of my trips to a host country PTT to apply
for a license? Lets see: Step One--Fill out application. Step One
A--choose callsign. Step Two--Pay fee for license. Step Three--Wait for
license to arrive.

The only variation on these steps I ever encountered was in Sierra Leone
where there were certainly host country nationals who were hams. There
I had to be interviewed by an eleven person board which included
representatives of the President's office and the Sierra Leonean
military.

Once again, all of my operations have been accepted for DXCC credit. I have original licenses from all spots in my possession. Tell us what your authorization to operate from Somalia says.

That's one of two venues which the ARRL website says are possibilities.
So, what does it say on the authorization which you received from your
commander?
Which bands (and segments) and modes were you permitted? What power
level was authorized?

One would come to that conclusion based on his history in this NG but
in reality I suspect he's not even remotely concerned abt ham radio
one way or another. He's using tactics which he knows will draw
responses and generating responses, any responses, is his whole life
content completely aside.

And yet..... here we are, feeding the troll, very well indeed. Argument is pretty futile in this case, and a well placed filter takes care of that problem. And I can guarantee that if the troll doesn't get fed, the troll goes to more fertile feeding grounds. This group is what we make of it. Do we want to have it sound like a group of foul mouthed buffoons, or foolishly amateur debaters who pounce on misspellings to try to invalidate another's argument, or a place that might be referenced by the people running the ARS show? It's our collective choice.

Axially, ya got the time/freq Fourier pairs
bass-ackwards for CW. The "infinite spectrum"
is in the time domain (infinite duration
sinusoid) and the pair of impulse-like
functions are in the frequency domain, the
usual place for a "spectrum".

Was this meeting in a government office, a restuarant, or was it at a State Department mixer?

Dave, why would the military have any interest or say in your amateur activities? I understood that up until last Friday, the military has no authority over amateur radio whatsoever. Was your operation in Sierra Leone before or after last Friday?

I've told you. My commander granted me permission. Just like what the ARRL web site states. But maybe, as you've pointed out, since the ARRL spelled it wrong it might not count.

Paul, I hail from central Ohio, and Columbus is one of the fattest cities in America. If being fat made one a good coder, then I'd be one of the best. But, alas, I'm one of the "anti-coders" according to the REAL (tm) Fat and Bald people on RRAP.

Maybe I just haven't lost enough hair yet, but at this rate I might have to comb my mustache back over my forehead.

73, Brian

That's pure Bullshit! No civilian agency of the U.S. government possesses long-range HFDF equipment which can perform to that degree of accuracy, let alone on a steady basis. Much less perform to that degree of accuracy outside CONUS. Now....the U.S. military ....unfortunately I can't discuss that here. You oughtta rein in your bullshit once in a while Phil. There are those of us out here who happen to have experience far beyond yours, in some matters.

All you need is a really good antenna system. Several beams connected
together can be configured easily by any antenna expert. All you need
is a nice big antenna farm. You just set it up in the middle of nowhere
where land is cheap and no CC&Rs. You need a few farms scattered
around the country to do DFing. And it could be set up to be controlled
remotely.

Jake I hate to tell you this but about 100 miles west of where I live the FCC did a better job than that, like a square mile on the open ocean, with German subs in 1940. They put the DF on the cable to come out as Royal Navy Bermuda. I guess Grand Island NE was chosen because it is about the same skip haul as Berlin. This is not rocket science.

Notice how Wiseman never answers the questions asked by
the original poster of this thread, a typical Curtains Boy
"Cut & Run." ALSO notice though, Shebelle never denies
he is the one posting child pornography.

Question for Wiseman:
WHY DO YOU POST CHILD PORNOGRAPHY???????????????

Space left here for Wiseman to cut & run a-g-a-i-n !!!!!!

The board met in the building housing the Sierra Leonean PTT.

> Dave, why would the military have any interest or say in your amateur
> activities? I understood that up until last Friday, the military has no
> authority over amateur radio whatsoever. Was your operation in Sierra Leone
> before or after last Friday?

You know, Brian, I wondered the same thing myself. I also wondered why President Momoh's office sent a delegate. The Sierra Leonean military was not, in any case, issuing verbal okays in a country with no functional government. Their interest in amateur radio permits had to do with permission for a foreign national to operate the amateur bands in their country. My case was not special. All foreign applicants for amateur licenses in Sierra Leone went through the same procedure. I have no idea if Sierra Leonean nationals had to undergo the process. A Norwegian fellow living up country whom I met in the hall before the interview told me that this was his fourth trip.

> > Once again, all of my operations have been accepted for DXCC credit. I

So it is apparent that you have nothing in writing that says you ever had permission from anyone. I'd guess that wouldn't be acceptable for DXCC purposes.

Most people I think miss the real issue on code testing. It is many times easier to pass a test in a subject that you have a real interest in. Most of those people who say they have a hard time learning code are deeply interested in radio, but have about as much interest in operating CW as they might have in watching paint dry. If CW holds even a very faint shred of interest for you, then you will never understand why this particular form of torture shouldn't be visited on those of us who don't. For the record, I eventually passed even 20 wpm, but have never bought a key, and won't anytime soon. N3KIP

In real life, AB8MQ undoubtedly eschews gutter talk in favor of more esoteric and learned discourse with his students. In fact, he probably is mentoring some future Hemingways right now, and is teaching them the novelist's special use of language.

For example, when Margaret Mitchell wrote "Gone With the Wind" in 1936, she had Rhett Butler say all of the wrong things to Scarlett, but AB8MQ's students will get it right. In their version, Rhett will say "I don't give a flying fuck what you do, you skanky, smegmalipped, jizzswallowing whore. You can go down on your brother again for all I care."

After that, the AB8MQ Workshop version will become an MTV movie narrated by Beavis and Butthead.

No, Dave, I have nothing in writing. Is that what is required for the DSCC desk? Does DXCC desk rejection make me a bootlegger taking advantage of some poor country's inability to maintain a soverign state?

As I agree also in regards to operator using it properly. It is kinda like the gun issue. If it was not for the manufacturer mentioned earlier, I would not even be on six meters. Where are the six meter rigs from Yaesu, Kenwood, and Icom, that are NOT FM only rigs?

It may not be the best choice in the world, but for the time being it is the ONLY choice at this point for me to try to enjoy another ham band.

And in real life, Fuckup Shemale Lee actually belives he's an adult.

Find that Marshall County, WV ARES website yet?

"FUCKUP Lee" <SLee@houston-hunks.com> geography idiot and imbecile fucks up
as usual when he thinks Marshall County, Alabama
and Marshall County, West Virginia are the same place in message
<afvsc2$6aa$1@pita.alt.net>:
" Then what is at http://www.geocities.com/skywarncanwarn/ doodle brain?
It sure looks like the Marshall County ARES, and it even has a place to
send email."

Fuckup Lee, unaware of the IRONY of his question, still fails to answer whether
or not he found the Marshall County WV ARES site which he said was
http://www.geocities.com/skywarncanwarn/, a Marshall County, AL ARES website
in <3D4708C2.DD7E8AAB@houston-hunks.com>:
"Are you ever going to answer those questions, or are you going to keep
on running?"

Fuckup Shemale Lee <SLee@Houston-hunks.com> admits he listens to racist broadcasts
and watches the Martha Stewart TV show all in one slobber in:
<message.id.masked@houston-hunks.com>:
"And as that criminal Martha Stewart would say, "That is a good thing."

I agree. If you have any other kind of all-band radio, the Ten-Tec 6M
transverter looks like a ggod way to go.

If you have only 2M FM, it will tranvert to 6M FM, so its still an
inexpensive way to get on.

If only we had a moderator on this newsgroup who might be able to enlighten Roger.

Quite easily. Like Mad Dog Deignan, they borrow a friend's PO Box in Alaska, Hawaii, or a US posession, then when their new call comes in, they send in a 605 and change their address to where they really live.

Oh please, don't educate Curtains Boy. he is easily confused
over things technical, and we like to allow him to continue making
a fool of himself. You see, 2Test (that's AB8MQ) is still trying
to figure out how to calculate RMS voltage and how to get
balanced feed line to not be a "RF Nighmare" inside his tin hovel.
Shebelle (ab8mq) had to retest twice just to get back up to
general class. Riley make him retest twice, a unique distinction
which belongs to Roger and no one else.

AB8MQ = Milquetoast

Check out the Yaesu FT-897 which is about to land on the shelves, does
160 thru 440 *all* modes with decent power output. More specifically
it looks like it will be much better than average HF cw/ssb xcvr than
the usual collection of compact radios like the 706. Ten-tec also has
their 526 6n2 xcvr all-mode xcvr.

I appreciate your attempt to translate my focus in amateur radio, Jim, but quite the contrary. My belief is that the ARRL is of little significance in this area; and I believe it is *BECAUSE* of that, that the ARRL doesn't enjoy the membership that they possibly could--if there was a more focused local effort on ARRL events, activities, etc. Our prior Section Manager, Jim/NZ2T (cannot now remember his call), had weekly Section nets; was incredibly active in the region and didn't sit still for the status quo, as it were.

Remember that ARRL membership is *not* needed or required to become locally active; though the ARRL banner helps with organizations with whom we (the ARRL) have an MOU. Stepping into local action these days, though, wreaks the ire of folks like Larry/K3LT who love to belittle and bemoan what he cannot be a part of--calling people of action names like "wannabes." With folks like Larry around there are few people willing to get in the trenches and put up with it all - merely for a volunteer effort. Even I am sick and tired of being sick and tired of the politics of amateur radio. I've quit the EC position; quit mentoring the ARECC class; quit traffic nets long, long ago; and pretty much have been out of the loop in ham radio for more than a few months now. I'm better off for it.

For those folks who wish to join something that is little more than a try at being something; there is the local (I am speaking of Dallas and Dallas-area stuff around here) organizations. But, if you're in to try and make some changes, try to make something *maybe* better, work hard to try to get something much more than a try going--you'll be shot down by local politics and incestuous little groups of true wannabes.

The ARRL is a grand organization. I think it was probably much grander long ago. We're a different population than we were. What Ryan says is right with regard to the subscription. ARRL membership is desired more for the cute magazine than for anything else. As to Section Notes? Pah! What a joke. The one thing I turn to every issue--other than thumbing through the mag--is the Section Notes. Ya taken a look at the Notes for the North Texas Section the last several issues? Wahoo...what a wealth of info there. It's quite obvious it was last minute and by someone totally disconnected from the Section he is supposed to be serving.

Kim W5TIT

PS--Mafia, Ryan? :) You'll have to enlighten?

Alun:

Any ham who passed a 20-WPM code test and doesn't like or use CW would
not encounter me on-the-air in any case! Problem solved, since it doesn't
exist in the first place! You see, I haven't used HF phone in almost a
decade, and don't think I'll be doing so any time soon! I have had the
experience of being "told off," at length, and in very specific terms, by a
member of the Ten - Ten organization, for not remembering my 10-10
number during a 10-meter phone QSO! On that very day, I unplugged my
microphone, and subsequently lost track of where it is! My HF operating
has been 100% CW/Digital ever since!

Source record: 51126

My opinion/choice is to learn it to meet the requirements set forth by the F.C.C. and no other reason. I will never use it as an operating mode, but am always willing to comply with whatever rules or "jump thru whatever hoops" to get the priviledges afforded by passing the code requirement.

Possibly there would be two reasons why I HATE code: (1) is that it had beaten me for over 12 years, and (2) the type of people and the methods they employ to get their message across. Maybe if the delivery of the alleged benefits were "marketed" better by the pro-coders, maybe more potential/existing hams would enjoy it instead of dreading it.

The same guy posts the same thing roughly ever 4-6 weeks but does absolutely nothing to POSITIVELY support his statement. I am sure he gets the kicks out of posting that when he does due to the ensuing thread that always occurs after.

Maybe if he intelligently responded further instead of posting and then leaving, the statement may actually have some weight. It equates to the same type of mentality of the typical CB'er, which is kind of ironic based on the second line of his post.

Well, it hasn't made me resort to cw but I have had the same
experience on 10, if you don't have one of those stupid numbers a
lot of 10 meter ops just don't want to waste any time talking to
you. It isn't just the 10-10 numbers but they have these silly
numbers for everything they can think up. I have never figured
what is the thrill of collecting a note book full of useless
numbers.

To be fair to award hunters, it's the numbers are not useless...They are the "box tops" you have to submit to get various certificates for different clubs, etc. Not every award hunter is a jerk.

But I will have to state that some of my encounters on 10 meters with TenTen folks was less than entertaining.

Fairly close but there were significant differences between the
writtens for the second phone & telegraph. Just passing the Phone 2
written and the code test did not get ya a Telegraph 2. I took the
Telegraph 2 code test for my Extra and having passed that I figgered
what the hell, it's free so I took a blind poke at the Telegraph 2
writtens and holycow I passed that too. Two tickets for the cost of a
round trip on the El and the Sharon Hill line and most of a (long) day
at the FCC office.

Oh, the irony, Polly, the uneducated washing machine repairman...

Polly, you have the distinction of not taking the General Class test, which you couldn't pass anyways because you were grandfathered from a Conditional Class license. It's all in those old callbooks. Polly/Zitchey has the distinction of getting TWO (2) warning letters from Riley Hollingsworth and also he had to inventory ALL his ham radio equipment. Now mule humper and daughter-diddler George Ashley has made himself scarce on the air. I wonder if Riley told him not to get back on the air in an agreement so Polly wouldn't lose his license, as he was about to.

Towit:
February 7, 2001

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Mr. George A. Ashley
1138 Collierville Arlington Road
Collierville, TN 38017

Subject: Warning Notice: Amateur Radio Station W4FQF

Dear Mr. Ashley:

Information before the Commission indicates that you have engaged in deliberate interference on the 75 Meter Amateur Band (3.901 MHz) at various times since October 2000. Some of the interference included tape recordings. We note that on January 7, 1999 you were warned about such activities on the 20- Meter Amateur Band.

This constitutes a second warning that any further incidents of such operation will result in enforcement action being taken against you, including license revocation, monetary forfeiture, or both.

Section 308(b) of the Communications Act of 1934, as amended, 18 U.S.C. Section 308(b), gives the Commission the authority to obtain information from licensees about the operation of their station. Pursuant to Section 308(b), you are requested to respond to this letter within 20 days of the above date. You are also requested to furnish the following information.

1. Describe the radio transmitting equipment, including antennas, you have at the 1138 Collierville Arlington Road Address. State the manufacturer, model and serial number of each item. If any items were constructed or modified by you, describe the item in detail.

2. Describe any radio transmitting equipment, including antennas, you have at any other address in Tennessee. State the manufacturer, model and serial number of each item. If any items were constructed or modified by you, describe the item in detail.

Please be advised that Congress has made punishable a willfully false response to a letter of this type. See 18 U.S.C. Section 1001.

Sincerely,

W. Riley Hollingsworth

Special Counsel
Enforcement Bureau

So Larry, if we take your example of unplugging your microphone and giving
up an entire mode because of a Ten-Tenner, what can I do to encourage you to
unplug your computer?

Funny you should mention that. I'm not big on VHF/UHF, HOWEVER...I
always thought that 2-meter SSB could make a better "Citizen's" band
than 11 currently does. (Just from an "intended purpose" aspect,
please remain calm.) I've used a President Lincoln along with a
Ten-Tec transverter so I could go SSB. My best friend lives in MD and
it would be a breeze to chat with him using, say, a 6 or 8 element
quad...that you could actually hold in one hand and mount on a TV
antenna mast!

Sounds interesting. I'd always wondered when a major manufacturer
would come out with an all-mode 2-meter rig. I hear that RF Ltd. has
one in the works. We'll see, I guess.

I dunno, Ryan, when I went through all that the "benefits" were
obvious- I got all amateur privileges for my efforts, and I note that it
came no easier to me than anyone else.

As far as the marketing" comment, check the archives to see the extent
of the trashing we took from no coders- FIRST. It's all our fault they
were to __________ (fill in your own descriptives, or let Larry do it)
to do what we did. I just don't feel much of your pain, much less
responsibility for it.

Hans, each nation has the ability to state their prime meridian anywhere they choose. The astronauts, when looking back at the earth have never exclaimed, "Wow, look at those meridian lines." Similarly, the meridians are completely invisible to satellite and aerial photography. It's all arbitrary.

We like to use Greenwich as a standard as we need to do fewer conversion when doing so. Defence mapping gets to convert all the oddball prime meridians to our chosen standard so that we can slam dunk them when the ocassion arises.

Oops, my bad! I meant to say 0 degrees 0' 0" latitude. Sorry for the
brain-fart. I just ordered a Wilderness SST 20-meter QRP CW rig kit.
It'll be fun to build and I don't intend to be caught "flat-footed" on
the next trip. (Mexico next year and back to Ecuador the year after.)
I chose 20-meters as the portable dipole should be more easily
managed. HOWEVER, any suggestions wrt optimal QRP portable CW
operating would be most welcome. I'm using a Koch trainer to work on
improving my code speed. Take care guys. :-)

Kno werries, mait. :-)

BTW, here's the spot where I regretted not having a small portable QRP
setup the most.

Musta been more than 5 years ago. You wanna know about antennas, ask Cecil, he'll give a straight answer.

Some time back N0IMD asked for some antenna info here. He finally got some suggestions and links. Guess who supplied them. Hint: It was one of those terrible Extras with a 1x2 callsign.

There are a few. Think about the commercial interests that would just love to have access to the amateur bands - and not via Part 15 or Part 95, either. That's just one example.

Consider how many posts he has written here, how many unprovoked insults he has spewed and how many errors and mistakes he has denied. Consider his constant

denial of things like public service contributions by the ARS, technical contributions of hams, and demands for unnecessary things like an age requirement for a ham license.

>there are those who can find a reason to hate childhood innoculations, too.

'zactly. Despite all the evidence showing how much good they do.

Just another part of the game, so you'll call him a liar.

>>>I know that had it been ME, and with the "history"
>>>between us such that it is, I would have checked and then re-checked to
>>>make sure it was the right file.

You got it. KB3EIA has the right approach - don't feed the troll.

Hi,

If you want to sell or trade your Ham Radio equipment place a FREE
Clasified on www.RadioAmater.com/kb9k web site.

Thanks
Jovan KB9K

Is this a 6 meter only rig?
Is this a rig under 300-400 dollar range?

If so, then I am interested, otherwise it is out of the range of the average ham.

Never said you had it easier.... And my statement in the first paragraph
applies; I am willing to "jump thru the hoops" in any field of endeavor
including amateur radio, to get the priviledges I wish to enjoy. Again, I
do not have to like it though, and through freedom of speech, I am allowed
to voice that aversion.

> As far as the marketing" comment, check the archives to see the extent
> of the trashing we took from no coders- FIRST. It's all our fault they

> responsibility for it.

So, a newbie who may be a potential morse code user, who has not made a
decision to be a no-coder by opinion, not by license class should be treated
wrongly by the "old boys network" as opposed to becoming one of them? I am
sure there are many nocode techs who may actually like it if some of the
existing hams marketed their "love" better instead of leaving a bad taste in
their mouth for something they may not have been even aware of. (licensure

changes and related issues.)

Again, there may be some of the tech licensure who have not declared an interested in the N.C.I. mindset. But I am sure after meeting/talking to some hams out there, their minds may have changed because of the attitudes that go with some of the "coders." What's that expression, "You can attract more ******* with honey that feces?" (or something like that)
